

## Configuring Host Checker Automatic Installation (NSM Procedure)

---

You can configure the Infranet Controller to automatically install Host Checker on client computers only for agentless access deployments.

**NOTE:** To install Host Checker, users must have appropriate privileges, as described in the *Client-Side Changes Guide* on the Juniper Networks Support site.

---

To automatically install Host Checker on client computers:

1. In the NSM navigation tree, select **Device Manager > Devices**.
2. Click the **Device Tree** tab, and then double-click the Infranet Controller device for which you want to automatically install Host Checker.
3. Click the **Configuration** tab. In the configuration tree, select **Authentication > Endpoint Security > Host Checker**.
4. From the Settings tab, select the **Auto-upgrade Host Checker** check box.
5. Click one:
  - **OK**—Saves the changes.
  - **Cancel**—Cancels the modifications.
