

# Network and Security Manager NSMXpress Series II Quick Start

June 7, 2010  
Revision 1

NSMXpress Series II is an appliance version of Network and Security Manager (NSM). NSMXpress Series II simplifies the complexity of network administration by providing a single, integrated management interface that controls device parameters.

This robust hardware management system installs in minutes with full high availability (HA) support, making it easy to scale and deploy. Enterprise customers with limited resources can benefit significantly from NSMXpress Series II because it eliminates the need to have dedicated resources for maintaining a network and security management solution.

NSMXpress Series II makes it easy for administrators to control device configuration, network settings, and security policy settings for multiple families of Juniper devices including:

- IDP Series Intrusion Detection and Prevention Appliances and Firewall and VPN devices running ScreenOS
- Devices running JUNOS software, such as J Series Services Routers, SRX Series Services Gateways, EX Series Ethernet Switches, M Series Multiservice Edge Routers, and MX Series Ethernet Services routers
- SA Series SSL VPN Appliances
- IC Series Unified Access Control Appliances

For a complete list of supported device families and platforms, see the *Network and Security Manager Administration Guide*.

Up to 10 administrators can log into NSMXpress Series II concurrently.

This quick start explains the following steps for installing and configuring NSMXpress Series II and for configuring NSM.

1. Install the NSMXpress Series II appliance hardware.
2. Set up the NSMXpress Series II appliance using the serial port.

3. Configure the NSMXpress Series II software using the Web interface.
4. Configure the NSM software which is preinstalled onto the NSMXpress Series II appliance, with site-specific parameters.

## Hardware Installation

We recommend that you install NSMXpress Series II on your LAN to ensure that it can communicate with your applicable resources, such as authentication servers, DNS servers, internal Web servers through HTTP/HTTPS, external Web sites through HTTP/HTTPS (optional), the Juniper update server via HTTP, Network File System (NFS) file servers (optional), and client/server applications (optional).

**NOTE:** If you decide to install NSMXpress Series II in your DMZ, ensure that it can connect to your internal resources.

### NSMXpress Series II Ports

Table 1 on page 4 provides required port information on the NSMXpress Series II.

**Table 1: Required Ports on NSMXpress Series II**

Direction	Port	Description	LAN	Internet	Depends on Configuration
In	22	SSH command-line management	Yes	No	No
	443	Web interface for administrator login	Yes	No	No
	8443	Web interface for listening for NSM API messages.	LAN	Yes	Yes
	7800	Connections from managed devices to NSMXpress Series II	Yes	Yes	No
	7801	Connections from the NSM GUI Client to NSM	Yes	No	No
	7802	Heartbeat between peers in an HA cluster	Yes	No	Yes
	7803	Connections from managed IDP devices to NSM	Yes	Yes	Yes
	7804	Connections from devices running JUNOS , Secure Access devices, or Infranet Controller devices	Yes	Yes	Yes

Table 1: Required Ports on NSMXpress Series II (*continued*)

Direction	Port	Description	LAN	Internet	Depends on Configuration
Out	22	SSH connection to new managed device	Yes	Yes	No
	23	Telnet connection to new managed device	Yes	No	Yes
	53	DNS lookups	Yes	No	No
	80	System Security Updates from Juniper Networks	No	Yes	Yes
	111	Shared Disk portmap lookup	Yes	No	Yes
	123	Network Time Protocol (NTP) time synchronization	Yes	Yes	Yes
	2049	Shared Disk NFS connection	Yes	No	Yes

For more information on ports, refer to the *Network and Security Manager Installation Guide*.

## Installing the Hardware

Follow these steps to unpack the NSMXpress Series II appliance and connect it to your network.

To install NSMXpress Series II:

1. Place the shipping container on a flat surface and remove the hardware components with care.
2. Remove the NSMXpress Series II device from the shipping container and place it on a flat surface.
3. Mount NSMXpress Series II in your server rack using the attached mounting brackets.
4. Plug the power cord into the AC receptacle on the rear panel.

Figure 1: Rear Panel of NSMXpress Series II

If your NSMXpress Series II contains two power supplies, plug a power cord into each AC receptacle.

5. Plug the other end of the power cord into a wall socket.

If your NSMXpress Series II contains two power supplies, plug each power cord into a separate power circuit to ensure that the NSMXpress Series II continues to receive power if one of the power circuits fails.

6. Plug the Ethernet cable into the network port marked ETH0 on the front panel. See Figure 2 on page 6.

Figure 2: Front Panel of NSMXpress Series II

7. Plug the console cable with the DB9 to RJ45 adapter into the console port. See Figure 2 on page 6.

This cable was shipped with your NSMXpress Series II. See Table 3 on page 7

8. Push the power button on the rear panel. See Figure 1 on page 6

The green LED on the bottom left corner of the front panel turns on. The NSMXpress Series II hard disk LED turns on whenever the appliance reads data from or writes data to an NSMXpress Series II hard disk.

The internal port uses two LEDs to indicate the LAN connection status, which is described in Table 2 on page 7.

Hardware installation is now complete. The next step is to set up the software, as described in "Initial Setup Configuration" on page 7.

Table 2 on page 7 provides LED information for the ETH0 and ETH1 ports.

**Table 2: Ethernet Port LEDs**

LAN Status	LED 1	LED2
10 Mbps connection	Off	Off
100 Mbps connection	Green	Off
1000 Mbps connection	Orange	Off
Data is being transferred	Orange, Green, or Off	Blinking
No connection	Off	Off

Table 3 on page 7 provides RJ-45 Console Connector Pinout information.

**Table 3: RJ-45 Console Connector Pinout**

Pin	Signal	Description
1	RTS Output	Request to Send
2	DTR Output	Data Terminal Ready
3	TxD Output	Transmit Data
4	GND	Chassis Ground
5	GND	Chassis Ground
6	RxD Input	Receive Data
7	DSR Input	Data Set Ready
8	CTS Input	Clear to Send

## Initial Setup Configuration

When you first turn on an unconfigured NSMXpress Series II appliance, you need to enter basic network and machine information through the serial console to make your appliance accessible to the network. After entering these settings, you can continue configuring the appliance using the CLI or the Web interface. You are not prompted for the initial setup information again.

This section describes the required serial console setup and the tasks you need to perform when connecting to your NSMXpress Series II for the first time:

- Boot NSMXpress Series II on page 8
- Set Up Your Appliance on page 8

## Boot NSMXpress Series II

To configure NSMXpress Series II for the first time, you must attach your NSMXpress Series II appliance to a console terminal running an emulation utility such as HyperTerminal.

1. Configure a console terminal or terminal emulation utility to use the following serial connection parameters:
  - 9600 bits per second
  - 8-bit no parity (8N1)
  - 1 stop bit
  - No flow control

2. Connect the terminal or laptop to the null modem serial cable plugged into the NSMXpress Series II console port.

3. Turn on the NSMXpress Series II appliance.

When NSMXpress Series II is powered on, the serial console displays diagnostic information before proceeding to the boot countdown. When complete, the serial console displays the login prompt terminal emulator.

```
NSMXpress.juniper.net login:
```

4. Enter **admin** as your default login name.
5. Enter **abc123** as your default password.
6. Change your default password when prompted. Enter the default password first, followed by your new password. All passwords are case-sensitive.

## Set Up Your Appliance

This section provides the minimum information necessary to make your appliance active on the network.

To set up your appliance either as a regional server or a central manager, follow these steps:

1. Enter the IP address for interface eth0 and press Enter.
2. Enter the subnet mask for interface eth0 and press Enter.
3. Enter the default route or default gateway address for interface eth0 and press Enter.

```
Applying changes...
Re-loading database
ip_tables: (C) 2000-2002 Netfilter core team
```

```
ip_tables: (C) 2000-2002 Netfilter core team
ip_tables: (C) 2000-2002 Netfileter core team
Done!
```

```
Your NSMXpress is now active on the network.
To configure your system via a web browser, connect to:
https://10.150.43.205/admin
```

```
To configure your system via command line, type:
nsm_setup
```

```
For operation of NSM server, switch to user "nsm".
Please consult NSM product documentation for details.
```

```
[admin@NSMXpress ~]$
```

To configure the NSM software using the CLI, see the *NSMXpress and NSM 3000 User Guide*. To configure the NSM software using the Web interface, go to “Web Interface Configuration” on page 9.

### Web Interface Configuration

To configure NSM on your system from a Web interface, use the following steps.

1. Copy the URL (starting with **https://**) from the terminal emulator after installing NSMXpress:

```
Your NSMXpress is now active on the network.
To configure your system via a web browser, connect to:
https//10.150.43.205/administration
```

2. Open a Web browser and paste the URL into the address text box.
3. Press Enter to open the NSMXpress Series II login page.
4. Enter the admin user name and password and then click Login.
5. See “Configuring the NSM Software” on page 9 for details about how to install and configure NSM on your NSMXpress Series II appliance from the Web interface.

## Configuring the NSM Software

---

After logging in as an ‘admin’ user, an initial setup script walks you through additional configuration system settings before finalizing the NSM installation. This chapter describes that setup process.

Your NSMXpress Series II appliance comes preconfigured as a regional server or a central manager. Most installation and configuration steps in this section are identical for both types of server. All exceptions are noted.

After logging into the NSMXpress Series II Web interface, NSMXpress Series II provides you with the following installation options:

- Configuring Basic Settings on page 10
- Configuring High Availability on page 12
- Advanced Options on page 15
- Installing NSM Software on page 18

## Configuring Basic Settings

To install the regional server or central manager software using the minimum requirements:

1. Install your NSMXpress Series II hardware as described in “Hardware Installation” on page 4.
2. Boot and setup your NSMXpress Series II appliance as described in “Initial Setup Configuration” on page 7.
3. Enter the **https://<ip>/administration** URL for your appliance in a Web browser. See “Web Interface Configuration” on page 9 for details.
4. Log into the Web interface. The **System Info** page opens.
5. Click the link **Install NSM Regional Server** (see Figure 3 on page 11) to go to the Install Regional Server window or click the **Install NSM Central Manager** link to view the Install NSM Central Manager window (see Figure 4 on page 11), as the case may be.

