

Peribit Products Renamed By Juniper Networks

Peribit products renamed/new models after Juniper Networks acquisition

In July 2005 Juniper Networks announced the completion of the acquisition of Peribit Networks. As part of the Peribit integration into Juniper Networks, the existing Peribit SM and SR product platforms have been rebranded to WX and WXC product platforms.

The Peribit SM and SR units in the field will continue to be fully supported by Juniper Networks. The EOL timeline for the units will not begin until such time that the corresponding WX units reach EOL, at which time EOL and last order date information will be announced for the appropriate SM, SR and WX products and the End of Life timeframe starts.

The original SM and SR units sent in for repairs will be replaced with the WX products. The WX units may not be identical to systems originally purchased by Peribit customers. The WX units will be like or an upgrade to those SM and SR units sent in for repair.

Please review the SR and SM to WX (WX stands for WAN Acceleration) conversion information below:

Former Peribit Platform	Juniper Networks Application Acceleration Platforms
SR-15	WX 15
SR-20	WX 20
SR-50	WX 50
SR-55	WX 55 (End of Life announced on August 29, 2005) WX 60 (Replacement platform to the WX 55)
SR-80	WX 80 (End of Life announced on August 29, 2005) WX 100 (Replacement platform to WX 80)
SR-100	WX 100
New	WX Stack

"C" is added to the alpha code to signify Cache and to differentiate from the former **SR** line

SM-250	WXC 250
SM-500	WXC 500
SM-500 Cluster	WXC Stack

Periscope Central Management System (CMS)

WX Central Management System (CMS) Software or WX CMS

Operating Software (OS)

Sequence Reduction System (SRS)

WX operating system software or WXOS

Network Sequence Mirroring (NSM)

Network Sequence Caching (Sequence Caching)
