

Configuring System Identity for the EX-Series Switch (J-Web Procedure)

To configure identification details for the switch:

1. Select **Configure > System Properties > System Identity**. The System Identity page displays configuration details.
2. To modify the configuration, click **Edit**. Enter information into the System Identity page, as described in Table 1 on page 1.

Table 1: Set Up Configuration Summary

Field	Function	Your Action
Host Name	Defines the hostname of the switching platform.	Type the hostname.
Domain Name	Defines the network or subnetwork that the machine belongs to.	Type the domain name.
Root Password	Sets the root password that user root can use to log in to the switching platform.	Type a plain-text password. The system encrypts the password. NOTE: After a root password has been defined, it is required when you log in to the J-Web user interface or the CLI.
Confirm Root Password	Verifies that the root password has been typed correctly.	Retype the password.
DNS Name Servers	Specifies a DNS server for the switching platform to use to resolve hostnames into addresses.	To add an IP address, click Add . To edit an IP address, click Edit . To delete an IP address, click Delete .
Domain Search	Specifies the domains to be searched.	To add a domain, click Add . To edit a domain click Edit . To delete a domain, click Delete .
