

Intrusion Detection and Prevention Reporter Overview

IDP reports are representations of log data, aggregated and sorted to facilitate network and security analysis. The standalone IDP solution supports both centralized, aggregated reporting through NSM and on-box reporting for a singular IDP device instance through IDP Reporter.

You can perform the following reporting tasks:

- View predefined reports on attacks.
- Generate reports based on criteria you specify
- Create jobs that regularly generate predefined or custom reports and e-mail them to customers or other third-party organizations.

For more information on using IDP Reporter, see the *IDP Reporter User's Guide*.
