NFX Series Network Services Platform

Product Overview

The NFX Series Network Services Platform delivers a flexible, secure, on-demand network service experience to enterprise organizations. An integral part of Juniper’s fully automated software-defined WAN (SD-WAN), secure router, and Cloud CPE solutions, this high-performance universal CPE platform delivers dynamic SD-WAN functionality with Zero Touch Provisioning (ZTP), next-generation network security, and a portfolio of managed services.

The NFX Series supports multiple Juniper and third-party VNFs on a single device, enabling enterprise customers to accelerate application deployment across geographical locations with a single, automated, highly scalable solution.

Product Description

The Juniper Networks® NFX Series Network Services Platform includes the NFX150 and NFX250, offering secure, standards-compliant, redundant customer premises devices that simplify the creation and delivery of network services. This enables service providers to deliver innovative managed services with agility and scale, while allowing enterprises to automate and accelerate branch network connectivity.

More than ever, enterprises rely on the Internet to support their business operations. This increasing dependence on the Internet to access geographically distributed data centers and the multitude of mission-critical cloud-based applications has made branch offices difficult to manage, maintain, and upgrade. Rapid business expansion, both local and international, also creates new challenges for branch office deployment and connectivity. Enterprises require a solution that can create branches on demand, accelerate service deployment, and instantly apply business updates and security policies consistently across a diverse and growing number of business applications and branch locations.

While traditional customer premises equipment (CPE) devices have served the market well for years, many of these devices are closed, Layer 2 purpose-built platforms that do not provide the flexibility, agility, reliability, or scalability required to support a flexible cloud deployment. As a result, these devices often inhibit innovation and complicate or, even worse, restrict the ability to automate configuration and provisioning management.

The NFX Series highly scalable, open, and secure customer premises devices work with Juniper Contrail® Service Orchestration to deliver fully automated SD-WAN, secure router, and Cloud CPE solutions. Whether you are an enterprise business or a service provider, this automated, software-driven solution dynamically provisions new services, enabled by Juniper or third-party virtualized network functions (VNFs), on demand, resulting in near instantaneous service delivery. Its Zero Touch Provisioning (ZTP) capability greatly simplifies branch network connectivity for initial deployment and ongoing management. Subsequent service updates and policy changes are consistently and dynamically inserted into the existing device, resulting in operational efficiency for service providers and enterprise customers alike by limiting or even eliminating service interruptions and business disruptions.

The NFX Series empowers service providers to improve overall operational efficiency and service agility. It delivers a platform to the enterprise that can support multiple managed services, such as SD-WAN, managed security, managed Wi-Fi, and managed WAN acceleration, which can all be delivered and managed from the cloud. Fully integrated with the Juniper Networks SRX Series Services Gateways, which are high-performance next-generation firewalls (NGFWs), the NFX Series devices can be deployed as secure router platforms, ensuring the security of the platform itself and the services it delivers. Built with industry-standard interfaces, the NFX Series can also be used with third-party management and orchestration solutions. Additionally, the NFX Series supports multiple connectivity options such as broadband Internet, 4G/LTE, traditional MPLS, ADSL2/ VDSL2, and more. As service providers look to evolve their service portfolios, the NFX Series can evolve with them, transitioning from a virtual network services platform to an
application services platform, supporting the delivery of a wide array of application-based network services, such as market data caching, Internet of Things (IoT) gateway, and edge computing.

The NFX150 Network Services Platform delivers versatility, agility, and scale to enterprise organizations and service providers. Its two form factors, compact (desktop) and rack-mount, integrated SRX Series NGFW, and 4G/LTE interface options, make it a great choice for secure SD-WAN, secure router, and managed security use cases.

The NFX250 Network Services Platform delivers capacity, performance, and scale to larger enterprise organizations and service providers who are looking to run multiple services on one platform. The NFX250 family provides greater VNF capacity and is integrated with Juniper Networks vSRX Virtual Firewall for the secure delivery of SD-WAN, secure router, and a broad portfolio of managed services.

Architecture and Key Components
The NFX Series Network Services Platform leverages IP and virtualization technologies as the cornerstones of automated, on-demand branch creation and rapid service delivery solutions. Based on field-proven Juniper technology, including open architectures and the Juniper Networks Junos® operating system, the NFX Series delivers high performance and scalability for routing, switching, and security applications. The NFX Series devices are a key component of the Juniper Contrail SD-WAN and Cloud CPE solutions, which also include the following products and technologies:

• **SD-WAN** functionality: The NFX Series efficiently utilizes links across the enterprise WAN, blending traditional MPLS with other connectivity options such as broadband Internet, 4G, LTE, ADSL2+/VDSL2, and more. Policy and application-based forwarding capabilities enforce business rules set by the enterprise to steer application traffic towards a preferred path.

