Recent Release History

The following table summarizes the features and resolved issues in recent releases. You can use this table to help you decide to update the IDP detector engine version in your deployment.

Table 1: IDP Detector Engine Features and Resolved Issues by Release

Release Date	Detector Engine Version	Features and Resolved Issues
May 28, 2009	■ 5.0.110090504	Update to improve SIP decoder stability.
May 12, 2009	■ 10.2.140090426	Resolved an issue with LDAP and TNS decoders.
April 27, 2009	■ 3.1.125133	Quarterly update, including stability improvements and improved accuracy.
April 15, 2009	<ul style="list-style-type: none"> ■ 10.2.140090407 ■ 4.2.110090322 ■ 4.1.110090407 ■ 4.0.110090407 ■ 3.5.126103 ■ 3.4.125129 	Quarterly update, including new features, stability improvements, and improved accuracy.
January 27, 2009	■ 4.2.110090121	<p>Major update corresponding with the release of IDP 4.2r2. Updates include:</p> <ul style="list-style-type: none"> ■ A new decoder for the MODBUS serial communications protocol. Improved accuracy with new contexts and other changes to reduce false positives. ■ Increased security coverage with new anomalies. ■ Resolution of issues with DNS, H.225 SGN, HTML, LDAP, MS-SQL, SIP, and SMB decoders.
January 15, 2009	<ul style="list-style-type: none"> ■ 4.1.110090107 ■ 4.0.110090107 ■ 3.4.121591 ■ 3.1.121592 	<p>Major update, including:</p> <ul style="list-style-type: none"> ■ A new decoder for the MODBUS serial communications protocol. ■ Resolution of issues with DNS, H.225 SGN, LDAP, MS-SQL, SIP, SMB, and TNS decoders. ■ Increased security coverage with new anomalies. ■ Improved accuracy with new contexts and other changes to reduce false positives.
January 5, 2009	<ul style="list-style-type: none"> ■ 3.4.118904 ■ 3.1.118905 	<p>Provides the following new features and fixes:</p> <ul style="list-style-type: none"> ■ 397759, 397759-2. Resolved an issue in the DNS decoder that could result in a security module crash. ■ 400464, 400467. Improved the SMB decoder with new features and anomalies. ■ 400468, 400469. Resolved an issue in the SMB decoder. It now generates UUID context.

Table 1: IDP Detector Engine Features and Resolved Issues by Release *(continued)*

Release Date	Detector Engine Version	Features and Resolved Issues
December 31, 2008	<ul style="list-style-type: none"> ■ 4.1.110081106 ■ 4.0.110081106 	Improves coverage and accuracy for the SIP, SMB, DNS, MS-SQL, and HTTP protocols.
October 23, 2008	<ul style="list-style-type: none"> ■ 4.1.110081008 ■ 4.0.110081008 ■ 3.4.117413 ■ 3.1.117412 	Improves coverage and accuracy for LDAP, SSL, and HTTP protocols.
September 18, 2008	<ul style="list-style-type: none"> ■ 4.1.110080916 	Improves coverage and accuracy for SSI and SIP protocols.
August 21, 2008	<ul style="list-style-type: none"> ■ 3.4.114929 ■ 3.1.115140 	Improves coverage and accuracy for the VOIP/SIP protocol.
July 22, 2008	<ul style="list-style-type: none"> ■ 4.1.110080701 ■ 4.0.110080701 	Improves coverage and accuracy for SMTP, SIP, and H.225 protocols.
July 17, 2008	<ul style="list-style-type: none"> ■ 4.1.110080700 ■ 4.0.110080700 	Improves coverage and accuracy for HTTP, LDAP, and SMB protocols.
June 19, 2008	<ul style="list-style-type: none"> ■ 4.1.110080600 ■ 4.0.110080600 	Improves coverage and accuracy for SIP, HTTP, and MSSQL protocols.
June 10, 2008	<ul style="list-style-type: none"> ■ 3.4.112183 	Improves coverage and accuracy for SIP and HTTP protocols.

