The Juniper Networks Logo usage guidelines

May 2014
The Juniper Brandmark Assets

Two sets of the Juniper Brandmark Assets have been created. One set is to be used for print applications, and the other set is to be used for screen applications (computer screens, projection applications, TV, etc.). The screen versions have been created as .png files to allow for transparency, and have been adjusted appropriately to prevent colors from being washed out on overly bright screens and projectors. Always be sure to use the correct version for your application.

Print: Positive (blue “Networks”)

Print: Positive (black “Networks”)

Print: Reversed (blue “Networks”)

Print: Reversed (white “Networks”)

Screen: Positive (blue “Networks”)

Screen: Positive (black “Networks”)

Screen: Reversed (blue “Networks”)

Screen: Reversed (white “Networks”)

Two positive print versions of the Juniper Brandmark (blue “Networks”) exist: a CMYK version and a PMS version. The PMS version is preferred wherever possible.

Two reversed print versions of the Juniper Brandmark (with blue “Networks”) exist: a CMYK version and a PMS version. The PMS version is preferred wherever possible.

Juniper Networks Style Guide
Clear Space and Sizing

The following examples illustrate the amount of clear space that should be used when placing the Juniper Brandmark.

Clear space

The Juniper Brandmark must always be used with the prescribed clear space, defined as the width of one letter U. No other elements should be placed within the clear space.

Minimum size

Never use the Juniper Brandmark in print applications smaller than .9” across.
Incorrect Usage

The following examples represent incorrect usage of the Juniper Brandmark and the Junos Brandmark.

Never use Juniper without “Networks”

Never reposition “Networks”

Never alter the scale of “Networks”

Never alter the color of “Networks”
