

# Security Intelligence QuickStart

## Service Overview

Companies struggle to keep pace with the increasing volume and sophistication of cyberattacks, particularly those aimed at Web applications and servers, which deal in high-value traffic and reside in data centers.

Juniper Networks Junos WebApp Secure and Junos DDoS Secure are critical components of a defense-in-depth solution. They protect against those attacks, requiring security systems that incorporate real-time, definitive, and actionable intelligence about attackers.

The Juniper Networks Security Intelligence QuickStart service provides the expert assistance of an onsite Professional Services engineer so you get the most value from your investment.

## Service Description

Juniper Networks® Junos® WebApp Secure is a comprehensive Web intrusion deception solution that detects, tracks, profiles, and prevents attacks in real time. Juniper Networks Junos DDoS Secure is specifically designed to defend websites against flood and application-layer distributed denial-of-service attacks.

The Security Intelligence QuickStart service provides basic installation planning, implementation of the solution, and is delivered via a logical, three-phase process: Plan (Design and Requirements review), Build (Configure Security Intelligence QuickStart solution), and Operate (Knowledge transfer with integrated workflow review).

### Phase 1: Plan

Analyze information including your topology, application, and user requirements to develop recommendations regarding deployment method, high availability (HA) options, product integration, and any special circumstances.

### Phase 2: Build

Configure the Junos WebApp Secure or Junos DDoS Secure appliance(s) for use in the production environment and to help your technical staff become familiar with the setup and operation of Junos WebApp Secure or Junos DDoS Secure.

### Phase 3: Operate

Review the configuration and performs a knowledge transfer session of the Junos WebApp Secure or Junos DDoS Secure solution for your personnel. The knowledge transfer session includes demonstration and discussion of the following:

- Basic configuration techniques
- Processes to protect additional applications
- Basic tuning and day-to-day operational processes

## Service Deliverables

By the end of this service, you have a Juniper Networks Junos WebApp Secure (or Junos DDoS Secure) platform protecting at least one client-defined application, and your team is ready to manage basic configuration requirements and understand the processes necessary to protect other applications.

## Service Features and Benefits

Feature	Feature Description	Benefit
Requirements gathering	Juniper's network consultants conduct requirements gathering to capture your detailed needs, including specific business, future growth, and technical requirements.	<ul style="list-style-type: none"> <li>Allows you to take advantage of the skills and experience our network consultants have acquired by working with hundreds of clients.</li> </ul>
Solution design and implementation and migration planning	Juniper's strategic solution consulting can help develop the design of your solution based on your requirements and network assessment results and also can provide assistance with your network implementation planning.	<ul style="list-style-type: none"> <li>Optimizes your staff's time by using Juniper's network consultants to define the new solution design, architectural findings, or other network enhancement planning.</li> <li>Accelerates and optimizes the time to value of your Juniper solution</li> </ul>
Project management input for Juniper service deliverables	Juniper assigns a Professional Services project manager to serve as a single point of contact and assist with the administration and management of Juniper service deliverables.	<ul style="list-style-type: none"> <li>Reduces the risk to your project by engaging experienced project management capabilities, which help determine and track tasks, dependencies, responsibilities, timelines, and milestones.</li> </ul>
Knowledge transfer	The Professional Services engineer covers topics such as basic configuration and troubleshooting and feature configuration.	<ul style="list-style-type: none"> <li>Accelerates availability of the solution.</li> <li>Accelerates readiness of employees for improved operational efficiencies.</li> </ul>

## Exclusions

The scope of this service is for one application to be protected by Junos WebApp Secure or one stream protected by Junos DDoS Secure. If you require additional services of the Juniper consultant, or additional platforms/applications, then a customized engagement can be defined.

## Juniper Networks Professional Services

As leaders in networks and security, our Professional Services consultants and engineers are uniquely qualified to assist service providers in designing, implementing, and optimizing network solutions.

Juniper Networks provides additional consulting services to consider along with the Security Intelligence QuickStart service. A broad range of consulting and packaged services is available to help you enhance your network design and optimize your production environment.

## Juniper Networks Services and Support

Juniper Networks is the leader in performance-enabling services that are designed to accelerate, extend, and optimize your high-performance network. Our services allow you to maximize operational efficiency while reducing costs and minimizing risk, achieving a faster time to value for your network. Juniper

Networks ensures operational excellence by optimizing the network to maintain required levels of performance, reliability, and availability. For more details, please visit [www.juniper.net/us/en/products-services](http://www.juniper.net/us/en/products-services).

## Ordering Information

The Juniper Networks Security Intelligence QuickStart service is available worldwide. Please contact your Juniper Networks account manager.

The Security Intelligence QuickStart service can be ordered using the part number shown in the following table. Before the service begins, a statement of work (SOW) is established that outlines the scope of effort to be performed.

Model Number	Description
PRO-DEPLOY	Security Intelligence QuickStart service

## About Juniper Networks

Juniper Networks is in the business of network innovation. From devices to data centers, from consumers to cloud providers, Juniper Networks delivers the software, silicon and systems that transform the experience and economics of networking. The company serves customers and partners worldwide. Additional information can be found at [www.juniper.net](http://www.juniper.net).
