

Configuring a BGP Export Policy Condition (NSM Procedure)

You can define a routing policy condition based on the existence of routes in specific tables for use in a BGP export policy.

To configure condition in NSM:

1. In the navigation tree, select **Device Manager > Devices**.
2. In the **Devices** list, double-click the device to select it.
3. Click the **Configuration** tab.
4. In the configuration tree, expand **Policy Options**.
5. Select **Condition**.
6. Add or modify the parameters as specified in Table 1.
7. Click one:
 - **OK**—To save the changes.
 - **Cancel**—To cancel the modifications.
 - **Apply** — To apply the protocol settings.

NOTE: After you make changes to a device configuration, you must push that updated device configuration to the physical security device for those changes to take effect. You can update multiple devices at one time. See the *Updating Devices* section in the *Network and Security Manager Administration Guide* for more information.

Table 1: Condition Configuration Details

Option	Function	Your Action
Name	Specifies the name of the condition.	Enter a name.
Comment	Specifies the comment for the condition.	Enter a comment.

Table 1: Condition Configuration Details (continued)

Option	Function	Your Action
Route Active On	Enables you to specify the policy condition based on the existing routes and the corresponding route tables.	<ol style="list-style-type: none">1. Select Route Active On.2. Select one:<ul style="list-style-type: none">■ None—No policy condition based on routes need to be specified.■ if-route-exists—Specify the policy condition based on the routes. Enter the comment, route and the corresponding routing table.3. Click OK.
