

Juniper Networks NetScreen Secure Access Release Notes

IVE Platform version 4.2R8.1 Build # 10625

This is an incremental release notes describing the changes made from 4.2GA release to 4.2R8.1. The 4.2GA release notes still apply except for the changes mentioned in this document. Please refer to 4.2GA release notes for the complete version.

Known Issues/Limitations Fixed in 4.2R8 Release

The following list enumerates known issues which were fixed in this release

1. Security - Fixed a security issue with some parameters of our ActiveX.

Known Issues/Limitations Fixed in 4.2R8 Release

The following list enumerates known issues which were fixed in this release

1. Performance - Custom sign-in page blob no longer gets updated multiple times when user visits the sign-in page. (26671)

Known Issues/Limitations Fixed in 4.2R7.1 Release

The following list enumerates known issues which were fixed in this release:

1. System - Resolved an issue with cache server and file descriptors (30021)
2. System - Resolved an issue with SNMP and file descriptors (31610)
3. System - Optimizations made for IVE Memory utilization (26848)

Known Issues/Limitations Fixed in 4.2R6 Release

The following list enumerates known issues which were fixed in this release:

1. Citrix Load Balancing is now supported using http browse address parameter in the ICA file. Citrix supports a load balancing mechanism between the servers in the farm to determine the desired server based on the load conditions and redirect the connection to appropriate server.
IVE now has the capability to recognize the http browse parameter and forward the request to the appropriate Browser Server. It then redirects the Citrix traffic to the server specified by the Browser Server.

Note:

- a. Installing older version of Juniper Citrix Client Services as Administrator and then upgrading as non-administrator and vice versa will not work. If a user has installed Juniper Citrix Client Services as Administrator, it has to be upgraded to the latest version as Administrator.
 - b. Citrix Load Balancing does not work on Windows 98.
 - c. Citrix Load Balancing using only http browse address specified in the ICA file is supported. All load balancing or other functionality provided by the nfuse server may not be available using the winterm services solution
2. Resolved an issue with User Log Filter, where saving logs after applying a filter will save logs related to the query and not the entire log. (23409)
 3. Resolved couple of issues with AD server authentication related to failing over to backup domain controller when primary domain controller is down or not-reachable. (28007)
 4. Resolved an issue where server catalogue lookup fails when backup domain controller is configured and primary domain controller is down or not-reachable. (28007). (26500)
 5. Fixes a logging issue in user access logs when logging client machine ip-addresses. (26652)
 6. Resolved a rewriter issue for accessing Siebel. (29142)
 7. Resolved an issue of inconsistency between User Statistics Graph and Logs->Statistics data. (26984)
 8. Resolved various UI issues in Citrix Desktop Terminal Services like blurred images and incomplete taskbar. (29146)
 9. Fixed an issue of NC application error during launch of NC on some clients. (28085)

Known Issues/Limitations Fixed in 4.2R5 Release

The following list enumerates known issues which were fixed in this release:

1. Custom expression comparisons now support the formats "sourceIP = anyStringVariable", "sourceIP = sourceIP", "sourceIP != anyStringVariable" and "sourceIP != sourceIP".
The "anyStringVariable" can contain one or more strings each with one of the following formats:
1.2.3.4
1.2.3.0/24
1.2.3.0/255.255.255.0
The variable can also contain any combination of the above formats. For example, given an ldap attribute srcIp with two values:
srcIp 10.11.83.2
srcIp 10.64.0.0/16

In addition the following expression is also supported:
sourceIP = userAttr.srcIP