• **Secure router (integrated security):** The NFX Series provides the same high-performance NGFW capabilities as the Juniper Networks SRX Series Services Gateways, providing next-generation security, IPsec connectivity, application detection, and filtering for malicious traffic without sacrificing reliability, visibility, or policy control. This functionality is a component of the NFX150 platforms, while it is provided as a VNF by the vSRX for the NFX250 platforms.

• **Contrail Service Orchestration:** Juniper Contrail Service Orchestration is a comprehensive management and orchestration solution that delivers VNFs to the NFX Series platforms. It works with the NFX Series to deliver Juniper Contrail SD-WAN, a comprehensive SD-WAN solution for enterprises and service providers. A simple GUI customer portal offers service providers the flexibility to select and build customized services from a catalog, or work with third-party VNF suppliers to build a catalog of their own.

Contrail Service Orchestration automates service activation and provisions newly requested services instantaneously under an open NFV environment.

• **Virtualized network functions:** The NFX Series is capable of hosting and chaining multiple network functions on a single platform. It supports multiple VNFs, including the vSRX Virtual Firewall, the industry’s most efficient and full-function virtualized security appliance.¹

• **Wireless support:** Specific NFX150 models support wireless 4G/LTE connectivity, enabling enterprises and service providers to activate the platform in new locations quickly and seamlessly. In new deployments, it can provide network connectivity before other network connection services become available. The wireless network connection can be the primary network connection or one of multiple transport paths.

• **Cloud CPE:** The NFX Series platforms are universal CPE platforms, built for the delivery of virtual managed services. When used with the Juniper Cloud CPE solution, service providers can use the graphic service design and management tools to create new services as quickly as business requirements emerge. The NFX Series supports a variety of flexible deployments: a distributed services deployment model ensures high availability, performance, and compliance, while a hybrid model provides versatility and cost efficiency for branch connectivity. These flexible deployment models provide freedom of choice, helping enterprise customers with ever-growing business requirements and branch expansions.

• **Open framework:** The NFX Series is based on an open framework providing the same service consistency and operational model found in the telco cloud. The open framework supports industry standards, protocols, and seamless API integration.

Features and Benefits

**VNF Flexibility**
Unlike traditional CPE devices that inhibit agility, the NFX Series is highly scalable, supporting multiple concurrent VNFs on a single device. This substantially reduces upfront CapEx and software costs, establishing a flexible consumption model for on-demand network services from the cloud. The NFX Series features Open vSwitch, an open-source network automation and switching framework that intelligently manages service chaining. Open vSwitch effectively optimizes data traffic flow within the NFX Series platforms, providing consistent VNF service functions and improving performance to minimize service interruptions.

**Security and Reliability**
The NFX Series incorporates many advanced security features. The Secure Boot feature ensures that only an authentic, unmodified Junos OS can launch at boot time, safeguarding system integrity from factory to the branch site. The embedded

¹SRX Series next-generation firewall software is fully integrated with the NFX Series product family. The vSRX software runs on the NFX250 platform as a VNF, while the SRX Series software is fully integrated into the NFX150.
Trusted Platform Module (TPM) ensures platform integrity and provides entropy for cryptographic operations. It also provides the same security: IPSec connectivity, applications detection, and filtering for malicious traffic without sacrificing reliability, visibility, or policy control, as found in the SRX Series high-performance NGFWs. This functionality is a standard component of the NFX150, while provided as a VNF by the vSRX in the NFX250.

High Availability
The NFX Series high availability (HA) redundancy features provide both enterprises and service providers the peace of mind that comes from knowing their networks will scale without affecting performance or reliability. With link redundancy, the NFX Series can address many common causes of system failures, such as a physical port going bad or someone inadvertently disconnecting a cable, to ensure that a connection is available without having to fail over the entire system. When NFX Series platforms are configured in a dual CPE cluster as an active/active high-availability pair, their traffic and configuration information, including routing and FIB tables, are mirrored automatically to provide active firewall and VPN session maintenance in case of a failure. The NFX Series platforms synchronize both configuration and runtime information. As a result, during failover, synchronization of the following information is shared: connection/session state and flow information, IPSec security associations, Network Address Translation (NAT) traffic, address book information, configuration changes, and more. NFX250 offers high availability on link, CPE, and/or vSRX VNF failovers.²

Zero Touch Provisioning
When bringing up a new network device in a remote office or branch, it can be costly to dispatch resources to provision equipment. With Zero Touch Provisioning (ZTP), all new devices connected to the ZTP environment can function without any manual CLI or GUI intervention. The network device simply needs to be connected and turned on. This is useful when technical staff is limited or unavailable at customer premises locations.

