

MX480 Router Grounding Cable Specifications

The grounding cable that you provide must meet the specifications in Table 1.

Table 1: Grounding Cable Specifications

Cable Type	Quantity and Specification
Grounding	One 6-AWG (13.3 mm ²), minimum 60°C wire, or as required by the local code

WARNING: The router is pluggable type A equipment installed in a restricted-access location. It has a separate protective earthing terminal (sized for UNC 1/4-20 ground lugs) provided on the chassis in addition to the grounding pin of the power supply cord. This separate protective earthing terminal must be permanently connected to earth.
