

# Addendum to the Steel-Belted Radius Carrier Installation Guide and Release Notes

The memory requirements for a Steel-Belted Radius Carrier server chassis, stated in the *Steel-Belted Radius Carrier Installation Guide*, have been revised.

The revised requirement is:

## **Recommended Configuration**

- Four Gb RAM or more.

## **Minimum Configuration**

- Two Gb RAM.  
If the WiMAX or SIM module, or an SS7 communications interface is installed, the Ulticom Signalware communications stack is used. To support the stack more effectively and for better performance on all systems, more memory is recommended.