The ZTP process is simple. First, the service provider registers the NFX Series platform via the service activation portal, guaranteeing their customer a seamless activation experience. Once the platform is registered, it is ready for customer delivery and self-activation. Upon receiving the device, the customer simply needs to apply power and connect it to the Internet; the NFX Series platform will then securely boot its software, self-upgrade (if necessary), download its customer-specific configuration, and self-provision all services through a secure connection with Contrail Service Orchestration. In a matter of minutes the device is fully activated; services are enabled, and the customer is ready for business.

Cost Efficiencies
The NFX Series improves the overall cost efficiency of the enterprise WAN by supporting SD-WAN and a broad portfolio of managed services as a component of the Juniper Cloud CPE solution. CapEx efficiency is enhanced where a single and scalable NFX Series platform replaces multiple on-premises devices. OpEx efficiency is achieved through automation, which simplifies operations and eliminates the extensive manual processes required by traditional CPE devices. Cost efficiencies help enterprise customers achieve operational agility and boost profitability.

Agility
Enterprise business requirements are always evolving, reflecting constantly changing market dynamics and seasonality. The NFX Series devices let enterprise customers select and automatically implement new services and applications from an extensive service catalog in real time, fostering collaboration across branch sites to improve overall productivity.

### Table 1. NFX Series Features and Benefits

<table>
<thead>
<tr>
<th>Features</th>
<th>Benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>SD-WAN functionality effectively allocates workloads across the enterprise WAN.</td>
<td>Efficient utilization of links across the enterprise WAN leverage policy-based routing, blending traditional MPLS with other connectivity options such as broadband Internet, 4G/LTE, ADSL2/VDLSL, and more.</td>
</tr>
<tr>
<td>The NFX Series provides the same high-performance NGFW security services found in the physical SRX Series Services Gateways.</td>
<td>The SRX Series next-generation firewall software comes fully integrated with the NFX150. The vSRX virtual firewall is a comprehensive virtual security and routing solution that enables the NFX250 to deliver the highest possible performance across branch locations. Use the integrated vSRX/SRX Series software to secure the WAN and the LAN, and to deliver-value-added managed security services.</td>
</tr>
<tr>
<td>Seamless integration with Contrail Service Orchestration ensures automated management and a consistent service lifecycle experience.</td>
<td>Service chaining and delivery can be automated on demand, increasing revenue-generating service delivery opportunities.</td>
</tr>
<tr>
<td>Network Service Activator enables fast device discovery and provisioning.</td>
<td>Automated configuration eliminates complex device setup and delivers a plug-and-play experience.</td>
</tr>
<tr>
<td>DPDK and Single Root I/O Virtualization (SR-IOV) harness high performance from the Intel x86 processor.¹</td>
<td>DPDK enables fast packet processing of networking applications by providing a framework for Intel x86 processors. SR-IOV allows VNFs to bypass the hypervisor to directly access resources on the CPU network interface, significantly boosting I/O performance.</td>
</tr>
</tbody>

### Packet Switching Capacities

- Packet Forwarding Engine (PFE) capacity: 64 Gbps
- VNF capacity: 20 Gbps full-duplex path to CPU for VNF traffic
- Throughput via VNFs will vary depending on network function and acceleration technologies supported

### Layer 2 Switching

- Maximum media access control (MAC) addresses in hardware: up to 16,000
- Jumbo frames: 9216 bytes
- Number of VLANs: up to 1024 (VLAN IDs: 4096)
- Port-based VLAN
- MAC-based VLAN
- Voice VLAN
- Private VLAN (PVLAN)
- Number of MST instances supported: 64
- Compatible with Per-VLAN Spanning Tree Plus (PVST+)
- Routed VLAN interface (RVI)
- Link Layer Discovery Protocol–Media Endpoint Discovery (LLDP-MED) with VoIP integration

