

## **Adding J Series Services Routers or SRX Series Services Gateways in NSM Overview**

---

Before NSM can manage devices, you must first add those devices to the management system using the NSM UI. To add a device, you create an object in the UI that represents the physical device, and then create a connection between the UI object and the physical device so that their information is linked. When you make a change to the UI device object, you can push that information to the real device so the two remain synchronized. You can add a single device at a time or add multiple devices all at once.

For complete details on adding J Series Services Routers or SRX Series services gateways, see the *Network and Security Manager Administration Guide*.