If the variable value format is incorrect, then the expression fails at runtime and an error will be generated in the policy trace. (27456)
2. Resolved an issue of a Chat applet not working through rewriter. This issue is fixed with SunJVM and still exists with msjvm (23703)
3. Windows task bar not displaying for Citrix terminal session through ive for certain configurations has been resolved. (27367)
4. Disabling ssl acceleration will now disable hardware acceleration for backend SSL and LDAPS connections. (28101, 27569)
5. When using SiteMinder authentication with WSAM as access method, after logout clicking on sign in will present the login page. (27432)
6. Fixed a Japanese translation typo in the password change page. (24459)
7. Fixed a JavaScript error with Lotus iNotes when using Netscape 7.2 browser. (27254)
8. A minor rewrite error for an internal website has been fixed. (27665)
9. Fixed an issue with Custom sign-in pages when Primary and Secondary auth servers are enabled. (27772)
10. Reordered the ciphers that IVE negotiates with an LDAPS server to resolve an issue with Novell eDirectory. (25633)
11. Resolved an issue with Java Applet rewriting for SmartReview WebApps. (27352)
12. Resolved issues with multisite clustering and enhanced debugging for clustering. (28000)
13. Fixed an rewriting issue with the Siebel Application. (25795)

14. Fixed an issue with an internal website taking too long to load through rewriter. (23357)
15. Resolved an issue with DMS service not working through wsam. (23642)

Known Issues/Limitations Fixed in 4.2R4 Release

The following list enumerates known issues which were fixed in this release:

16. Fixed an issue where JoinDomain using LDAP calls fails and then the fallback to using RPC calls also fail with the "NT_STATUS_INVALID_USERNMAE" error. (26595)
17. Fixed an issue with copying & pasting of files from the remote drive to the local drive, when the "ConnectLocal Drives" option is enabled is fixed. (26558)
18. Few Sharepoint related issues have been fixed. (26266)
19. Issue with the HostChecker needing Admin rights for checksums to work is fixed. Buffer size has been increased to accept more than 7 values of MD5 checksum in HC. (26258, 25810)
20. Fixed an issue with rewrite and download of Citrix JICA applet (Version 8.2). (26085)
21. After May 7, 2005, Sun JVM users that launch JSAM, Secure Meeting on Mac/Linux or use adaptive Java delivery on IVE versions 4.1.1 and 4.2 (including all maintenance releases), may see a browser warning that indicates that the certificate has expired or is not valid. If the user clicks "Yes", the user can continue without a problem. In this release, the code signing certificate has been renewed and therefore users will not see the warning.

Note that MS JVM and ActiveX users will not see this warning. This is because Windows performs an extra check to determine validity; the code is considered trusted if the date that the code was digitally signed falls within the valid date range of the certificate. (26176)

22. Fixed issues where the Citrix Terminal Services full screen mode or any resolution mode was causing the taskbar to disappear from the screen. (25580, 26093)
23. Fixed an issue in Secure Meeting, when search for users in AD server is done by search by username only. (26236)
24. Fixed the wrong version number in the file PleaseWait.html in the Custom-Sign-In Pages. (25927)
25. Resolved a rewrite issue with Onyx Web CRM application. (25302)
26. Fixed an issue in cache server when a very large object is stored in the cache. (24406)
27. Added an option to load a Citrix Client installable from the local user system. (23974)
28. Fixed an issue with accessing an internal website, when WSAM is running. (23737)
29. Fixed the issue of NC timing out, when persistent cookie option is enabled for squid proxy users. (23407)
30. Resolved a rewrite issue with an intranet website. (24270)

31. Made a change in the creation of PAC file, when external proxy is present for NC. (25383)
32. The username/password combination used to login into the IVE is sent as is to the end-application, when SSO is enabled. (25525)
33. Fixed some issues with Password Management for iPlanet. (25576, 26149)
34. Resolved a rewrite issue, for downloading of files using Lotus QuickPlace. (26011)
10. Fixed an issue with the rewriter to prevent leakage of information. (24788)
1. Resolved a rewriter issue for login into Omega Portal.
2. Fixed some issues in rewriter. (26170, 26229, 26230, 26231, 26233, 26237, 26254, 26321, 26520, 26553)
3. Fixed an issue in JSAM to return the page back to the "Bookmarks" instead of the "Please Wait" page. (26238)
4. Fixed an issue with SAML SSO / Access Control. (26242)
5. Resolved an issue with the mapping of Arrow keys in the vi editor when Putty is used via Secure Meeting Presentation. (26243)
6. An assertion error is fixed. (26245)
7. Problem with downloading .doc and .xls files in Pocket PC, through rewriter is fixed. (26247)
8. Username in caps can also be created using IVE admin. (26248)
9. Fixed some issues with OWA through rewriter. (26249)
10. Fixed an issue with redirection to another server through rewriter. (26257)
11. Issues with STA on Mac OS fixed. (26263)
12. Fix for buffer overrun attack with a malicious telnet server is added. (26338)
13. Date format changed in the Secure Meeting invites. (26550)
14. Fixed the HTTP connection timeout issue with core web access. (26552)
15. Fixed a Safari issue on Mac OS. (26554)
16. Resolved rewriter issues while accessing specific applications. (26606, 26614)