**NOTE:** The “admin” user default username is *admin* and the password is the one you created in Step 6 of “Boot NSMXpress Series II” on page 8.

---

Figure 3: Regional Server Configuration Main Menu

Login: admin

  - Install NSM Regional Server
  - » System Administration
  - » Maintenance
  - » Troubleshooting
- » System Information
- » Logout

## Install NSM Regional Server

**NSM Configuration Main Menu**

**Management IP**    
 The IP address on this server that will be used for management

**NSM 'super' password**   
 Password for 'super' user

**NSM License type**  Base Install  Upload license file:  
 Specify a license file, or select "Base Install" to use the built-in limited device license.

**Remote Replication of Database** Off [Menu](#)

**High Availability** Off [Menu](#)

**SRS** Off [Menu](#)

Figure 4: Central Manager Configuration Main Menu

Login: admin

- » NSM Administration
  - Install NSM Central Manager
  - » System Administration
  - » Maintenance
  - » Troubleshooting
- » System Information
- » Logout

## Install NSM Central Manager

**NSM Configuration Main Menu**

**Management IP**    
 The IP address on this server that will be used for management

**NSM 'super' password**   
 Password for 'super' user

**Remote Replication of Database** Off [Menu](#)

**High Availability** Off [Menu](#)

6. Enter the primary IP address of your management server for eth0 (the default).

You can use the default IP address next to the first radio button or select the second radio button and then enter a different IP address. Each IP address you add (in addition to the default IP address) will be available in the drop-down list after you click the second radio button.

7. Enter the NSM superuser password in the top text box, and then reenter it in the text box below it.

This password must be at least eight characters long and is case-sensitive. This password is used by the NSM superuser (also referred to as the NSM administrator). This user has the highest level of privileges in NSM.

8. Enter the GUI Server one-time password in the top text box, and then reenter it in the text box below it. This password is used to authenticate this NSM server with other NSM servers with which it communicates. Regional servers use this password to authenticate peer servers in an HA configuration and to authenticate the central manager. The central manager uses this password to authenticate its peer server in an HA configuration and any regional servers it manages. NSM servers must have the same GUI Server one-time password, or the authentication will fail.

9. Select the license option. (This option is available only for regional servers.)

- a. Select **Base Install** to use the built-in limited device license for as many as 25 devices.
- b. Click **Upload license file** to upload the license file you generated using the Juniper License Management System (LMS), which permits you to manage more than 25 devices. This license file must be located on your local hard drive.

See the *Network and Security Manager installation Guide* for more information about NSM licensing.

10. Click **Submit** to save any changes, and then click **Install** to install the software.

## Configuring High Availability

To configure high availability (HA) settings:

1. On the NSM Configuration Main Menu, click **Menu** next to High Availability to access HA options. See Figure 5 on page 13.

**Figure 5: High Availability Options**

The screenshot shows a configuration window titled "Menu: High Availability". It contains several settings:

- High Availability:** A dropdown menu with options 'n' and 'y'. The description is "Whether to enable HA on this server or not".
- Primary Status:** A dropdown menu with options 'y' and 'n'. The description is "If 'y', this machine is a Primary Server and if 'n' this machine is a Secondary Server".
- HA Remote IP:** A text input field. The description is "IP address for the peer's primary heartbeat link".
- HA Link Failure Detection IP:** A text input field. The description is "IP address outside the HA cluster".
- HA Inter-server password:** Two text input fields. The description is "Shared password for heartbeat".
- Shared Disk:** A toggle switch set to "Off". A "Menu" link is next to it.
- HA Links:** A "Menu" link.
- HA Advanced Settings:** A "Menu" link.

2. Use the High Availability option to turn HA on (y) or off (n). The default is off.
3. Use the **Primary Status** option to set your NSMXpress Series II appliance as either the primary or secondary server in the HA cluster. If you select **y**, it is the primary server (the default). If you select **n**, it is the secondary server.
4. Use the **HA Remote IP** option to enter the IP address for the HA peer in the HA cluster.
5. Use the **HA Link Failure Detection IP** option to enter the IP address of a computer outside the HA cluster that you can ping to verify connection status.
6. Use the **HA Inter-server password** option to enter the heartbeat password used between the primary and secondary servers.
7. Click **Submit** to save the changes.
8. Click **Menu** next to Shared Disk (see Figure 5 on page 13) to configure a shared disk for regional servers (see Figure 6 on page 14) or for central managers (see Figure 7 on page 14). This step is optional.

Figure 6: Shared Disk Options for Regional Servers

Menu: Shared Disk	
<b>Shared Disk: Gui Server</b>	<input checked="" type="radio"/> n <input type="radio"/> c <input type="text" value="y"/>
If 'y', data directory for GUI Server is a shared disk partition	
<b>Shared Disk: Device Server</b>	<input checked="" type="radio"/> n <input type="radio"/> c <input type="text" value="y"/>
If 'y', data directory for Device Server is a shared disk partition	
<b>Shared Disk Source (NFS)</b>	<input type="text"/>
Source of shared disk, e.g. /dev/sdc1 or server:/share	
<b>Shared Disk NFS Mount Options</b>	<input checked="" type="radio"/> rw <input type="radio"/> c <input type="text"/>
Options when mounting shared disk e.g. rw,intr,tcp,soft,timeo	

Figure 7: Shared Disk Options for Central Managers

Menu: Shared Disk	
<b>Shared Disk: Gui Server</b>	<input type="text" value="y"/>
If 'y', data directory for GUI Server is a shared disk partition	
<b>Shared Disk Source (NFS)</b>	<input type="text"/>
Source of shared disk, e.g. /dev/sdc1 or server:/share	
<b>Shared Disk NFS Mount Options</b>	<input type="text"/>
Options when mounting shared disk e.g. rw,intr,tcp,soft,timeo	

NSMExpress Series II supports shared disk via NFS only. Due to the data-intensive nature of NSM, we recommend gigabit speed links (1000 Mbps) for shared disk use. For more information about custom settings, refer to the *Network and Security Manager Installation Guide*.

- Click **Menu** next to HA Links (see Figure 5 on page 13) to configure the second link in the HA cluster (see Figure 8 on page 14). This step is optional.

Figure 8: HA Links Options

Menu: HA Links	
<b>HA Link count</b>	<input checked="" type="radio"/> 1 <input type="radio"/> c <input type="text" value="1"/>
Number of heartbeat links between the Primary and Secondary Servers.	

Use the options in this menu to set up a redundant link for the HA cluster. If you are going to use a second link, you need to set the IP address for eth1 before configuring this setting (see “Configuring the Network” on page 24 for details). Setting a redundant link is optional. For more information about custom settings, refer to the *Network and Security Manager Installation Guide*.

If you configure HA with just one heartbeat link, then device management traffic and data replication traffic both use that link. If you configure two links, device management traffic uses the first link and data replication uses the second.

If you set the HA link count to 2, an expanded menu appears to configure the second link:

Figure 9: Redundant Links

Menu: HA Links	
<b>HA Link count</b>	<input checked="" type="radio"/> 2 <input type="radio"/> 1
Number of heartbeat links between the Primary and Secondary Servers.	
<b>HA Link 2 Local IP</b>	<input type="text"/>
IP address for this machine's secondary heartbeat link	
<b>HA Link 2 Remote IP</b>	<input type="text"/>
IP address for the peer's secondary heartbeat link	
<b>HA Remote Replication IP</b>	<input type="text"/>
IP address used for remote HA replications	

- Click **Menu** next to HA Advanced Settings (see Figure 5 on page 13) to configure HA advanced settings (see Figure 10 on page 15). This step is optional.

For more information about custom settings, refer to the *Network and Security Manager Installation Guide*.

Figure 10: HA Advanced Settings

Menu: HA Advanced Settings	
<b>HA Heartbeat Frequency</b>	<input checked="" type="radio"/> 15 <input type="radio"/> <input type="text"/>
Time interval in seconds between heartbeat messages (Default is 15 seconds) (Range is 5 to 3600)	
<b>HA Heartbeat Failure Threshold</b>	<input checked="" type="radio"/> 4 <input type="radio"/> <input type="text"/>
Number of missing heartbeat messages before automatic switchover occurs (Default is 4 missing messages) (Range is 1 to 10000)	
<b>HA Data Replication Timeout</b>	<input checked="" type="radio"/> 1800 <input type="radio"/> <input type="text"/>
Rsync Command Replication Timeout (Default is 1800 seconds) (Range is 1 to 65535)	

- Click **Submit** to save the HA options and return to the NSM Configuration Main Menu.

## Advanced Options

To display the Advanced Options menu, on the NSM Configuration Main Menu, select **Menu** next to Advanced Options. The Advanced Options menu appears as shown in Figure 11 on page 15.

Figure 11: Advanced Options Menu

Menu: Advanced Options	
<b>https port for NBI service</b>	<input checked="" type="radio"/> 8443 <input type="radio"/> <input type="text"/>
The port number to listen for NBI (Default is 8443)	
<b>Remote Replication of Database SRS</b>	Off <input type="radio"/> <a href="#">Menu</a>
	Off <input type="radio"/> <a href="#">Menu</a>

Advanced installation options include:

- **https port for NBI service**—Allows you to configure a port to listen for messages for the NSM API. By default, this value is 8443. You can configure it to any port number from 1025 to 65535.
- **Remote Replication of Database**—Mirrors the daily backup to an external server. You can toggle it on or off. After you turn it on, use the menu options to configure this option.
- **SRS Enabled Options (regional server only)**—Opens a menu to enable and configure the Statistical Report Server (SRS). These options enable NSMXpress Series II to interface with SRS. You can toggle it on or off. When it is on, a menu with additional options is available.

