Why Juniper Networks for State and Local Government?

When it comes to your network, the status quo won't do.

Digital government services help cities and states better serve their constituents while improving efficiency. Innovative public-private partnerships enable the delivery of high-speed broadband that fosters economic growth and ensures digital inclusivity for all students, as well as for small- and home-office workers.

Unfortunately, these lofty goals are often frustrated by legacy networks that don't offer the same capacity for innovation and improvement. State and local governments need networks that allow them to deliver better services to both constituents and staff while allowing them to effectively partner with the business and education community.

That requires a networking partner with a vision. A partner that isn't afraid to challenge conventional wisdom. A partner that anticipates your constituents' needs, has the expertise to solve your toughest problems, and helps you achieve your most ambitious objectives.

Juniper Networks is such a partner. Since its inception, Juniper has consistently developed and delivered market-leading solutions and services, including routers, switches, security, and software, that set the standard for how governments and businesses connect and collaborate. Juniper is the vendor of choice for the world's leading service providers, stock exchanges, telecoms, enterprises, and government agencies. Over the years, Juniper has earned its reputation as an innovator by out-engineering the competition and exceeding customer expectations.

Whether you're extending the reach of high-speed broadband to business development zones or underserved areas, modernizing agencies' campus networks and field operations, creating sensor networks to safeguard the public, or protecting networks against the latest security threats, look no further than Juniper Networks.

Top Five Priorities of State CIOs

1. Security and risk management
2. Cloud services
3. Consolidation and optimization
4. Business intelligence and data analytics
5 Legacy modernization