IDP Detector Engine Overview

The IDP detector engine is a dynamic protocol decoder that includes support for decoding more than 60 protocols and more than 500 service contexts. The IDP detector engine is used by the IDP process engine in packet analysis.

The detector engine code base is packaged and released separately from the IDP OS, ScreenOS, or JUNOS code bases. Juniper Networks Security Center (J-Security Center) releases IDP detector engine updates more frequently in order to ensure IDP products protect your network against recently discovered vulnerabilities.

NOTE: We recommend you subscribe to the IDP Signature Updates technical bulletin to be notified when J-Security Center releases IDP detector engine updates. Go to <https://www.juniper.net/alerts/>.

Understanding IDP Detector Engine Version Numbers

The IDP detector engine versions that are compatible with your system vary by product family and operating system version. The following table summarizes IDP detector engine version compatibility.

Table 2: IDP Detector Engine Version Compatibility

Hardware	Operating System	IDP Detector Engine Version
J-Services: MX Series	JUNOS 9.4 and later	10.2.150YYMMDD
SRX: SRX5800, SRX5600, SRX3600, SRX3400	JUNOS 9.2 and later	10.2.140YYMMDD
JSRX: SRX650, SRX240, SRX210	JUNOS 9.4 and later	9.2.160YYMMDD
JSR: J-Series	JUNOS 9.5 and later	9.2.130YYMMDD
IDP8200, IDP800, IDP250, IDP75, IDP1100, IDP600, IDP200	IDP 5.0.x	5.0.110YYMMDD
IDP8200	IDP 4.2.x	4.2.110YYMMDD
IDP 75/250/800, IDP 50/200/600/1100, IDP 10/100/500/1000	IDP 4.1.x	4.1.110YYMMDD
IDP 50/200/600/1100, IDP 10/100/500/1000	IDP 4.0.x	4.0.110YYMMDD
ISG 1000/2000	ScreenOS 6.2.x	3.5.xxxxxx
ISG 1000/2000	ScreenOS 6.1x, 6.0.x	3.4.xxxxxx
ISG 1000/2000	ScreenOS 5.4.x, 5.0.x	3.1.xxxxxx

Displaying the IDP Detector Engine Version Number

NSM To view the version of the latest IDP detector engine that has been downloaded to the NSM GUI server:

- In NSM, select **Tools > View/Update NSM Attack Database** and click **Next**.

The wizard displays the IDP detector engine versions that have been downloaded to the NSM GUI server.

To view version information for the IDP detector engine installed on an IDP device:

- In the NSM device manager, double-click the IDP or ISG device to display the device configuration editor.

For standalone IDP devices, the Info node displays version information, including the IDP detector engine version.

For ISG devices, navigate to **Security > SM Settings** to display the IDP detector engine version.

IDP CLI To display the IDP detector engine version number on an IDP Series device:

1. Connect to the CLI as the user **admin** and switch to the user **root**.
2. Run the **scio getsystem** command as shown in the following example:

```

login as: admin

admin's password:

Last login: Thu Apr  9 17:31:47 2009 from 10.150.99.42

[admin@idp ~]$ su -

Password:

[root@idp ~]# scio getsystem

Product Name: NS-IDP-8200
Serial Number: 0254092008000019
Software Version: 5.0.127636
IDP Mode: transparent
HA Mode: Disabled
Detector Version: 5.0.110090408
Software License: Evaluation
Software Expiration Date: 4/25/2009
[root@idp ~]#

```

ScreenOS CLI To display the IDP detector engine version number on an ISG Series device:

1. Connect to the CLI as the user `admin` and switch to the user `root`.
2. Run the `get system` command as shown in the following example:

```

[root@default host admin]# get system

[.]
IDP files version:

detector.so 3.1.101390

[root@default host admin]#

```

The line for `detector.so` shows the version of the detector—in this example, version 3.1.101390.