### Routing Protocols

- IPv4, IPv6, ISO, Connectionless Network Service (CLNS)
- Static routes
- RIP v1/v2
- OSPF/OSPF v3
- BGP with Route Reflector
- Multicast: Internet Group Management Protocol (IGMP) v1/v2, Protocol Independent Multicast (PIM) sparse mode (SM)/dense mode (DM)/source-specific multicast (SSM), Session Description Protocol (SDP), Distance Vector Multicast Routing Protocol (DVMRP), Multicast Source Discovery Protocol (MSDP), Reverse Path Forwarding (RPF)
- Encapsulation: VLAN, Point-to-Point Protocol (PPP), Frame Relay, High-Level Data Link Control (HDLC), serial, Multilink Point-to-Point Protocol (MLPPP), Multilink Frame Relay (MLFR), and Point-to-Point Protocol over Ethernet (PPPoE)
- Virtual routers
- Policy-based routing, source-based routing
- Equal-Cost Multipath (ECMP)

†This data is for NFX250 only
VPN Features
- Tunnels: Generic routing encapsulation (GRE)3, IP-IP3, IPsec
- Site-site IPsec VPN
- IPsec crypto algorithms: Data Encryption Standard (DES), triple DES (3DES), Advanced Encryption Standard (AES-256), AES-GCM
- IPsec authentication algorithms: MD5, SHA-1, SHA-128, SHA-256
- Perfect forward secrecy, anti-reply
- IPv4 and IPv6 IPsec VPN
- Multiproxy ID for site-site VPN
- Internet Key Exchange (IKEv1, IKEv2), NAT-T
- Virtual router and quality-of-service (QoS) aware
- Standard-based dead peer detection (DPD) support
- VPN monitoring

Advanced Routing Services
- MPLS (RSVP, LDP)
- Circuit cross-connect (CCC), translational cross-connect (TCC)
- L2/L3 MPLS VPN
- Virtual private LAN service (VPLS), next-generation multicast VPN (NG-MVPN)
- MPLS traffic engineering and MPLS fast reroute

Access Control Lists (Junos OS Firewall Filters)
- Port-based ACL (PACL)—ingress
- VLAN-based ACL (VACL)—ingress and egress
- Router-based ACL (RAACL)—ingress and egress
- ACL entries (ACE) in hardware per system: 1500
- ACL counter for denied packets
- ACL counter for permitted packets
- Ability to add/remove/change ACL entries in middle of list (ACL editing)
- L2-L4 ACL

Security
- MAC limiting
- Allowed MAC addresses—configurable per port
- Sticky MAC (persistent MAC address learning)
- Dynamic ARP inspection (DAI)
- Proxy ARP
- Static ARP support
- Dynamic Host Configuration Protocol (DHCP) snooping

High Availability
- VRRP
- Backup link via 3G/4G LTE wireless or other WAN (NFX150)
- Stateful failover and dual CPE clustering†
- Active/active—L3 mode
- Active/passive—L3 mode
- Configuration synchronization

†This data is for NFX250 only

Quality of Service (QoS)
- Layer 2 QoS
- Layer 3 QoS
- Ingress policing: 1 rate 2 color
- Hardware queues per port: 8
- Scheduling methods (egress): Strict priority (SP), shaped-deficit weighted round-robin (SDWRR)
- 802.1q: DiffServ code point (DSCP)/IP precedence trust and marking
- L2-L4 classification criteria: Interface, MAC address, Ethertype, 802.1p, VLAN, IP address, DSCP/IP precedence
- TCP/UDP port numbers
- Congestion avoidance capabilities: Tail drop

Multicast
- Internet Group Management Protocol (IGMP) snooping entries: 1000
- IGMP: v1, v2, v3
- IGMP snooping
- PIM-SM

Services and Manageability
- Junos OS CLI
- Web interface (J-Web)
- Out-of-band management: Serial, 10/100BASE-T Ethernet
- ASCII configuration
- Rescue configuration
- Configuration rollback
- Simple Network Management Protocol (SNMP): v1, v2c, v3
- Remote monitoring (RMON) (RFC 2819) Groups 1, 2, 3, 9
- Network Time Protocol (NTP)
- DHCP server
- DHCP client and DHCP proxy
- DHCP relay and helper
- RADIUS authentication
- TACACS+ authentication
- SSHv2
- Secure copy
- HTTP/HTTPS
- Domain Name System (DNS) resolver
- System logging
- Temperature sensor
- Configuration backup via FTP/secure copy
- Interface range
Troubleshooting