**NOTE:** SRS must be installed on a separate server from NSM.

The following sections provide details about the remote replication and SRS options:

- [Enabling and Configuring Remote Replication of the Database](#) on page 16
- [Enabling and Configuring SRS \(Regional Server Only\)](#) on page 17

### Enabling and Configuring Remote Replication of the Database

To configure remote replication of database settings:

1. On the Advanced Options menu, click **Menu** next to Remote Replication of Database (see Figure 5 on page 13) to configure daily backups (see Figure 12 on page 16).

**Figure 12: Remote Replication of Database Options**

Menu: Remote Replication of Database	
<b>Remote Replication of Database</b>	<input type="radio"/> n <input checked="" type="radio"/> y
If 'y', local backups will be sent to a remote backup machine	
<b>Hour of day to Replicate Database</b>	<input type="radio"/> 02 <input type="radio"/> 00
Hour to start a backup	
<b>Remote Backup IP</b>	<input type="text"/>
IP address of a remote backup machine	
<b>Remote Replication Timeout (seconds)</b>	<input type="radio"/> 1800 <input type="text"/>
Rsync Command Backup Timeout (seconds) (Default is 1800 seconds) (Range is 1 to 65535)	

2. Use the **Remote Replication of Database** option to turn remote replication on (**y**) or off (**n**). The default is off.
3. Use the **Hour of day to Replicate Database** option to start the backup. The valid range (in hours) is 00 through 23. The default is 2 AM.
4. Use the **Remote Backup IP** option to enter the IP address of the remote backup server.

Backup information is copied to the `/var/netscreen/dbbackup` directory on the remote server. The “nsm” user must exist on both servers and you must establish an SSH trust relationship. See the *Network and Security Manager Installation Guide*, for details.

- Use the Remote Replication Timeout option to set up a timeout for Rsync. The valid range (in seconds) is 1-65535. The default is 1800 seconds.
- Click **Submit** to save the options and return to the main menu or continue with the other advanced installation options.

### Enabling and Configuring SRS (Regional Server Only)

This option is not available on a central manager. To configure statistical report server (SRS) settings:

- On the Advanced Options menu, click **Menu** next to SRS (see Figure 5 on page 13) to open the SRS menu (see Figure 13 on page 17).

Figure 13: SRS Menu

Menu: SRS		
<b>SRS</b>	<input checked="" type="radio"/> n	<input type="radio"/> y
Statistical Report Server will be used with this GUI Server		
<b>SRS DB IP</b>		<input type="text"/>
Database server IP address		
<b>SRS DB Type</b>	<input checked="" type="radio"/> pgsql	<input type="radio"/> pgsql
Database type		
<b>SRS Database Name</b>	<input checked="" type="radio"/> netscreen	<input type="text"/>
Database name		
<b>SRS DB Owner Name</b>	<input checked="" type="radio"/> netscreen	<input type="text"/>
Database user name		
<b>SRS DB Owner Password</b>		<input type="text"/>
Database password		

- Use the **SRS** options to turn SRS on (**y**) or off (**n**). The default is off. If you turn on this feature, the server is used with the GUI server.
- Use the **SRS DB IP** option to enter the IP address for the server on which you have installed the SRS database server.
- Use the **SRS DB Type** option to select the database type. The values are pgsql (the default), oracle, or mssql.
- Use the **SRS Database Name** option to enter the name of the SRS database. The default value is netscreen. To enter another name, click the radio button next to the blank text box and enter the name in the text box.
- Use the **SRS DB Owner Name** option to enter the owner's name of the SRS database. The default value is netscreen. To enter another name, click the radio button next to the blank text box and enter the name in the text box.

7. Use the **SRS Database Owner Password** option to enter the SRS database password. The password requires a minimum of eight characters and is case-sensitive. Reenter it in the second text box.
8. Click **Submit** to save the options and return to the NSM Configuration Main Menu.

## Installing NSM Software

After you submit all your configuration options, click **Install** to install the NSM software on your NSMExpress Series II appliance. Installation takes a few minutes. A status indicator shows the progress of the installation. Wait until installation is finished before continuing to use the Web interface.

## Managing NSM Administration

Expand **NSM Administration** in the left navigation tree to access the options described in this section. These options are available only after installing NSM.

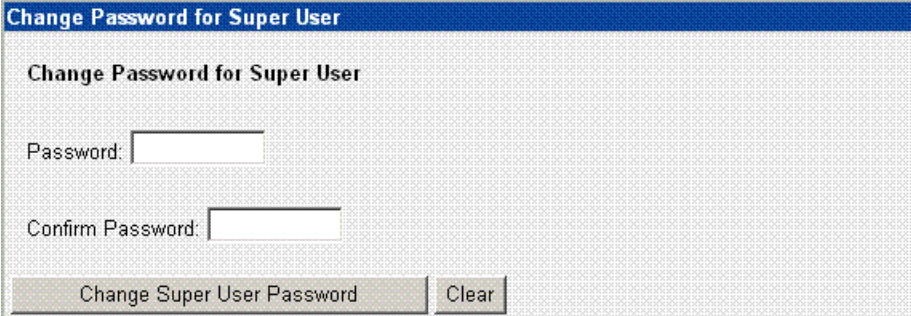

The following sections explain how to use each of the NSM Administration options:

- Changing the Superuser Password on page 18
- Downloading NSM MIBS (Regional Server Only) on page 19
- Exporting Audit Logs on page 19
- Exporting Device Logs (Regional Server Only) on page 19
- Generating Reports (Regional Server Only) on page 20
- Modifying NSM Configuration Files on page 20
- Backing Up the NSM Database on page 21
- Changing the NSM Management IP on page 22
- Scheduling Security Updates on page 22

## Changing the Superuser Password

To change the superuser password, select **NSM Administration > NSM Super User Password**. See Figure 14 on page 18.

Figure 14: Change Superuser Password

**Change Password for Super User**

**Change Password for Super User**

Password:

Confirm Password:

### Downloading NSM MIBS (Regional Server Only)

To download any available MIBs, select **NSM Administration > Download NSM MIBS**, and then click **Download MIB**. See Figure 15 on page 19. This option is not available on the central manager.

Figure 15: Download NSM MIBs

### Exporting Audit Logs

To export audit logs, select **NSM Administration > Export Audit Logs**. See Figure 16 on page 19.

Figure 16: Export Audit Logs

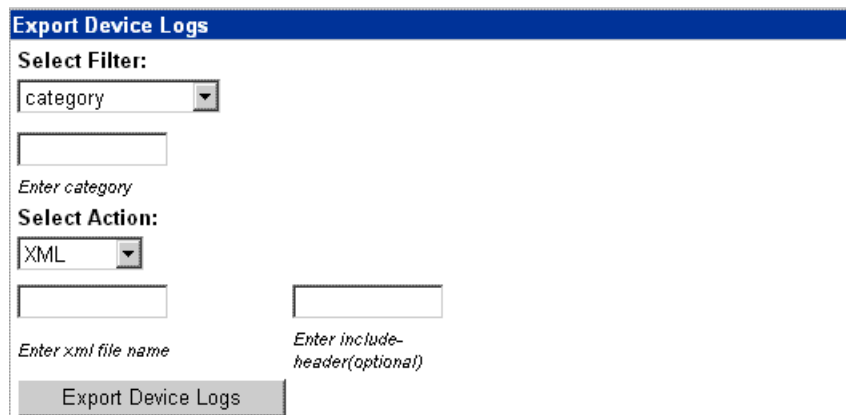

To export an audit log to a **csv** file, select **csv** in the drop-down list box, and then enter the **csv** file name in the text box.

To export an audit log to a system log server, select **syslog** in the drop-down list box, and then enter the server IP address, if it is not the local host.

### Exporting Device Logs (Regional Server Only)

To export device logs, select **NSM Administration > Export Device Logs**. See Figure 17 on page 19. This option is not available on the central manager.

Figure 17: Export Device Logs

## Generating Reports (Regional Server Only)

To generate reports, select **NSM Administration > Generate Reports**. See Figure 18 on page 20. This option is not available on the central manager.

Figure 18: Generate Reports

**Generate Reports**

The Reports need to be created by logging in through the UI, before running the script below.

Domain:  Type:  Report:  Script:   
 Eg: global Eg: system/shared Eg: mytest Eg: ftp.sh/email.sh

User:  Password:   
 Eg: global/super

Schedule Reports:

Minutes:  Hour:  Day:  Month:  Week Day:

**NOTE:** The user is an NSM administrator and not an NSMExpress Series II user. Enter a user name as *domain/user*, such as *global/super*.

## Modifying NSM Configuration Files

To manually edit the `GuiSrv.cfg`, `DevSvr.dfg` and `HaSvr.cfg` files, select **NSM Administration > Modify NSM Configuration Files**. The example in Figure 19 on page 21, shows the option to modify the `GuiSrv.cfg` file.

Figure 19: NSM Configuration Files

## NSM Configuration Files

**GuiSvr.cfg** [DevSvr.cfg](#) [HaSvr.cfg](#)

The page allows you to manually edit the `/usr/netscreen/GuiSvr/var/guiSvr.cfg`. Be careful, as no syntax checking will be done on your edits.

**The server will be restarted once the changes are made.**

```
# this file contains just enough info for the processes
# to start up. Each process should pull its complete
# configuration from the NML DB

setuid.user          nsm
clientId            0
peerGuiSvrId        2
clientOneTimePassword dk2003ns

default.printLevel   warn
default.printProperties where=file, sync=0, maxfilenum=25
#statusMonitor.printLevel debug
#statusMonitor.printProperties where=file, sync=1, maxfilenum=250
#guiSvrDirectiveHandler.printLevel debug
#guiSvrLicenseManager.printLevel debug
#guiSvrMasterController debug
guiSvrLicenseManager.licenseFile /usr/netscreen/GuiSvr/var/license/license.txt

#guiSvrManager.printLevel debug
```

Save

**NOTE:** If you subsequently change the NSMXpress Series II configuration by using the `nsm-setup` utility, all manual changes to the configuration files are lost.