17. Resolved a random freeze issue where users are unable to login for some time. This issue has manifested only when we have HC/CC enabled (27215)
18. SSL backend ciphers have been reordered in order to handle LDAPS and backend SSL site issues with some ciphers. RC4 moved ahead of the list.(25633)

Known Issues/Limitations Fixed in 4.2R3 Release

The following list enumerates known issues which were fixed in this release:

1. Fixed a rewrite issue for blank URL. (24655)
2. Resolved an issue of private network traffic getting routed through IVE sometimes. (23861)
3. Fixed a rewrite issue with AutoVue applet. (23904)
4. Resolved a rewrite issue with CDR application. (24358)
5. Fixed a rewrite issue with "Hummingbird" Enterprise Content Management application. (24704)
6. Resolved an issue on a weblink in the admin page of the IVE. (24594)
7. Fixed an issue with the HostChecker, when ActiveX is disabled and Java is not installed on the client browser. (24822)
8. Resolved rewriter issues for specific applications. (24200, 23543, 24240, 24950, 24730, 24712, 24705, 25010, 25402, 25438, 25280)
9. Fixed an issue of moving of columns of a web application when going through the rewriter. (25439)
10. Fixed a rewriting issue with wise search application (23784)
11. Fixed a user admin issue, by changing a conflicting filename to a different name. (25424)
12. Resolved a display issue in the JSAM window. (25443)
13. Resolved JavaScript errors while accessing specific applications through the rewriter. (24959, 25304, 25302, 25301, 24837)
14. Fixed a JavaScript navigation error in a SAP enterprise portal. (24726)
15. Fixed a JavaScript error while accessing a specific application when the Framed toolbar is enabled. (25300)

- 16.Fixed a rewrite issue with file attachments. (25278)
- 17.A rewrite filter is provided to fix an issue with CDR Application.
(25252)
- 18.Fixed an issue with NC not getting installed, even when the user
is the administrator. (25250)
- 19.Fixed an issue with the HostChecker not merging the roles, after
the HC policy is re-evaluated. (25233)
- 20.Fixed an issue when using the custom sign-in page, with the
CacheCleaner enforced at the realm. (25222)
- 21.Fixed the issue where the conductor is unable to bring up a
secure meeting and share applications. (24751, 24962)
- 22.Fixed the problem of varying font sizes when going through PTP.
(24958)
- 23.Fixed the issue of the links not working when defined in the
personalized greeting in the UI for a role. (24956)
- 24.When a secure meeting is setup using the Outlook Plug-in, the
user is no longer directed back to the IVE for authentication.
(24948)
- 25.When the user logs off from an application in WTS, no message
pops-up. (24823)
- 26.Fixed an issue with the OWA. (24815)
- 27.Fixed an issue with the rewriter to prevent leakage of
information. (24788)
- 28.Fixed an issue in the rewriter when backend server and the IVE
have same hostname. (24771)
- 29.Paranext applet now displays properly through the rewriter.
(24713)
- 30.Resolved an issue with file upload. (25486)
- 31.Resolved a compatibility issue of an UDP based application RMS
with WSAM.(25446)
- 32.Fixed a problem with Spanish translation in WSAM. (25444)
- 33.Fixed an issue with clearing of the registry entries by JSAM.
(25442)
- 34.Resolved an issue with Host Checker and the Japanese locale.
(25441).
- 35.Added support to allow Critical Policies in Client Certs/RootCAs
- (25435)
- 36.Resolved an upgrade issue. (25430)

