# Confidentiality and Legal Notices

- This material contains information that is confidential and proprietary to IBM and Juniper Networks, Inc. Recipient may not distribute, copy, or repeat information in the document.
- This statement of product direction sets forth Juniper Networks' current intention and is subject to change at any time without notice. No purchases are contingent upon Juniper Networks delivering any feature or functionality depicted in this presentation.

# What is driving the Enterprise IT?

## OPERATING EXPENSES *# servers managed per admin*

**GOOGLE: 1 per 10,000 servers**  
Each admin can operate ~10,000 servers

**Ent/SP: Less than 100**  
Each admin can manage up to ~100 servers = large headcount

## TIME TO SERVICE DEPLOYMENT *Code to production launch*

**AMAZON: Few seconds**  
STAT MUX Service on Existing Infrastructure

**Ent/SP: 10-12 Months**  
Mobile Operators quote many months per service; mostly manually

## OPERATIONAL COMPLEXITY *# of SKUs to manage*

**GOOGLE: 10s Configs**  
Google: ~10 shared hardware system bundles

**Ent/SP: Thousands configs**  
1000's of SKUs to manage makes IT overly complex

**Innovation and digital transformation**

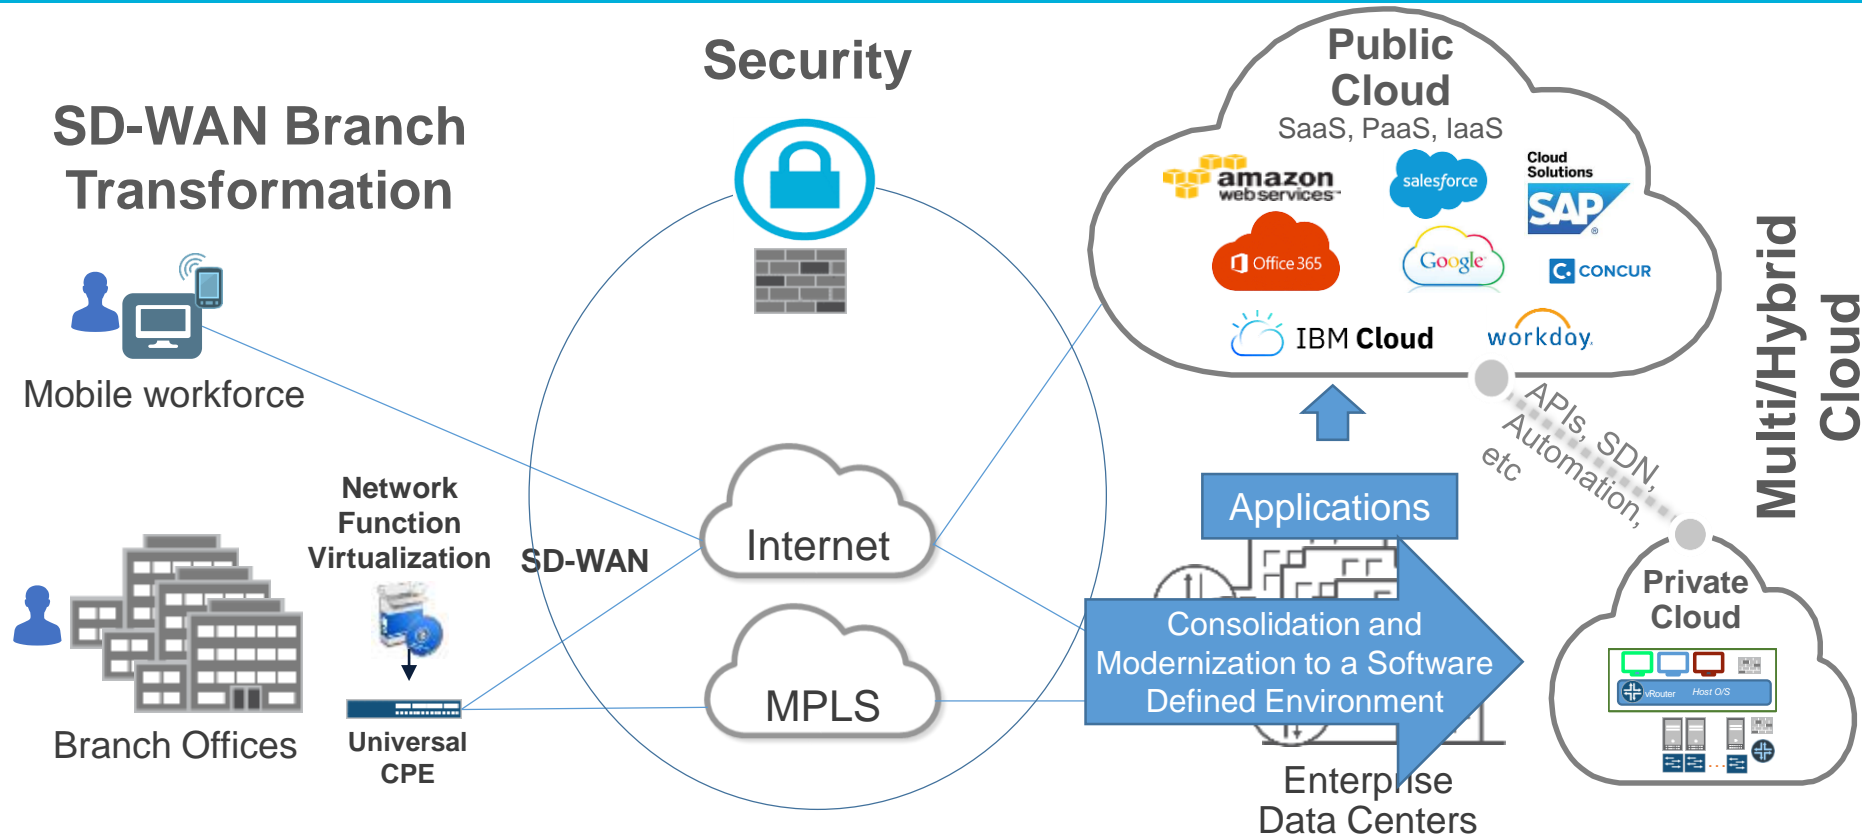

**Accelerate Time to Market**

**Flexible business models**  
**Capex to Opex**  
**Subscription models**

# The Enterprise Cloud Transformation in motion

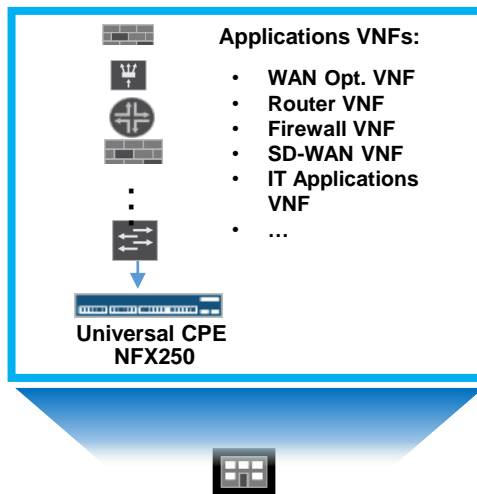

# How Juniper Cloud CPE enables the SD-WAN Branch Transformation

Old Branch

- Multiple devices/Redundant Scaling
- High operational costs/Truck rolls
- Slow time-to-market / revenue
- Declining revenues
- High Touch (Configuration)
- Hard-wired Service Chains

Modern Branch

- Single universal CPE device with customizable services offering
- Services richness based on pay as-you-go software model
- Services installed in Branch or Telco Cloud
- Automated operations/Zero Touch Provisioning