### Backing Up the NSM Database

To configure backups of the NSM database, select **NSM Administration > NSM Database Backup** link under NSM Administration. See Figure 20 on page 22.

Figure 20: Database Backup

## Database Backup

NSM Backup Configuration Parameters			
Local Backup Enabled	<input checked="" type="radio"/> y	<input type="radio"/>	<input type="text" value="y"/>
Remote Backup enabled	<input checked="" type="radio"/> n	<input type="radio"/>	<input type="text" value="y"/>
Hour of Day to Replicate Database	<input checked="" type="radio"/> 02	<input type="radio"/>	<input type="text" value="00"/>
Remote Backup IP	<input type="text"/>		
<input type="button" value="Submit"/>			
Execute Backup Now			
<input type="button" value="Apply"/>			
Download Database Backup Files			
File to Download	<input type="text" value="/var/netscreen/dbbackup/"/> <input type="button" value="..."/>		
<input type="button" value="Download Backups"/>			

### Changing the NSM Management IP

To change the IP address of the NSM management server, select **NSM Administration** > **NSM Management IP** link under NSM Administration. See Figure 21 on page 22.

Figure 21: Change Management IP

NSM Management IP	
Management Ip	<input checked="" type="radio"/> 172.24.68.111 <input type="radio"/> <input type="text"/>

### Scheduling Security Updates

To schedule security updates, select **NSM Administration** > **Schedule Security Updates**. See Figure 22 on page 23.

Figure 22: Schedule Security Updates

**Security Update**

**Select Post Action:**

update-devices skip

*Update Devices after Attack*      *Select update device action: Skip(skips update of unconnected device)*

Run Security Update

## Managing System Administration

Use the options in the System Administration section to perform the tasks described in the following sections:

- Rebooting or Shutting Down NSMXpress Series II on page 23
- Changing the User Password on page 24
- Configuring the Network on page 24
- Managing RADIUS Servers on page 26
- Monitoring with SNMP on page 29
- Forwarding Syslog Messages on page 32
- Changing the System Time on page 35
- Installing Updates on page 35
- Managing Users on page 36
- Configuring the Web Interface on page 40

## Rebooting or Shutting Down NSMXpress Series II

To reboot or shut down NSMXpress Series II, select **System Administration > Bootup and Shutdown**, and then click either **Reboot System** or **Shutdown System**. See Figure 23 on page 23.

Figure 23: ReBoot or Shut Down

**Bootup and Shutdown**

Reboot System

Shutdown System

## Changing the User Password

To change the user password, select **System Administration > Change User Password**, fill out the form shown in Figure 24 on page 24, and then click **Change**.

Figure 24: Change User Password

**Changing NSMExpress user password**

Changing password for admin

Old password

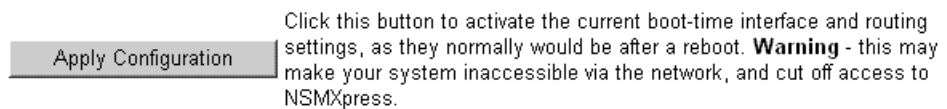

New password

New password (again)

## Configuring the Network

To access options that allow you to configure the network, select **System Administration > Network Configuration**. The Network Configuration window appears as shown in Figure 25 on page 24.

Figure 25: Network Interfaces Options

The following sections describe each of the options available in the Network Configuration window:

- Network Interfaces on page 24
- Routing and Gateways on page 25
- Hostname and DNS Clients on page 25
- Host Addresses on page 26

### Network Interfaces

Use this option to manage the network interfaces. See Figure 26 on page 25.

Figure 26: Network Interfaces

Module Index

## Network Interfaces

<input type="checkbox"/>	169.254.0.0	None	255.255.0.0	eth0
<input type="checkbox"/>	Default Route	172.24.68.1		eth0

## Hostname and DNS Clients

Use this option to configure and manage hostnames and DNS clients. See Figure 28 on page 26.

Figure 28: DNS Client Options

### Host Addresses

Use this option to manage host addresses, See Figure 29 on page 26.

Figure 29: Host Address

IP Address	Hostnames
<input type="checkbox"/> 127.0.0.1	NSMXpress.juniper.net , NSMXpress , localhost.localdomain , localhost

Select all. | Invert selection. | Add a new host address.

Delete Selected Host Addresses

## Managing RADIUS Servers

The NSMXpress Series II WebUI supports authentication of users defined in the RADIUS servers, in addition to authentication of locally defined admin users.

When a user logs into NSMXpress Series II using the WebUI, the software first checks the UNIX user database and then the WebUI user database to authenticate the user. If the user is not a locally defined admin user, the software contacts the RADIUS servers added to the RADIUS server list in the Web UI to authenticate the user. The RADIUS servers are contacted in the order of priority set in the RADIUS server list. If any of the RADIUS servers authenticates the user, the user is logged in with the privileges that are associated with the user profile. If none of the servers authenticates the user, the user login fails.

**NOTE:** The NSMXpress Series II appliance must be configured as a RADIUS client on a RADIUS server so that the RADIUS server responds to authentication requests from NSMXpress Series II. Select any Juniper Make or Model in the Make/Model field while adding an NSMXpress appliance as a RADIUS client. You will need to update the juniper dictionary file (juniper.dct) in the RADIUS server with the Juniper defined Vendor-Specific Attribute (VSA) for NSMXpress:ATTRIBUTE Juniper-Nsmxpress-Profile Juniper-VSA(6, string) r. You will also need to add NSMXpress Series II users with their associated user profiles (SysAdmin, NSMAdmin, Operator, Guest), to the RADIUS database. For more details see *Steel-Belted Radius Documentation*.

**NOTE:** You need System Administration or NSM Administration permission to manage RADIUS servers in the NSMXpress Series II WebUI.

- Adding a RADIUS Server on page 27
- Changing the Priority of RADIUS Servers on page 28
- Deleting a RADIUS Server on page 28
- Editing RADIUS Server Parameters on page 28

### Adding a RADIUS Server

To add a RADIUS server:

1. Select **System Administration > Radius Management**. The RADIUS Servers dialog box appears listing the RADIUS Servers that have been added. See Figure 30 on page 27.

**Figure 30: RADIUS Servers Dialog Box**

Radius Servers

RADIUS Servers							
	Name	Host	Auth Port	Accounting Port	COA Port	Retries	Timeout
<input type="checkbox"/>	RadiusSvr2	10.204.77.118	1812	1813	4600	1	3
<input type="checkbox"/>	RadiusSvr1	jghosh-dc.jnpr.net	1812	1813	4564	1	3

Add Delete Selected Move Up Move Down Select All

2. Click **Add** to add a RADIUS Server to the WebUI. The Add Radius Server dialog box appears. See Figure 31 on page 27.

**Figure 31: Add RADIUS Server Dialog Box**

Add Radius Server

Add RADIUS Server

Name	server1
Server address	10.206.144.154
Shared secret	*****
Auth port	1645
Acct port	1646
Disconnect/CoA port	1700
Timeout(secs)	3
Retries	1

Add Clear

[Return to Radius Servers list](#)

3. Configure the following parameters in the Add RADIUS Server dialog box:
  - a. **Name:** The name of the user to be authenticated by the RADIUS server.
  - b. **Server address:** The IP address or the hostname of the RADIUS Server.
  - c. **Shared secret:** The shared secret NSMXpress Series II and the RADIUS server use for secure authentication.

- d. **Auth Port:** The RADIUS authentication software port. (We recommend UDP port 1812.)
  - e. **Acct Port:** The RADIUS accounting software port. (We recommend UDP port 1813.)
  - f. **Disconnect/CoA port:** The change of authorization or disconnect port.
  - g. **Timeout (sec):** Automatic time out in second(s) of the RADIUS access-request after which the request will be retransmitted, if applicable. Enter a value between 1 and 10 seconds.
  - h. **Retries:** The number of times the RADIUS access-request must be retransmitted for RADIUS authentication. Enter a value between 1 and 5.
4. Click **Add**. The RADIUS Servers dialog box appears with the RADIUS Server you added listed.

### Changing the Priority of RADIUS Servers

To change the priority of RADIUS servers:

1. Select **System Administration > Radius Management**. The RADIUS Servers dialog box appears listing the RADIUS Servers that have been added.
2. To increase the priority of a RADIUS server, select the check box next to the name of the server whose priority you want to increase, and click **Move Up**.  
To decrease the priority of a RADIUS server, select the check box next to the name of the server whose priority you want to decrease, and click **Move Down**.

### Deleting a RADIUS Server

To delete a RADIUS server:

1. Select **System Administration > Radius Management**. The RADIUS Servers dialog box appears listing the RADIUS Servers that have been added.
2. Select the check box next to the name of the server you want to delete, and click **Delete Selected**.

**NOTE:** You need System Administration permissions to delete RADIUS servers.

---

### Editing RADIUS Server Parameters

To edit the parameters of a RADIUS server:

1. Select **System Administration > Radius Management**. The RADIUS Servers dialog box appears listing the RADIUS Servers that have been added.
2. Click the name of the server whose properties you want to edit. The Edit RADIUS Server dialog box appears. See Figure 32 on page 29.

Figure 32: Edit RADIUS Server Dialog Box

Module Index Edit Radius Server

Disconnect/CoA port	1700
Timeout(secs)	3
Retries	1

[← Return to Radius Servers list](#)

3. Edit the parameters you want to change and click **Save**.

## Monitoring with SNMP

You can configure your NSMXpress Series II appliance for SNMP monitoring from a network operations server. The server can then issue periodic SNMP Get instructions to return the status of the NSMXpress Series II appliance.