- Debugging: CLI via console, telnet, or SSH
- Diagnostics: Show and debug command statistics
- Traffic mirroring (port)
- Traffic mirroring (VLAN)
- ACL-based mirroring
- Mirroring destination ports per system: 1
- LAG port monitoring
- Multiple destination ports monitored to 1 mirror (N:1)
- Maximum number of mirroring sessions: 1
- Mirroring to remote destination (over L2): 1 destination VLAN
- IP tools: Extended ping and trace
- Juniper Networks commit and rollback

Environmental Ranges NFX250

- Operating temperature: 32°C to 122°F (0°C to 50°C)
- Storage temperature: -40°C to 158°F (-40°C to 70°C)
- Operating altitude: Up to 10,000 ft. (3,048 m)
- Relative humidity operating: 5 to 90% (noncondensing)
- Relative humidity nonoperating: 5 to 90% (noncondensing)
- Seismic: Designed to meet Zone 4 earthquake requirements

Safety and Compliance

Safety

- cNRTL-UL60950-1 (Second Edition)
- C-UL to CAN/CSA 22.2 No.60950-1 (Second Edition)
- TUV/GS to EN 60950-1 (Second Edition)
- CB-IEC60950-1 (Second Edition with all country deviations)
- EN 60825-1 (Second Edition)

Electromagnetic Compatibility

- FCC 47CFR Part 15 Class A
- EN 55022 Class A
- ICES-003 Class A
- VCCI Class A
- AS/NZS CISPR 32 Class A
- CISPR 22 Class A, CISPR 32 Class A
- EN 55024
- EN 300386
- CE

Environmental Compliance

- Restriction of Hazardous Substances (ROHS) 6/6
- ROHS 7a exemption for power supply components acceptable
- Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH)
- Waste Electronics and Electrical Equipment (WEEE)

Telco

- Common Language Equipment Identifier (CLEI) code

Standards Compliance

IEEE Standards

- IEEE 802.1AB: Link Layer Discovery Protocol (LLDP)
- IEEE 802.1ag: Connectivity Fault Management (CFM)
- IEEE 802.1ak: Multiple VLAN Registration Protocol (MVRP)
- IEEE 802.1ID: Spanning Tree Protocol
- IEEE 802.1p: CoS prioritization
- IEEE 802.1Q: VLAN tagging
- IEEE 802.1Q-in-Q: VLAN Stacking
- IEEE 802.1w: Rapid Spanning Tree Protocol (RSTP)
- IEEE 802.1s: Multiple Spanning Tree Protocol (MSTP)
- IEEE 802.1X: Port Access Control
- IEEE 802.3: 10BASE-T

*** Copper SFP modules are not supported on the NFX150 platforms at this time
IEEE 802.3u: 100BASE-T
IEEE 802.3ab: 1000BASE-T
IEEE 802.3z: 1000BASE-X
IEEE 802.3x: Pause Frames/Flow Control
IEEE 802.3ad: Link Aggregation Control Protocol (LACP)
IEEE 802.3ah: Ethernet in the First Mile

Supported RFCs
- RFC 768 UDP
- RFC 783 Trivial File Transfer Protocol (TFTP)
- RFC 791 IP
- RFC 792 ICMP
- RFC 793 TCP
- RFC 826 ARP
- RFC 894 IP over Ethernet
- RFC 903 Reverse ARP (RARP)
- RFC 906 TFTP Bootstrap
- RFC 951, 1542 BootP
- RFC 1058 ARP
- RFC 1112 IGMP v1
- RFC 1122 Host requirements
- RFC 1256 IPv4 ICMP Router Discovery (IRDP)
- RFC 1492 TACACS+
- RFC 1519 Classless Interdomain Routing (CIDR)
- RFC 1587 OSPF not-so-stubby area (NSSA) Option
- RFC 1591 Domain Name System (DNS)
- RFC 1812 Requirements for IP Version 4 routers
- RFC 2030 SNTP, Simple Network Time Protocol
- RFC 2068 HTTP server
- RFC 2131 BOOTP/DHCP relay agent and dynamic host
- RFC 2138 RADIUS authentication
- RFC 2139 RADIUS accounting
- RFC 2267 Network ingress filtering
- RFC 2338 Virtual Router Redundancy Protocol (VRRP)
- RFC 2362 PIM-SM (edge mode)
- RFC 2453 RIP v2
- RFC 2474 Definition of the Differentiated Services Field in the IPv4 and IPv6 Headers
- RFC 2597 Assured Forwarding PHB (per-hop behavior) Group
- RFC 2598 An Expedited Forwarding PHB
- RFC 2925 MIB for remote ping, trace
- RFC 3176 sFlow
- RFC 3569 SSM
- RFC 5176 Dynamic Authorization Extensions to RADIUS
- RFC 5880 Bidirectional Forwarding Detection (BFD)