37. Fixes an issue with the certificate. (25299)
38. Fixed an issue with the OWA preview panel showing IV9E login. (25024)
39. Fixes an issue of critical errors logged in the events log page. (24968)
40. Fixed an issue in the encryption of the System Snapshot. 24965)
41. Fixes an issue of file sharing on the local PC. (24961)
42. Fixed an issue with downloading of temporary statedumps. (24957)
43. Fixed several issues with HC and CC policy re-evaluation. (24955)
44. JSAM now handles multiple spaces in a windows user name. (24954)
45. Resolved an issue with SAP HTTPS Portal. (24952)
46. Fixed an issue with Secure Meeting and Outlook. (24951)
47. Resolved an issue with backend SSL sites negotiating anonymous ciphers (24949)
48. Fixed an issue with email proxy. (24382)
49. Resolved a display issue with Windows Terminal Services. (24360)
50. Changed the install/uninstall path to %temp%/NC. (24354)
51. Fixed an issue with NC ACL's. (24296)
52. Support windows files resource policies which use variables such as <userAttr.value> (24277)
53. Fixed an issue with Email Client for caching of password. (24237)
54. Fixed an issue in JSAM and merging of roles. (24096)
55. Fixed an issue with certificates (23713)
56. Enhanced proxy support in 4.2 NC (23265)

Known Issues/Limitations Fixed in 4.2R2 Release

The following list enumerates known issues which were fixed in this release:

1. VBScript Error with an ERP application is resolved. (24078)
2. Resolved a rewrite issue with specific web application (22929) (23816)

3. Fixed an issue where opening file through local PC is not working while going through a rewritten applet. (23530)
4. Fixed a rewrite issue with a web application on pocketPC (24003)
5. Fixed an iNotes webmail issue with firefox browser (24126)
6. Fixed an issue with opening mail attachments for a specific customer environment. (24170)
7. Fixed a JavaScript error for SAP custom module going through IVE (23690) (22389)
8. Fixed an issue of URL not being rewritten with MatrixOne Application (23480)
9. Fixed an activeX control issue for a specific application (23778)
10. Fixed a rewriting issue with wise search application (23784)
11. Fixed a rewriting issue with a custom SAP application (22389)
12. Fixed a rewriting issue with Magic Web Application (23761)
13. "Terminal Sessions" has been changed to "Telnet/SSH" on user UI (22913)
14. WSAM message pop-ups showing garbled characters on win98 and win2k Japanese OS (23344)
15. Fixed an NC server side issue and intermittent user disconnect errors. (23702) (23803) (23528)
16. Fixed password change using Native AD and LDAPS option (23339)
17. Fixed an issue where Annotation causes Secure Meeting Manager window to mangle on Presenter's desktop (23847)
18. Added support for more activeX controls for Siebel (24093)
19. Resolved a Web rewrite issue with file attachment (23887)
20. Added support to select protocol Kerberos only, NTLMv2 or NTLMv1 for AD authentication (23458)
21. Resolved a meeting client issue when trying to join meeting. (21838)
22. Fixed an iNotes issue through rewriter. (22932) (23885)
23. Fixed an intermittent secure meeting disconnect issue. (23164)
24. Fixed an error on a web page through rewrite. (23137)
25. Fixed a minor problem with Read only administrators (21362)

26. Resolved an issue with attachments on OWA. (23252)
27. Resolved an error caused when password change fails for user with policy tracing enabled. (23591)
28. Resolved an display issue with a Web Application via rewriter (23524)
29. Resolved the issue where at times Session Timeout reminder appears two times. (23272)
30. Changed error message for failed user authentication (22993)
31. Fixed the issue of users email session settings getting erased. (23990)
32. Added support for new activeX control of new version of Imanage. (23199)
33. Fixed Spanish translation issue in Secure Meeting and WSAM(23953) (23952)
34. Fixes a clustering issue where the external interface goes down under certain circumstances. (23464)
35. Changed Documentation with regards to native support for the IBM 3270 emulation. (23566)
36. Resolved a rewriting issue with JWALK, a Java Applet based Application (20246)
37. SNMP get now returns a value for meeting user count (20635)
38. Fixed a font display issue with PTP for a particular application. (21054)
39. Host Checker Policy works when MD5 value is specified. (22994)
40. Fixes an incorrect interpretation of a function through rewrite (23155)
41. Secure Meeting notification issue resolved (23157)
42. VBScript error for excel-query fixed (23292)
43. Issue with web-rewrite on Innovate21 Application (23342)
44. Active-x issue with a Web application component resolved (23456)
45. Fixed web server issues. (23531) (23662)