You configure SNMP on the NSMXpress Series II appliances with access credentials for either SNMP v2c or SNMP v3. NSMXpress Series II supports read-only access to the System Descriptor (sysDescr) and Host Resource MIB.

This section provides instructions for configuring NSMXpress Series II for SNMP monitoring. You must provide access credentials for the SNMP server, a list of IP addresses from which logon requests will be accepted, and the trap conditions to be reported to the SNMP server.

To configure SNMP monitoring of your NSMXpress Series II appliance, select **System Administration > SNMP Monitoring**. The SNMP window appears. This window contains the tabs described in the following sections:

- SNMP Configuration on page 29
- SNMP System Information on page 30
- SNMP Trap Configuration on page 31

### SNMP Configuration

To configure SNMP:

1. Select **System Administration > SNMP Monitoring**.
2. Select the **SNMP Config** tab, which is shown in Figure 33 on page 30.

Figure 33: Configuring SNMP

3. Select the version of SNMP to be used, either **v2c** or **v3**.
4. Provide authentication information:
  - If you selected SNMP v2c, enter a username.
  - If you selected SNMP v3, enter a username and password.

The password must be at least 8 characters long.

NSMExpress Series II implements a single username and password, which is effective only for SNMP communication and is not related to any other username and password used on the NSMExpress Series II appliance.

5. To limit SNMP Get requests to specific servers, select **Only**, and then enter the IP addresses of the permitted servers.
6. Click **Save**.

### SNMP System Information

To configure SNMP system information:

1. Select **System Administration > SNMP Monitoring**.
2. Select the **System Info** tab, which is shown in Figure 34 on page 30.

Figure 34: Configuring SNMP System Information

3. Enter the following information, which is required for any SNMP-managed device:
  - Contact—Contact information for the appliance.
  - Location—Location of the appliance.

- Description—A brief description of the appliance.
4. Click **Save**.

### SNMP Trap Configuration

To configure SNMP trap conditions:

1. Select **System Administration > SNMP Monitoring**.
2. Select the **SNMP Traps** tab, which is shown in Figure 35 on page 31.

Figure 35: Configuring SNMP Traps

Trigger	Value
<input checked="" type="checkbox"/> Disk space low	15 percent
<input checked="" type="checkbox"/> Memory low	20 percent
<input checked="" type="checkbox"/> CPU high	85 percent
<input checked="" type="checkbox"/> NSM start / stop	
<input checked="" type="checkbox"/> Admin Logon / Logoff	
<input checked="" type="checkbox"/> External IP Unreachable	

3. In the **Manager IP** field, enter the IP address of the SNMP management server.
4. Select from the following trap conditions:
  - **Disk space low**  
Enter the percentage of free disk space below which SNMP issues a trap.
  - **Memory low**  
Enter the percentage of free memory below which SNMP issues a trap.
  - **CPU high**  
Enter the percentage of CPU use over which SNMP issues a trap.
  - **NSM start/stop**
  - **Admin Logon/Logoff**
  - **External IP unreachable**  
Enter the IP address of the required device.
5. Click **Save**.

## Forwarding Syslog Messages

NSMXpress Series II provides a simple mechanism for configuring syslog messaging between the NSMXpress Series II appliance and a syslog receiver running rsyslog, syslog-NG, or basic syslog. This mechanism simplifies choosing syslog receivers, data sources of the messages you want to log, and the message transport used.

For the type of message transport, you can choose among TCP, SSL, and UDP. For rsyslog or syslog-NG implementations use TCP or SSL. SSL adds security to TCP; if you select SSL, NSMXpress Series II creates a secure tunnel to the syslog receiver. UDP messaging is available for basic syslog implementations.

The following sections provide procedures for managing syslog message forwarding:

- Viewing Syslog Receivers on page 32
- Adding and Configuring Syslog Receivers on page 33
- Editing Syslog Receiver Configurations on page 35
- Deleting Syslog Receivers on page 35

### Viewing Syslog Receivers

To view the syslog receivers configured on your NSMXpress Series II appliance, follow these steps:

1. Select **System Administration > Syslog Forwarding**. The Syslog Forwarding window appears. Figure 36 on page 34 shows an example.

### Syslog Forwarding

Select all | Invert selection | Add new Receiver

Receiver	Address	Type	System	Device Server	GUI Server	HA Server
<input type="checkbox"/> server1	1.2.3.4	UDP	maillog, updates	datacollector.log, ddhnspl.log, deviceDaemon.0, deviceservice.log, gproDDM.log	generateMPK.0, gproGDM.log, license.log, statusMonitor.0	highAvail.0
<input type="checkbox"/> sever2	1.2.3.5	UDP	messages			

Select all | Invert selection | Add new Receiver

Delete selected receivers

NSM Data Sources	
GUI Server Log	Syslog facility
fingerprintMPK.0	user
generateMPK.0	user
gproGDM.log	user
guiDaemon.0	user
license.log	user
nbiservice.log	user
pro.mc.log	user
statusMonitor.0	user
webproxy.log	user
xdbservice.log	user
Device Server Log	Syslog facility
datacollector.log	user
ddhnspl.log	user

- View the configured syslog receivers in the table in the top portion of the window. Table 4 on page 33 describes the fields.

**Table 4: Viewing Syslog Receivers**

Field	Description
Receiver	A name provided by the network administrator to identify the syslog receiver
IP Address	The IP address of the syslog receiver
Type	The protocol used for forwarding messages: UDP, TCP, SSL
Data sources	The data sources configured for forwarding
System	The system logs configured to be sent to this receiver.
Device Server	The Device Server logs configured to be sent to this receiver.
GUI Server	The GUI Server logs configured to be sent to this receiver.
HA Server	The HA Server logs configured to be sent to this receiver.

### Adding and Configuring Syslog Receivers

To add and configure a syslog receiver, follow these steps:

- Select **System Administration > Syslog Forwarding**.
- In the Data Sources section, select the syslog facility for each GUI Server log, Device Server log, and HA Server log. The syslog facility is a field included in the syslog message to help identify the data source.
- Click **Save**.
- Click **Add new Receiver**.

The syslog receiver configuration window appears as shown in Figure 36 on page 34.

Figure 36: Configuring a Syslog Receiver

<input checked="" type="checkbox"/> deviceservice.log	user
<input checked="" type="checkbox"/> gproDDM.log	user
<input type="checkbox"/> newLogWalker.D	user
<input type="checkbox"/> pro.dc.log	user
<input type="checkbox"/> profilerMgr.D	user
<input type="checkbox"/> statusMonitor.D	user

HA Server Log	Syslog facility
<input type="checkbox"/> backup.log	user
<input type="checkbox"/> ha.log	user
<input checked="" type="checkbox"/> highAvail.D	user

- In the Name field, enter a name for the syslog receiver. This is the name that the syslog receiver will be known by within NSM.
- In the IP field, Enter the IP address of the syslog receiver.
- In the Transport field, select the type of syslog receiver:
  - Select **UDP** for basic syslog implementations.
  - Select **TCP** for rsyslog or syslog-NG implementations.

- Select **SSL** to create a secure tunnel to a syslog receiver in rsyslog or syslog-NG implementations.
  - In the System Logs section of the Data Sources table, select the sources of data from which system messages will be forwarded to the syslog receiver. These sources can include NSMXpress Series II system messages, package updates, and mail logs.
  - In the NSM section of the Data sources table, select each GUI Server log, Device Server log, and HA Server log to be forwarded to the syslog receiver.
8. Click **Save** to save and apply the configuration.

### Editing Syslog Receiver Configurations

To edit a syslog receiver configuration, follow these steps:

1. Select **System Administration > Syslog Forwarding**.
2. In the Syslog Receivers window, click the name of the syslog receiver you want to edit.

The syslog receiver configuration window appears for the selected receiver.

3. Make the desired changes to the configuration.
4. Click **Save** to save and apply your edits to the configuration of this syslog receiver.

### Deleting Syslog Receivers

To delete a syslog receiver configuration, follow these steps:

1. Select **System Administration > Syslog Forwarding**.
2. In the Syslog Receivers window, check the box next to each syslog receiver you want to delete.
3. Click **Delete selected receivers**.

NSMXpress Series II deletes the selected syslog receivers and any secure tunnels configured for their use.

## Changing the System Time

To set the system time, select **System Administration > System Time**. From the System Time window, you can perform the following functions:

- Set or change the system time.
- Set the time zone.
- Configure an NTP server to synchronize the system time with an external clock.

## Installing Updates

Select **System Administration > System Update** to perform the following tasks:

- Check for updates and install them.
- Enable or disable automatic updates.
- Install a new NSMXpress Series II version.
- Add or modify proxy settings for the Yum server.

## Managing Users

The NSMXpress Series II WebUI allows you to create multiple users with role-based access control to the WebUI. You can create a user in the WebUI and associate the user to a predefined user profile. You can also map a user created in the NSMXpress Series II OS to a predefined user profile in the WebUI. However, this user profile is only applicable to the local OS user in the WebUI.

**NOTE:** You need System Administration permission to create users.

This topic contains the following sections:

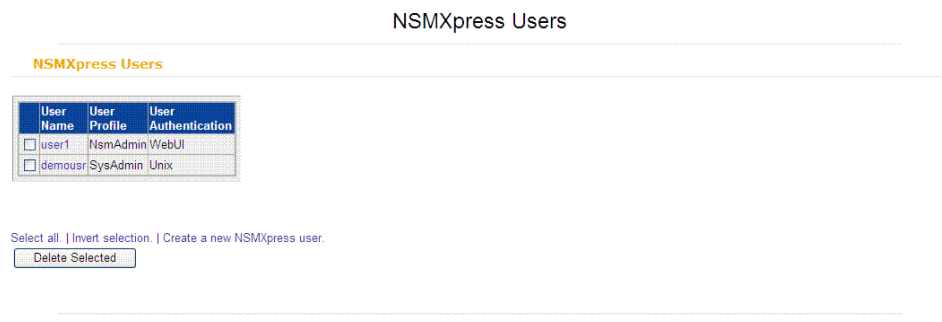

- Creating New NSMXpress Series II Users on page 36
- Deleting a User on page 38
- Editing User Attributes on page 38
- Understanding User Profiles on page 38

### Creating New NSMXpress Series II Users

To create a local OS user:

1. Select **System Administration > User Management**. The NSMXpress Users dialog box appears listing all NSMXpress users. See Figure 37 on page 36.