JUNOS CLI To display the IDP detector engine version number on a JUNOS device:

1. Log into the JUNOS CLI and enter operational mode. For details, see the JUNOS documentation.
2. Enter the command shown in the following example:

```

user@host> show security idp security-package-version

Attack database version:31(Wed Apr 16 15:53:46 2008)
Detector version :9.1.140080400
Policy template version :N/A

```

In this example, the detector version number is 9.1.140080400.

Updating the IDP Detector Engine

NSM To update IDP detector engine using NSM:

1. Download IDP detector engine and NSM attack database updates to the NSM GUI server:

In NSM, select **Tools > View/Update NSM attack database** and complete the wizard steps.

2. Push the updated IDP detector engine to IDP devices:

For IDP or ISG, select **Devices > IDP Detector Engine > Load IDP Detector Engine for ScreenOS** and complete the wizard steps.

NOTE: Updating the IDP detector engine on a device does not require a reboot of the device.

For JUNOS devices, select **Devices > IDP Detector Engine > Load IDP Detector Engine for JUNOS** and complete the wizard steps.

NOTE: There is a known issue using NSM to update the detector engine on devices running JUNOS 9.4 and 9.5. To work around, use the JUNOS CLI or J-Web to update.

-
3. Run a security policy update job to initialize the IDP detector engine update:
 - a. In NSM, select **Devices > Configuration > Update Device Config**.
 - b. Select devices to which to push the updates and set update job options.
 - c. Click **OK**.

JUNOS CLI To update a JUNOS device using the JUNOS CLI:

1. Download the security package. The security package includes the detector and the latest attack objects and groups.

```
user@host> request security idp security-package download full-update
```

2. Update the attack database, the active policy, and the detector with the new package.

```
user@host> request security idp security-package install
```

3. Check the attack database update status with the following command. The command output displays information about the downloaded and installed versions of attack database versions.

```
user@host> request security idp security-package install status
```

4. Commit the configuration.

For additional information, see the [Security Configuration Guide for J-series Services Routers and SRX-series Services Gateways](#).

J-Web To update a JUNOS device using J-Web Quick Configuration:

1. Select **Configuration > Quick Configuration > Security Policies > IDP Policies**.
2. From the IDP policies page, click **Security Package Update**.
3. From the IDP page, click **Signature/Policy Update**.
4. Complete the configuration as described in the online help or *Security Configuration Guide*.
5. Click **Apply**.

For additional information, see the [Security Configuration Guide for J-series Services Routers and SRX-series Services Gateways](#).

Troubleshooting an IDP Detector Engine Update

In NSM, the default URL from which to obtain updates is <https://services.netscreen.com/restricted/sigupdates/nsm-updates/NSM-SecurityUpdateInfo.dat>. If you encounter connection errors, ensure this setting has not been inadvertently changed.

To restore the default URL:

1. Select **Tools > Preferences**.
2. Click **Attack Object**.
3. Click **Restore Defaults**.

NSM restores the URL in the **Download URL for ScreenOS Devices** text box.

4. Click **OK**.

Reverting the IDP Detector Engine Version

In most cases, your use of IDP will not benefit from reverting the IDP detector engine version. In some cases, however, you might be required to revert. If you encounter an issue and need to revert, contact Juniper Networks Technical Assistance Center (JTAC).

New Features and Resolved Issues

PR 444981. Resolved a memory-related issue with the 5.0 SIP decoder discovered during stress testing. The issue had resulted in a crash.

Known Issues

At this time, there are no open issues for the IDP 5.0.xxxxxxxx detector.

Contacting Juniper Networks Technical Assistance Center (JTAC)

If you need additional information or assistance, contact JTAC by E-mail (support@juniper.net) or telephone (1-888-314-JTAC within the United States or 1-408-745-9500 from outside the United States).