46. Issues with CDR web application resolved. (23681)
47. After the user signs in, the background color in meeting URL page, can be changed from the Meeting Sign In Page (23740)
48. Meeting preferences will not be visible to end user if role does not have meeting. (23808)
49. Fixes a JavaScript error for a specific page. (23816)
50. Instant meetings email invitations send out with correct time. (23858)
51. Fixed an issue where meeting Conductor information was not specified in the email notification (23879)
52. Resolved an issue with Jinitiator in Forms Listener Servlet mode over PTP (23664)
53. Fixed ordering of realms on the default sign-in page (23876)
54. The NC client does not display messages properly in Spanish Language (23762)
55. Issue with Siebel CRM system through rewrite resolved (22530)
56. Able to add a static route where the destination network is x.x.127.0. (23691)
57. Clicking Help now brings the already open window to the foreground. (23646)
58. Made minor improvements to the meeting conductor and user interface (23596)
59. Fixed proxying Siteminder response attribute to achieve SSO with backend servers through the IVE. (23559)
60. Resolved a rewriting issue with ChangePoint application (23369)
61. Fixed the issue where IManage gave a popup with HTML text upon logon (23382)
62. Resolved an issue where redirection to another server in same domain prompted for credentials. (23268)
63. The option of multi-cast protocol in multi-node cluster is now preserved after a cluster-wide upgrade or down-grade (23029)
64. Added File Browsing support for Enum3 (15157)
65. The option to deliver the Citrix ActiveX client from the IVE for the Citrix Terminal Services feature is no longer available. Instead the default delivery option has been changed to "Download from the Citrix web site". It is important to note that in order for this option to work, the IVE must be able to access the

Citrix web site. Also note that end-users that have already accessed Citrix Terminal Services in 4.2 will not be affected. (23831) (24138)

66. With Split tunneling disabled, we will support Network Connect only when there is a manual client-side proxy between the client and the IVE, and then a manual server-side proxy (defined on the Juniper SSL VPN) that the client has to traverse to get to the internal applications/Intranet/Internet. Again, to re-iterate, this qualification only applies when two proxies are enabled at the same time, one on the browser that is accessing the IVE and the other on the IVE protecting access to internal resources. (23265)

67. Fixed a JavaScript issue for a web application through rewriter. (24444)

68. Fixed an issue of IVE being unresponsive on accessing lot of SSL backend sites through rewriter. (24570)

Changes for Upgrade from IVE 4.2 to 4.2R2:

Citrix Terminal Services

The default option for the Citrix Client Delivery Method has changed.

The option to deliver the Citrix client from the IVE is no longer available. After the upgrade from 4.2 to 4.2R2, if the option under Roles -> Terminal Services -> Options -> Citrix Client Delivery Method were set to "Download from the IVE", it will be changed to "Download from Citrix web site". It is important to note that in order for the new option to work, the IVE must be able to access the Citrix web site,

http://download2.citrix.com/files/en/products/client/ica/current/wfi_cat.cab. Also note that end-users that have already accessed Citrix Terminal Services in 4.2 will not be affected.

Meeting License

LDAP & Outlook features Included in base Meeting license: If they are using Release 4.2 or 4.2R1 and if they have one of the following upgrade licenses for the Secure Access series:

- NS-SA-UPG-M10
- NS-SA-UPG-M25
- NS-SA-UPG-M50
- NS-SA-UPG-M100

then they do need the "Advanced Meeting" license to utilize the "Secure Meeting Support for Outlook Integration" and "Secure Meeting

LDAP Integration" features.