**Figure 37: NSMXpress Users Dialog Box**

2. Click **Create a new NSMXpress User**. The Create NSMXpress user dialog box appears. See Figure 38 on page 37.

Figure 38: Create NSMXpress User Dialog Box

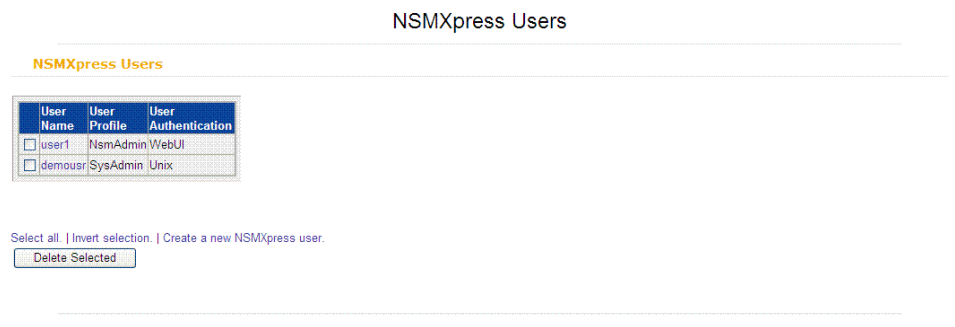

3. Enter the user name in the local OS, in the **Username** text box.
4. Select **Unix authentication** from the **Password** drop-down list. The Password and Confirm Password text boxes will be disabled since the password will be fetched from the local OS.
5. From the **User Profile** drop-down list box, select the user profile you want to associate with the local user in the WebUI.
6. Click **Submit**. The NSMXpress Users dialog box appears with the new NSMXpress user listed.

To create a WebUI user:

1. Select **System Administration > User Management**. The NSMXpress Users dialog box appears listing all NSMXpress users. See Figure 39 on page 37.

Figure 39: NSMXpress Users Dialog Box

2. Click **Create a new NSMXpress User**. The Create NSMXpress user dialog box appears.
3. Enter a user name in the **Username** text box.
4. Select **Set to** from the password drop-down list and enter the password you want to set in the password text box.
5. Reenter the password in the **Confirm Password** text box.

6. Select the user profile you want to associate with this user from the **User Profile** drop-down list box.
7. Click **Submit**. The NSMXpress Users dialog box appears with the new NSMXpress user listed.

### Deleting a User

To delete a user:

1. Select **System Administration > User Management**. The NSMXpress Users dialog box appears listing all NSMXpress users.
2. Select the check box next to the name of the user you want to delete and click **Delete Selected**. Click **Delete User** in the Delete Users confirmation dialog box that appears.

**NOTE:** You cannot delete admin users or change their user profiles.

---

### Editing User Attributes

To edit user attributes:

1. Select **System Administration > User Management**. The NSMXpress Series II Users dialog box appears, with all NSMXpress Series II users listed.
2. Click on the name of the user whose attributes you want to edit. The Edit NSMXpress Series II Users dialog box appears.
3. Edit the parameters you want to change and click **Submit**. You can change the password and the user profile.

### Understanding User Profiles

NSMXpress Series II I provides four predefined user profiles that allow you to implement role-based access control over the NSMXpress Series II WebUI. A user created via the WebUI or in the RADIUS server can be associated with any one of the following profiles:

- **System Administrator**—System Administrators are superusers for the NSMXpress Series II WebUI and have full access to all the modules in the NSMXpress Series II WebUI.
- **NSM Administrator**—NSM Administrators have access to NSM Administration, Radius Management, Maintenance and Troubleshooting modules.
- **Network Operator**—Network Operators have access to Network Utilities and Report Generation Modules.
- **Guest User**—Guest Users have read access to System Information and System Statistics modules.

When a user logs in, NSMXpress Series II modules are displayed or hidden based on the user profile and the permissions associated with the profile. For more details about user profiles and permissions, see Table 5 on page 39.

Table 5: NSMXpress WebUI User Profiles and Permissions

NSMXpress Modules	System Administrator	NSM Administrator	Network Operator	Guest User
<b>System Administration</b>				
Bootup and Shutdown	Yes	No	No	No
Change User Password	Yes	No	No	No
Network Configuration	Yes	No	No	No
Radius Management	Yes	Yes	No	No
SNMP Monitoring	Yes	No	No	No
Syslog Forwarding	Yes	No	No	No
System Time	Yes	No	No	No
System Update	Yes	No	No	No
User Management	Yes	No	No	No
WebUI Configuration	Yes	No	No	No
<b>NSM Administration</b>				
Change NSM Super User Password	Yes	Yes	No	No
Download NSM MIBs	Yes	Yes	No	No
Export Audit Logs	Yes	Yes	Yes	No
Export Device Logs	Yes	Yes	Yes	No
Generate Reports	Yes	Yes	Yes	No
NSM Configuration Files	Yes	Yes	No	No
NSM Database Backup	Yes	Yes	No	No
NSM Management IP	Yes	Yes	No	No
Schedule Security Updates	Yes	Yes	No	No
<b>Maintenance</b>				
System Statistics	Yes	Yes	Yes	Yes
<b>Troubleshooting</b>				
Action Audit Logs	Yes	Yes	No	No

NSMXpress Modules	System Administrator	NSM Administrator	Network Operator	Guest User
Error Logs	Yes	Yes	Yes	No
Network Utilities	Yes	Yes	Yes	No
Tech Support	Yes	Yes	Yes	No
System Information	Yes	Yes	Yes	Yes

## Configuring the Web Interface

To specify which NSM client computers can access NSMXpress Series II through the Web interface, select **System Administration > WebUI Configuration**. The Allowed IP Addresses window appears as shown in Figure 40 on page 40.

Figure 40: Web Interface Access

## Maintaining NSMXpress Series II

The Maintaining section of the NSMXpress Series II navigation tree allows you to perform the tasks described in the following sections:

- Viewing System Statistics on page 40
- Upgrading the Recovery Partition on page 41

### Viewing System Statistics

To view system statistics, select **System Administration > Maintenance > System Statistics**. The system Statistics window appears as shown in Figure 41 on page 41.

Figure 41: System Statistics

### CPU

Select **CPU** to view graphs that monitor the CPU activity hourly, daily, weekly, monthly, or on a customizable basis.

### Log Rate

Select **lograte** to view graphs that monitor the log rate hourly, daily, weekly, monthly, or on a customizable basis.

### CPU Load

Select **Load** to view graphs that monitor the CPU load hourly, daily, weekly, monthly, or on a customizable basis.

### Memory Data

Select **Memory** to view graphs that monitor the memory activity hourly, daily, weekly, and monthly.

### Network Data

Select either **eth0** or **eth1** to view graphs that monitor network activity hourly, daily, weekly, and monthly.

### Process Count

Select **Process** to view graphs that monitor the number of processes hourly, daily, weekly, and monthly.

### Disk Data

Select **Disk** to view graphs that monitor the file system disk space usage hourly, daily, weekly, and monthly.

### Tile All Graphs

Select **Tile all graphs** to display all the statistical graphs for the system in one window.

## Upgrading the Recovery Partition

The recovery partition contains all files necessary to perform a clean installation of the NSMXpress Series II OS and its applications with default settings. It provides a last-resort

recovery mechanism. When the NSMXpress Series II appliance is shipped from the factory, the recovery partition files match the version of the NSMXpress Series II OS with factory default settings.

Using the Recovery Upgrade option, you can make the current version of NSMXpress Series II available for recovery, displacing the existing files in the recovery partition. The factory default recovery files are retained as an alternative recovery choice. Other versions are deleted.

Recovery upgrade uses two sets of packages to create a set of files from which you can perform a clean installation. One set makes up the NSMXpress Series II OS, the other a set of upgrade script packages. Both sets are usually retained in the local file system. The NSMXpress Series II OS set can also be downloaded from the Juniper Networks software repository.

NSMXpress Series II splits the recovery upgrade process into a preparation phase and an upgrade phase. In the preparation phase, NSMXpress Series II assembles a copy of the current version of the image files in temporary workspace. In the upgrade phase, NSMXpress Series II replaces the old recovery image files, and installs the current version of the image files from the temporary workspace into the recovery partition. By splitting the process into two phases, NSMXpress Series II minimizes the period of vulnerability while the upgrade itself takes place.

To upgrade the recovery partition, follow these steps:

1. Select **System Administration > Maintenance > Update Recovery Partition**.

If the new recovery partition files have already been prepared, then the Upgrade screen appears. Proceed with the upgrade phase as described in step 5.

If the upgrade files have not yet been prepared, the Upgrade Preparation window appears. Proceed with the preparation phase in step 2.

2. Enter the location of the NSMXpress Series II Regional server or Central Manager upgrade zip file, downloaded from the Juniper Customer Support Center when upgrading NSM, on the local file system.
3. If the NSMXpress Series II Offline server upgrade file is available on the local file system, enter the location and name of the NSMXpress Series II offline server upgrade file in the System upgrade source field. If the NSMXpress Series II offline server upgrade file is not available on the local file system and the appliance has access to the Juniper Update site, select **Online**.
4. Click **Prepare System**.

The Preparation Progress screen shows the progress of the operation.

Errors are reported if the required files are unavailable, disk space is not sufficient, or the previous version files are invalid.

