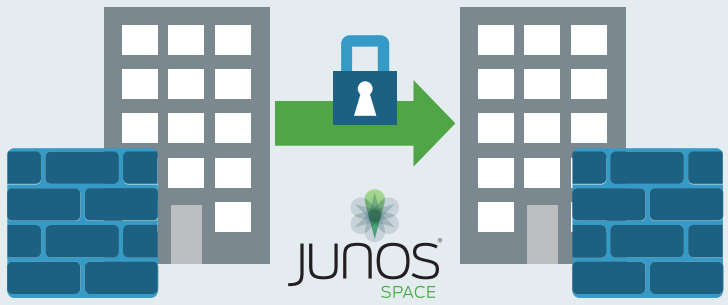
Junos® Space Security Director

The new enhanced Security Director user interface provides application visibility and actionable intelligence

Junos Space Security Director is a central policy engine for physical and virtual firewalls (SRX Series and vSRX). The dashboard allows easy navigation between various network status indicators and device-related information to create a custom view of your network's SRX Series security environment.

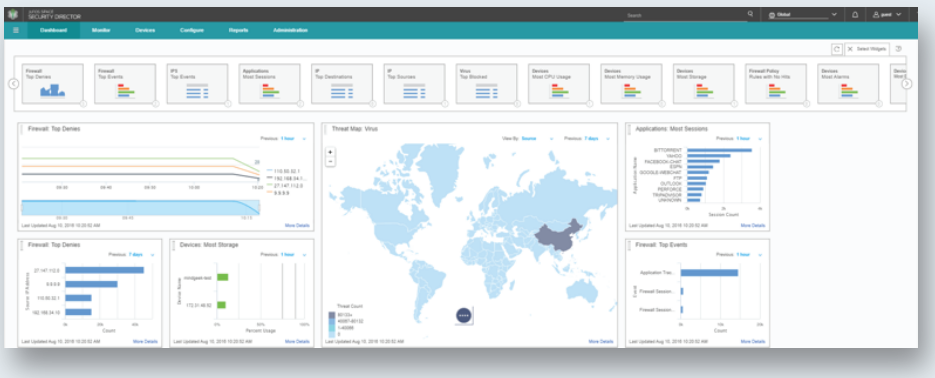


A Live Threat Map

Security Director's live threat maps lets you see the attack vectors for any active IPS and virus attacks, and zoom in for filtered threat view details. You can drill down into insight bars for more status info and to view data by source, by destination addresses, or by adjustable time spans.

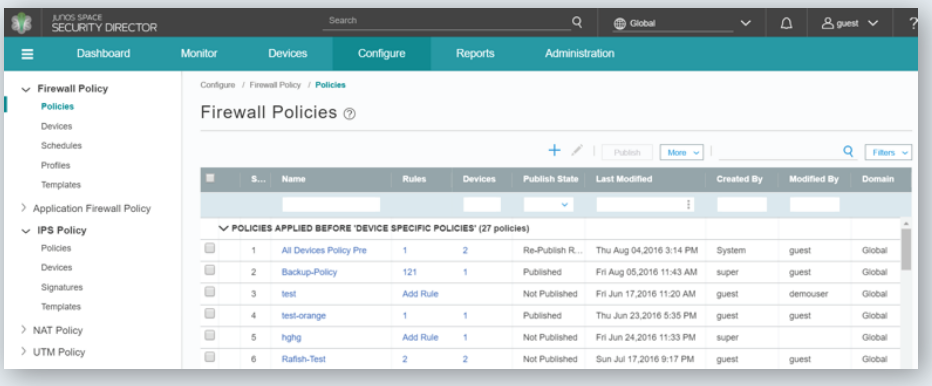
A Configurable Dashboard

With Security Director you simply drag widgets from the ribbon onto the workspace to configure the widget parameters, and then view the results in a variety of interactive maps. Customize your network timelines and drill down with pre-filtered events.



An Intelligent Policy Manager

Security Director policy management records the published state of policies, as well as when they were modified and who made the modification. Also, a rule-creation wizard includes placement suggestions for placing rules within the active policy, and also rule analysis to help eliminate unused rules.

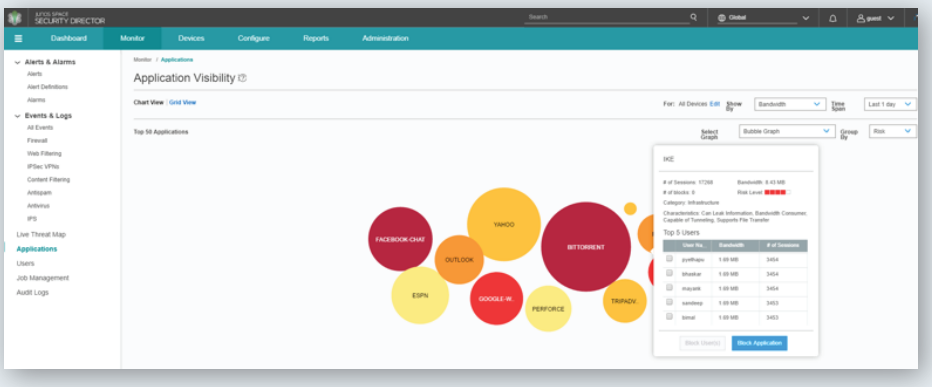


An Integrated Logging and Reporting Environment

Security Director provides a live graphical view of all of the events reported by your managed firewalls, so you can make accurate assessments about the traffic and devices in your network. You can toggle between summaries and details, or monitor event status for any feature you customize.

A Window on Application and User Visibility

With Security Director, administrators can select one or more applications or user groups and take immediate action. Security Director automatically creates the requested rule or rules and deploys them in the optimal location within the rules base, avoiding anomalies when managing the application and user environment.



A Mobile App for Constant Access

Download the Juniper Security Director app from the Apple Store or Android Store and get mobile access to your server. Monitor all the functionality provided by the equivalent desktop. You also get alerts and messages, and you can email other administrators who have Security Director access.
