

Configuring Instance Import (NSM Procedure)

You can apply one or more policies to routes being imported into a routing instance.

To configure instance import in NSM:

1. In the navigation tree, select **Device Manager > Devices** .
2. In the **Devices** list, double click the device to select it.
3. Click the **Configuration** tab.
4. In the configuration tree, expand **Routing Options**.
5. Select **Instance Import** and specify the import policies to be applied to the routes that are imported to a routing instance.
6. Click one:
 - **OK**—To save the changes.
 - **Cancel**—To cancel the modifications.
 - **Apply**—To apply the routing option settings.

NOTE: After you make changes to a device configuration, you must push that updated device configuration to the physical security device for those changes to take effect. You can update multiple devices at one time. See the *Updating Devices* section in the *Network and Security Manager Administration Guide* for more information.