When preparation is completed, the Upgrade window appears.

5. In the Upgrade window, enter the admin Web UI password and then click **Start Update**.

The upgrade process usually takes less than one minute.

**CAUTION:** Do not interrupt the upgrade process. If you do, your NSMXpress Series II appliance might not boot normally.

## Troubleshooting

Use the options in the Troubleshooting section to access the following information and utilities:

- Auditing User Operations on page 43
- Error Logs on page 45
- Network Utilities on page 45
- Tech Support on page 48

### Auditing User Operations

You can audit all user operations performed in NSMXpress Series II. Users with System Administrator and NSM administrator permissions can view all Actions Logs in NSMXpress Series II.

To view Action Audit Logs:

1. Select **Troubleshooting > Action Audit Logs**. The NSMXpress Actions Log dialog box appears. See Figure 42 on page 43.

**Figure 42: NSMXpress Actions Dialog Box**

NSMXpress Actions Log

**Search the NSMXpress log for actions ..**

<p><b>Actions by NSMXpress users</b></p>	<input checked="" type="radio"/> By any user <input type="radio"/> By user <span style="border: 1px solid #ccc; padding: 0 5px;">admin</span> <input type="radio"/> By any user except <span style="border: 1px solid #ccc; padding: 0 5px;">admin</span>
<p><b>Actions by user profile</b></p>	<input checked="" type="radio"/> By any profile <input type="radio"/> By profile <span style="border: 1px solid #ccc; padding: 0 5px;">NsmAdmin</span> <input type="radio"/> By any profile except <span style="border: 1px solid #ccc; padding: 0 5px;">NsmAdmin</span>
<p><b>Actions by authentication mechanism</b></p>	<input checked="" type="radio"/> By any authentication <input type="radio"/> By authentication <span style="border: 1px solid #ccc; padding: 0 5px;">Unix</span> <input type="radio"/> By any authentication except <span style="border: 1px solid #ccc; padding: 0 5px;">Unix</span>
<p><b>Actions in module</b></p>	<input checked="" type="radio"/> In any module <input type="radio"/> In module <span style="border: 1px solid #ccc; padding: 0 5px;">Action Audit Logs</span>
<p><b>Actions on dates</b></p>	<input type="radio"/> At any time <input checked="" type="radio"/> For today only <input type="radio"/> For yesterday only <input type="radio"/> During the last week <input type="radio"/> Between <span style="border: 1px solid #ccc; padding: 0 5px;"> </span> <span style="border: 1px solid #ccc; padding: 0 5px;">Jan</span> and <span style="border: 1px solid #ccc; padding: 0 5px;"> </span> <span style="border: 1px solid #ccc; padding: 0 5px;">Jan</span>

2. Select the Action Audit Logs that you want to view:

- **Actions by NSMXpress Users:** Select the **By any user** check box to select actions by all users. Select the **By user** check box and choose a username from the drop-down list to specify actions by a particular user. Select **By any user except** and choose a username from the drop-down list to exclude actions by a specific user.
  - **Actions by User Profile:** Select the **By any profile** check box to select actions by all user profiles. Select the **By profile** check box and choose a profile from the drop-down list to specify actions by a specific user profile. Select **By any profile except** and choose a profile from the drop-down list to exclude actions by a user profile.
  - **Actions by authentication mechanism:** Select the **By any authentication** check box to select actions by all authentication mechanisms. Select the **By authentication** check box and choose an authentication mechanism from the drop-down list to specify actions by a specific authentication mechanism. Select **By any authentication except** and choose a profile from the drop-down list to exclude actions by an authentication mechanism.
  - **Actions in module:** Select the **In any module** check box to select actions in all modules. Select the **In module** check box and choose a module from the drop-down list to specify actions in a particular module.
  - **Actions on dates:** Select the **At any time** check box to select actions at any time. Select the **For today only** check box to select today's actions. Select the **For yesterday only** check box to select yesterday's actions. Select the **During the last week** check box to select last week's actions. Select the **Between** check box and enter the start date and end date in the drop-down list to view actions within the specified time period.
3. Click **Search**. The Search Results dialog box appears with the result of your query. See Figure 43 on page 44.

Figure 43: Search Results Dialog Box

Module Index		Search Results

## Network Utilities

To access basic network utilities (ping, traceroute, and nslookup) for TCP/IP Networking, select **Troubleshooting > Network Utilities**. These tools also provide an IP subnet calculator. See Figure 46 on page 45.

Figure 46: Network Utilities Options

### Ping

Ping is a tool for checking network connectivity. NSMXpress prompts with questions so you can focus your search.

Figure 47 on page 46 shows an example.

Figure 47: Ping Utility

[Module Index](#)  
[Help..](#)

## Ping

Hostname   Verbosity Output?  Numeric Output only?  Bypass routing tables?

How many Packets?

Packet Size?

Pattern(s) to send (Hex)?

How many sec between sending each packet?

Pattern(s) to send (Hex)?

### How Many Packets

Enter the number of packets this ping command will send. The default is 5. The values range from 1 through 99.

### Packet Size

Enter the packet size (in bytes) this ping command will send. The default is 56. The values range from 1 through 9999.

### How Many Sec Between Sending Each Packet

Enter how much time (in seconds) ping should wait between sending each packet.

### Patterns to Send (Hex)

The data sent by ping contains a hexadecimal pattern. If you leave this option blank, ping will fill it with random data. This option is useful if you do not have problems with connectivity itself but with data loss.

### Verbosity Output

NSMExpress lists the ICMP packets (other than ECHO\_Response) that have been received.

### Numeric Output Only

Check this option if you do not want any attempts to be made to look up symbolic names for host addresses.

### Bypass Routing Tables

If the host is not a directly attached network, an error is returned. This option can be used to ping a local host through an interface that has no route through it.

### Traceroute

Traceroute is a tool to print the route a packet takes to a network host. See Figure 48 on page 47.

Figure 48: Traceroute Utility

[Module Index](#)  
[Help..](#)

## Traceroute

Hostname:

<input type="checkbox"/> Verbosity Output? <input type="checkbox"/> Numeric Output only? <input type="checkbox"/> Bypass routing tables? <input type="checkbox"/> Use ICMP instead of UDP? <input type="checkbox"/> Toggle Checksums? <input type="checkbox"/> Socket level debugging?	How many Hops? <input style="width: 50px;" type="text" value="30"/> Packet Length? <input style="width: 50px;" type="text" value="40"/> How many sec between sending each packet? <input style="width: 50px;" type="text" value="5"/> Initial time-to-live? <input style="width: 50px;" type="text" value="1"/> Interface: <input style="width: 50px;" type="text"/>
---	--

NOTE: The only required field is Hostname. The value can be either a hostname or an IP address.

### Lookup

Use the lookup tool to obtain the IP address from a hostname and the hostname from an IP address (see Figure 49 on page 47). The query type drop-down list contains several types of records found in the DNS database. Enter a nameserver or select the default. If you choose the default, nslookup will use the server on which NSMXpress is installed.

Figure 49: Lookup Utility

[Module Index](#)  
[Help..](#)

## Lookup

Hostname

Typ:

Nameserver:  Default

Timeout?

### IP Subnet Calculator

Use the IP subnet calculator to calculate the netmask for a TCP/IP-network. You can calculate a netmask by class and subnet bits or by the number of hosts (See Figure 50 on page 48) When you calculate a netmask by the number of hosts, NSMXpress returns the smallest network available.

Figure 50: IP Subnet Calculator

**Calculate Netmask by Class and Bits**

Class:  Subnet Bits:

---

**Calculate Netmask by Number of Hosts**

Number of Hosts:

## Tech Support

To get contact information for Juniper Networks technical support, select **Troubleshooting > Tech Support**. To help analyze problems, select a detail type in the drop-down list box, and then click **Run Tech-Support Script**. NSMXpress creates a file you can download and send to Juniper Networks technical support. See Figure 51 on page 48.

Figure 51: Juniper Tech Support

**Tech Support**

**JTAC WEBSITE:** <https://support.juniper.net>

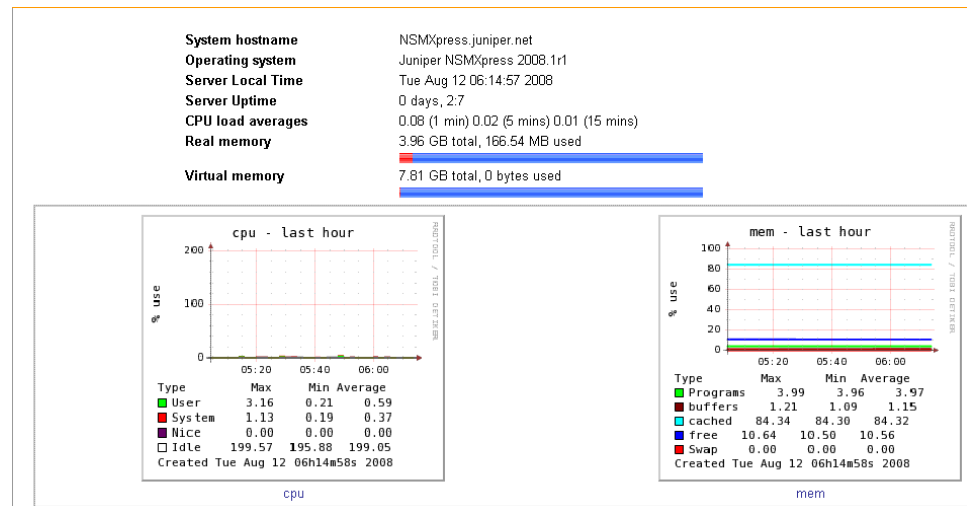

**JTAC PHONE NUMBER:** 1-888-314-JTAC

**JTAC FTP SITE:** <ftp.juniper.net>

## Viewing System Information

Use the System Information menu item to display information about the server, including CPU load and memory use, as shown in Figure 52 on page 49.