Supported MIBs
- RFC 1155 SMI
- RFC 1157 SNMPv1
- RFC 1212, RFC 1213, RFC 1215 MIB-II, Ethernet-Like MIB and TRAPs
- RFC 1901 Introduction to Community-based SNMPv2
- RFC 2011 SNMPv2 for Internet protocol using SMIPv2
- RFC 2012 SNMPv2 for transmission control protocol using SMIPv2
- RFC 2013 SNMPv2 for user datagram protocol using SMIPv2
- RFC 2233 The Interfaces Group MIB using SMIPv2
- RFC 2287 System Application Packages MIB
- RFC 2570 Introduction to Version 3 of the Internet-standard Network Management Framework
- RFC 2571 An Architecture for describing SNMP Management Frameworks (read-only access)
- RFC 2572 Message Processing and Dispatching for the SNMP (read-only access)
- RFC 2576 Coexistence between SNMP Version 1, Version 2, and Version 3
- RFC 2578 SNMP Structure of Management Information MIB
- RFC 2579 SNMP Textual Conventions for SMIPv2
- RFC 2580 Conformance Statements for SMIPv2
- RFC 2665 Ethernet-like interface MIB
- RFC 2787 VRRP MIB
- RFC 2790 Host Resources MIB
- RFC 2819 RMON MIB
- RFC 2863 Interface Group MIB
- RFC 3410 Introduction and Applicability Statements for Internet Standard Management Framework
- RFC 3411 An architecture for describing SNMP Management Frameworks
- RFC 3412 Message Processing and Dispatching for the SNMP
- RFC 3413 Simple Network Management Protocol (SNMP)—(all MIBs are supported except the Proxy MIB)
- RFC 3414 User-based Security Model (USM) for version 3 of SNMPv3
- RFC 3415 View-based Access Control Model (VACM) for the SNMP
- RFC 3416 Version 2 of the Protocol Operations for the SNMP
- RFC 3417 Transport Mappings for the SNMP
- RFC 3418 Management Information Base (MIB) for the SNMP
- RFC 4188 Definitions of Managed Objects for Bridges
- RFC 4318 Definitions of Managed Objects for Bridges with Rapid Spanning Tree Protocol
- RFC 4363b Q-Bridge VLAN MIB

Juniper Networks Services and Support

Juniper Networks is the leader in performance-enabling services that are designed to accelerate, extend, and optimize your high-performance network. Our services allow you to maximize operational efficiency while reducing costs and minimizing risk, achieving a faster time to value for your network. Juniper Networks ensures operational excellence by optimizing the network to maintain required levels of performance, reliability, and availability. For more details, please visit www.juniper.net/us/en/products-services.

**Optional Modules**

<table>
<thead>
<tr>
<th>Module Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NFX-EM-6T2SFP</td>
<td>6-port 100BASE-T/1000BASE-T + 2-port 100BASE-X SFP module</td>
</tr>
<tr>
<td>NFX-LTE-AE</td>
<td>LTE modem support for 1, 5, 7-8, 12-13, 25-26, 29-30, 41 bands (NA and EU)</td>
</tr>
<tr>
<td>NFX-LTE-AA</td>
<td>LTE modem support for 1, 3, 5, 7-8, 19-21, 28, 38-41 bands (APAC, AU and NZ)</td>
</tr>
</tbody>
</table>

Note 3: Optional modules are applicable to NFX150-S1 and NFX150-S1E products only. The NFX-LTE-AE and NFX-LTE-AA occupies two expansion slots. The NFX-EM-6T2SFP occupies one expansion slot and cannot be combined with the LTE Modules.

**About Juniper Networks**

Juniper Networks brings simplicity to networking with products, solutions and services that connect the world. Through engineering innovation, we remove the constraints and complexities of networking in the cloud era to solve the toughest challenges our customers and partners face daily. At Juniper Networks, we believe that the network is a resource for sharing knowledge and human advancement that changes the world. We are committed to imagining groundbreaking ways to deliver automated, scalable and secure networks to move at the speed of business.
