Issues Fixed in ESAP1.5.4:

OPSWAT:

1. Host Check failing when Virus Definition Files should be latest is enabled - PC Tools AV 2009 (464470)
2. McAfee VirusScan Enterprise version 7.1.x and 8.0.x failing with Error Not Installed (467504, 468061)
3. Symantec Antivirus 10.x returning incorrect FSRTP status (467640)
4. ESET NOD32 AntiVirus and ESET Smart Security 3.x requiring windows security center for IsFileSystemProtectionStatusEnforced(FSRTP) status (469125)
5. Ad-Aware SE Professional 1.x not getting detected by HostChecker (469798)

Shavlik:

No Shavlik fixes are included.

Known Issues/Limitations in ESAP1.5.4:**OPSWAT:**

- 1 . When Host Checker checks for on/off status of McAfee Personal Firewall 9.x, 10.x, it opens and closes the McAfee UI.

Workaround:

Disable rule-monitoring if it is enabled. This way the UI pops up only during HC updates.

To avoid appearing of the UI do the following:

Create a text file called doSilent.txt containing ('1'), and place it in the same directory as FWManager.dll (HC folder). For this to work Windows Security Center must be available.

- 2 . AV Check fails for Norton 360 v2 with UAC Enabled on Vista. (386088)
- 3 . The Anti-Virus Check for Norton Internet Security 2009 (v16) and Norton Antivirus 2009 will not be correct on a non-XP-32bit machine with security centre disabled.

Workaround:

If the security center service is disabled and you are on a Non-XP 32 bit machine it is required that the "Early Load" of the Auto-Protect feature be enabled. This feature can be enabled by opening the Antivirus or Internet Security Options, selecting the Real-Time Protection tab, and under Auto-Protect, you will find "Early Load".