Figure 52: System Information

## Rack-Mounting the NSMXpress Series II Appliance

This section provides the types and procedures for mounting the NSMXpress Series II appliances on the Juniper UNIMOUNT rack-mount systems.

The NSMXpress Series II appliance supports the following rack types:

- 19" 4-post rack
- 19" 2-post rack

The rack-mount system is flexible and offers several options for rack-mounting the hardware. The different options include:

**NOTE:** If you are installing multiple NSMXpress Series II appliances in one rack, you should install the lowest one first and proceed upward in the rack. Install heavier NSMXpress Series II appliances in the lower part of the rack.

- Front-Mounting Flush to Rack on page 49
- Front-Mounting Recessed in Rack on page 50
- Front-Rear-Mounting Flush to Rack on page 51
- Front-Rear- Mounting Recessed in Rack on page 51
- Mid-Mount in Two Post Equipment Rack on page 52

### Front-Mounting Flush to Rack

To mount the appliance using this option:

1. Attach the chassis to the equipment rack using 4 rack-mount screws on each side of the system. See Figure 53 on page 50.

2. Verify that the mounting screws on one side of the rack are aligned with the mounting screws on the opposite side and that the appliance is level.

**Figure 53: Front-Mounting flush to rack**

### Front-Mounting Recessed in Rack

This option allows sites with no front-of-rack clearance to recess the NSMXpress Series II system in the equipment rack.

To mount the appliance using this option:

1. Remove the rear screws on each side of the system's front rails and the two small screws towards the front of the chassis.
2. Loosen the side rail screws of the chassis and slide the front rails of the system forward, as far as they will move. See Figure 54 on page 50.
3. Tighten the side rail screws. Insert the two small screws in the recessed holes on the front rails and tighten.
4. Insert 4 rack-mount screws on each side of the system to secure the chassis to the rack-mount system.
5. Verify that the mounting screws on one side of the rack are aligned with the mounting screws on the opposite side and that the appliance is level.

**Figure 54: Front-Mounting recessed in rack**

Mounting bracket, positioned forward for recessed mounting.

The recessed position allows network and console cables to be routed through the sides of the equipment rack and through the holes of the recessed front rails on either side of the unit. This enables easy cable routing on the racks with limited cable management.

### Front-Rear-Mounting Flush to Rack

This option is used for larger chassis that require additional support when mounted on the rack-mount system.

To mount NSMXpress Series II using this option:

1. Insert 4 rack-mount screws on each side of the system to secure the front of the chassis to the equipment rack.
2. Slide the rear mount rail brackets into the backs of the front rails on either side of the chassis and align with your rear equipment rack posts. Secure the rear mount rail brackets to your equipment rack with 2 rack mount screws each.
3. Insert locking screws on the sides of the rear mount brackets to secure the front and rear mounting brackets in place. See Figure 55 on page 51.
4. Verify that the mounting screws on one side of the rack are aligned with the mounting screws on the opposite side and that the appliance is level.

**Figure 55: Front-Rear-Mounting flush to rack**

### Front-Rear- Mounting Recessed in Rack

This option provides additional front clearance in the equipment rack. It is used for larger chassis, that requires additional support when mounted on the rack-mount system.

To mount the appliance using this option:

1. Remove the rear screws on each side of the system's front rails and the two small screws towards the front of the chassis.
2. Remove the rear screws on each side of the system's front rails and the two small screws towards the front of the chassis.
3. Tighten the side rail screws. Insert the two small screws in the recessed holes on the front rails and tighten.

4. Slide the rear mount rail brackets into the backs of the front rails on either side of the chassis and align with your rear equipment rack posts. Secure the rear mount rail brackets to your equipment rack with 2 rack mount screws each. See Figure 56 on page 52.
5. Insert locking screws on the sides of the rear mount brackets to secure the front and rear mounting brackets in place.
6. Verify that the mounting screws on one side of the rack are aligned with the mounting screws on the opposite side and that the appliance is level.

**Figure 56: Front-Rear-Mounting recessed in rack**

Mounting bracket, positioned forward for recessed mounting.

The recessed position allows network and console cables to be routed through the sides of the equipment rack and through the holes of the recessed front rails on either side of the unit. This enables easy cable routing on the racks with limited cable management.

### Mid-Mount in Two Post Equipment Rack

This option is suitable for a two post equipment rack. It allows the appliance to be mid-mounted so that there is even clearance on the front and rear of the rack.

To mount the appliance using this option:

1. Remove the two front mount rails from either side of the chassis.
2. Insert one mid-mount bracket to the center on either side of the chassis.
3. Attach the chassis to the equipment rack and insert the other two mid-mount brackets on either side of the system to secure the chassis to the backs of the post. See Figure 57 on page 53.
4. Verify that the mounting screws on one side of the rack are aligned with the mounting screws on the opposite side and that the appliance is level.

Figure 57: Mid-Mount in two post equipment rack

Attach the front bracket to the chassis, and secure the chassis to the post. Attach the rear bracket to the other side of the post, and secure the chassis to the rear bracket, adjusting the bracket width as needed.

## List of Technical Publications

Table 6 on page 53 describes the documentation for NSMXpress and NSM.

**Table 6: Network and Security Manager Publications**

Book	Description
<i>Network and Security Manager Installation Guide</i>	Describes the steps to install the NSM management system on a single server or on separate servers. It also includes information on how to install and run the NSM user interface. This guide is intended for IT administrators responsible for the installation or upgrade of NSM.
<i>Network and Security Manager Administration Guide</i>	Describes how to use and configure key management features in the NSM. It provides conceptual information, suggested workflows, and examples. This guide is best used in conjunction with the NSM Online Help, which provides step-by-step instructions for performing management tasks in the NSM user interface (UI).  This guide is intended for application administrators or those individuals responsible for owning the server and security infrastructure and configuring the product for multiuser systems. It is also intended for device configuration administrators, firewall and VPN administrators, and network security operation center administrators.
<i>Network and Security Manager Configuring ScreenOS and IDP Devices Guide</i>	Describes NSM features related to device configuration and management. It also explains how to configure basic and advanced NSM functionality, including deploying new device configurations, managing security policies and VPNs, and general device administration.

Table 6: Network and Security Manager Publications (*continued*)

Book	Description
<i>Network and Security Manager Online Help</i>	Provides procedures for basic tasks in the NSM user interface. It also includes a brief overview of the NSM system and a description of the GUI elements.
<i>Network and Security Manager API Guide</i>	Provides complete syntax and a description of the Simple Object Access Protocol (SOAP) messaging interface to NSM.
<i>Network and Security Manager Release Notes</i>	<p>Provides the latest information about features, changes, known problems, resolved problems, and system maximum values. If the information in the Release Notes differs from the information found in the documentation set, follow the Release Notes.</p> <p>Release Notes are included on the corresponding software CD and are available on the Juniper Networks Website.</p>
<i>NSMExpress and NSM3000 User Guide</i>	Describes how to set up and manage the NSM appliances as a central manager or regional server.
<i>NSMExpress Series II User Guide</i>	Describes how to set up and manage the NSMExpress Series II appliance as a central manager or regional server.
<i>Network and Security Manager Configuring Infranet Controllers Guide</i>	Provides details about configuring the device features for all supported Infranet Controllers.
<i>Network and Security Manager Configuring Secure Access Devices Guide</i>	Provides details about configuring the device features for all supported Secure Access Devices.
<i>Network and Security Manager Configuring EX Series Switches Guide</i>	Provides details about configuring the device features for all supported EX Series platforms.
<i>Network and Security Manager Configuring J Series Services Routers and SRX Series Services Gateways Guide</i>	Provides details about configuring the device features for all supported J Series Services Routers and SRX Series Services Gateways.
<i>Network and Security Manager M Series and MX Series Devices Guide</i>	Provides details about configuring the device features for M Series and MX Series platforms.

## Requesting Technical Support

Technical product support is available through the Juniper Networks Technical Assistance Center (JTAC). If you are a customer with an active J-Care or JNASC support contract, or are covered under warranty, and need post-sales technical support, you can access our tools and resources online or open a case with JTAC.

- JTAC policies—For a complete understanding of our JTAC procedures and policies, review the JTAC User Guide located at <http://www.juniper.net/us/en/local/pdf/resource-guides/7100059-en.pdf> .
- Product warranties—For product warranty information, visit <http://www.juniper.net/support/warranty/> .
- JTAC hours of operation—The JTAC centers have resources available 24 hours a day, 7 days a week, 365 days a year.

## Self-Help Online Tools and Resources

For quick and easy problem resolution, Juniper Networks has designed an online self-service portal called the Customer Support Center (CSC) that provides you with the following features:

- Find CSC offerings: <http://www.juniper.net/customers/support/>
- Search for known bugs: <http://www2.juniper.net/kb/>
- Find product documentation: <http://www.juniper.net/techpubs/>
- Find solutions and answer questions using our Knowledge Base: <http://kb.juniper.net/>
- Download the latest versions of software and review release notes: <http://www.juniper.net/customers/csc/software/>
- Search technical bulletins for relevant hardware and software notifications: <https://www.juniper.net/alerts/>
- Join and participate in the Juniper Networks Community Forum: <http://www.juniper.net/company/communities/>
- Open a case online in the CSC Case Management tool: <http://www.juniper.net/cm/>

To verify service entitlement by product serial number, use our Serial Number Entitlement (SNE) Tool: <https://tools.juniper.net/SerialNumberEntitlementSearch/>

## Opening a Case with JTAC

You can open a case with JTAC on the Web or by telephone.

- Use the Case Management tool in the CSC at <http://www.juniper.net/cm/> .
- Call 1-888-314-JTAC (1-888-314-5822 toll-free in the USA, Canada, and Mexico).

For international or direct-dial options in countries without toll-free numbers, see <http://www.juniper.net/support/requesting-support.html> .
