

## Configuring the Extended DHCP Log Filename

---

By default, the name of the file that records trace output is `jdhcpd`. You can specify a different name by including the `file` option:

To configure the filename for DHCP local server and DHCP relay agent tracing operations:

- Specify the name of the file used for the trace output. (DHCP local server and DHCP relay agent both support the `file` option for the `traceoptions` statement.)

```
[edit system services dhcp-local-server traceoptions]
user@host# set file dhcp_logfile_1
```
