

Configuring a Regular Expression for Extended DHCP Lines to Be Logged

By default, the trace operation output includes all lines relevant to the logged events.

You can refine the output by including regular expressions that will be matched.

To configure regular expressions to be matched:

- Configure the regular expression. (DHCP local server and DHCP relay agent both support the `match` option for the `traceoptions` statement.)

```
[edit system services dhcp-local-server traceoptions]  
user@host# set file dhcp_logfile_1 match regex
```
