

Installing NSM

NSM is a software application that enables you to integrate and centralize management of your Juniper Networks environment. You need to install two main software components to run NSM: the NSM management system and the NSM user interface (UI).

The overall process for installing NSM is as follows:

- Management System Installation Process
- User Interface Installation Process

Refer to the *Network Security Manager Installation Guide* for details on the steps to install the NSM management system on a single server or on separate servers. It also includes information on how to install and run the NSM user interface. The *Network Security Manager Installation Guide* is intended for IT administrators responsible for the installation of or upgrade to NSM.