With 4.2R2, and based on change number 24164, the "Advanced Meeting" features will be included in the base license. Customer can be instructed to download Release 4.2R2 or later as an alternative to getting the new license. With this change and an upgrade to 4.2 R2, any customers with a SM upgrade will automatically see LDAP & Outlook features. Those who already have an Advanced Meeting upgrade, will continue to see LDAP & Outlook features. This change does not affect the Meeting Appliance where users already have access to LDAP & Outlook features.

Known Issues/Limitations Fixed in 4.2R1 Release

The following list enumerates known issues which were fixed in this release:

1. Removed dots from IVE name for joining AD domain. (23724,23722)
2. Added the option to select authentication protocol between the IVE and the server. Options are available to choose between Kerberos only (most secure), Try Kerberos, fall back to NTLM v2 (moderately secure), Try Kerberos, fall back to NTLM V2 or NTLM V1 (less secure) (23458)
3. Certificate check for purpose of cert reports warning rather than error(23615)
4. Fixed some issues with cache cleaner. (23611,23293,23097)
5. Fixed an error with CRL download (23601)
6. SAM Intermediate page now redirects to custom sign-in page instead of the default index page. (23298)
7. Kiosk template for custom sign in now contains "?" character (23297)
8. Fixed a browser hang issue when CC and HC are both enabled, and the user is "Restricted". (23612)
9. Fixed a browser hang issue with Host Checker via Java Delivery using MS JVM. (23373)
10. Host Checker now does not loop on starting if Login Inactivity Timeout set to 0. (23134)
11. Fixed an incorrect error message for HC. (23005)
12. Fixed an issue with LDAP Nested Group Lookup. (23251)
13. Nested Group Lookup now has the capability to do lookup based on server catalogue entries and also automatically. (22502)
14. Netegrity issue with proxying SMSession to SiteMinder enabled application to achieve SSO through the IVE is

- addressed. (23559)
- 15.Fixed Password Management for secondary auth server. (21869)
 - 16.Fixed an issue where IVE was sending LDAP Filter as samaccountname=<USERNAME> instead of the actual user name. (23483)
 - 17.Fixed the issue where password change using eDirectory as an LDAP server sets incorrect expiration date for the new password. (23433)
 - 18.We now use SAMR protocol as primary and fallback to LANMAN for Password Management. (20638)
 - 19.Fixed a server error in file browsing.(23437)
 - 20.Cluster node selector now updates when node is selected (16894)
 - 21.Fixed an issue where reminder warning pops up shows up even if the session is being actively used via Citrix (23504)
 - 22.Fixed an issue with the loopback IP addresses for J-SAM on Red Hat for non-root users. (23432)
 - 23.Fixed an NC setup error with many PPP connections present (23249)
 - 24.Fixed the issue where if the client side static proxy is configured with host name, the PAC created by NC will not contain the proxy port (23184)
 - 25.Fixed an issue where NC users cannot access IVE external port subnet resources (21832)
 - 26.Two users connected to NC now can reach each other if the ACLs allow it. (22798)
 - 27.Fixed an issue where the first entry in WSAM application was getting replaced when making changes to an existing entry.(23393)
 - 28.Fixed the error return code for Scriptable WSAM when another LSP is present. (18826)
 - 29.Fixed an issue where NSP goes into loop on Winxp sp2 when we do a DNS query.(20849)
 - 30.W-SAM now launches when windows login name is Japanese .(20847)
 - 31.The link on the intermediate page during launching SAM now goes to the SAM page.(19727)
 - 32.Fixed an issue where archiving sometimes causes logging to stop.(23099,23093)
 - 33.Addressed several issues that were causing error messages to appear in the log. (19794, 23531)
 - 34.Fixed an issue with FTP archiving that impacted user

- and admin log entries. (23193)
- 35.Fixed an issue within Secure Terminal that related to sending F11-F12, using Shift+<key> combination within Secure Terminal. (20231)
 - 36.Fixed an issue with a Customized Citrix published application not working through Embedded Citrix Terminal services (23365)
 - 37.Addressed a Web policy display problem when the policy entered exceeds approximately 16.1K. (22266)
 - 38.Fixed an issue with Comodo certificates(23311)
 39. Fixed a typo in Reminder time message in Japanese(23449, 18608)
 - 40.Re-added two MIBs to SNMP.(23416)