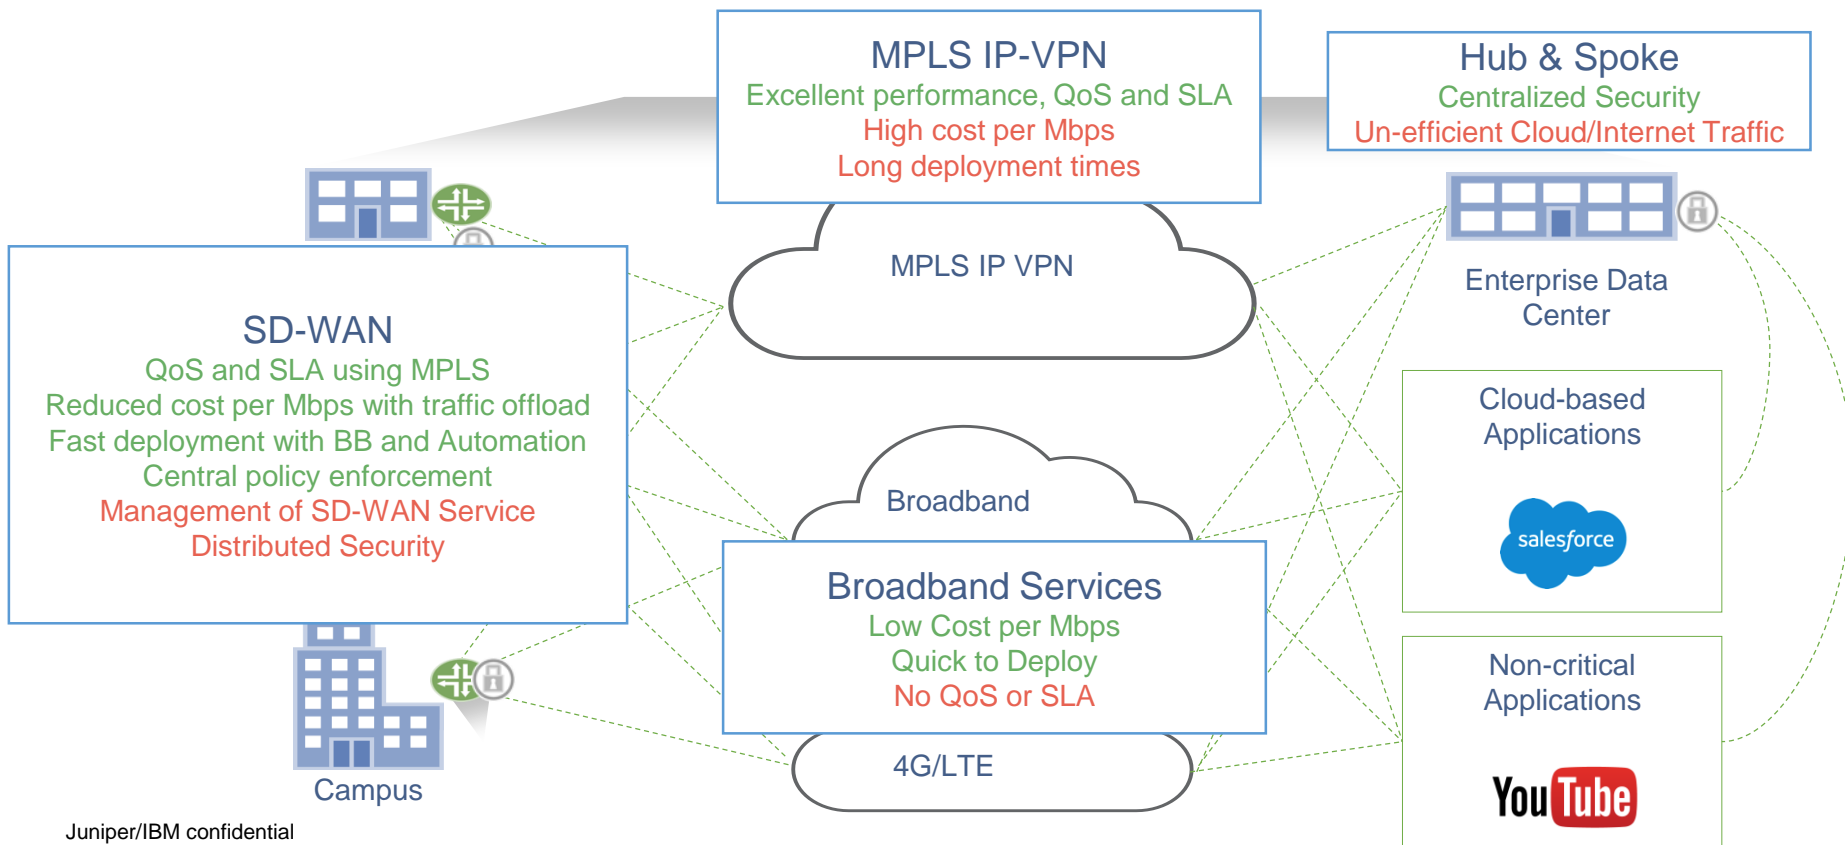

Device Consolidation

Simplified Operations with automation and plug & play deployment

IT/Software model to Networking and Security

Reduced Branches connectivity costs with Software Defined WAN

# SD-WAN Architecture

# Juniper Cloud CPE - Platform to deliver VNF Based Managed Services and SD-WAN

Service Orchestration  
**Contrail Service Orchestration**

Infrastructure Orchestration  
**Contrail Networking + OpenStack = Contrail Cloud**

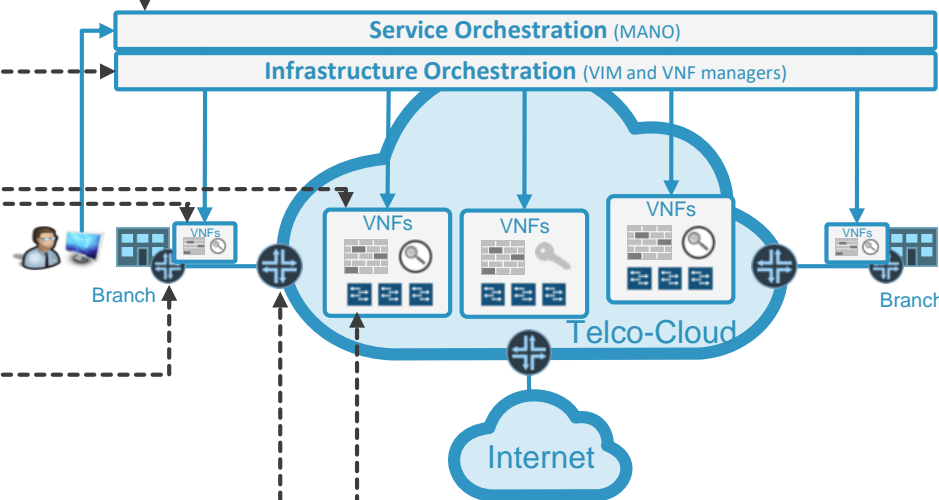

Virtual Network Functions  
**vSRX and vMX and Third Party VNFs**

**CPE Devices**  
NFX Series Network Services Platform      SRX Series SD-WAN - Security

Service Hubs and Telco infra  
**SRX Service Gateways and MX Series Routers**

# Typical enterprise requirements are focused on improving the user experience, agility, and flexibility while enabling cloud delivery

---

## **Improve user experience**

for employees, agents, partners, and clients – ensure all applications are usable wherever they are

---

## **Enable cloud adoption**

interconnect company sites and clients effectively with cloud services and public Internet while ensuring reliable, high performance, and secure connectivity end-to-end

---

## **Increase agility**

reduce network delivery as a barrier to quick business and application development and deployment while simplifying moves adds and changes throughout the environment

---

## **Improve Security**

embed security into every network service by leveraging next generation security services

---

## **Reduce risk**

improve network resiliency by diversifying carrier service and reduce errors through enhance automated provisioning

---

## **Enable global business**

simplify global operations, vendors, technologies, management for various transport and equipment providers e.g. single pane of glass for management

---

# IBM SD-WAN Values

- 1 Global SD-WAN Cloud Platform
- 2 Comprehensive Security Model
- 3 Applied Cognitive Analytics to Management and Monitoring
- 4 “Services” vs “Systems” Integration Approach
- 5 Services scale, reach and multivendor expertise

# IBM Cloud based Secure SD-WAN Platform Powered by Juniper

## IBM SD-WAN Cloud Hub

### Enterprise branch

Branch consolidation, SD-WAN, etc

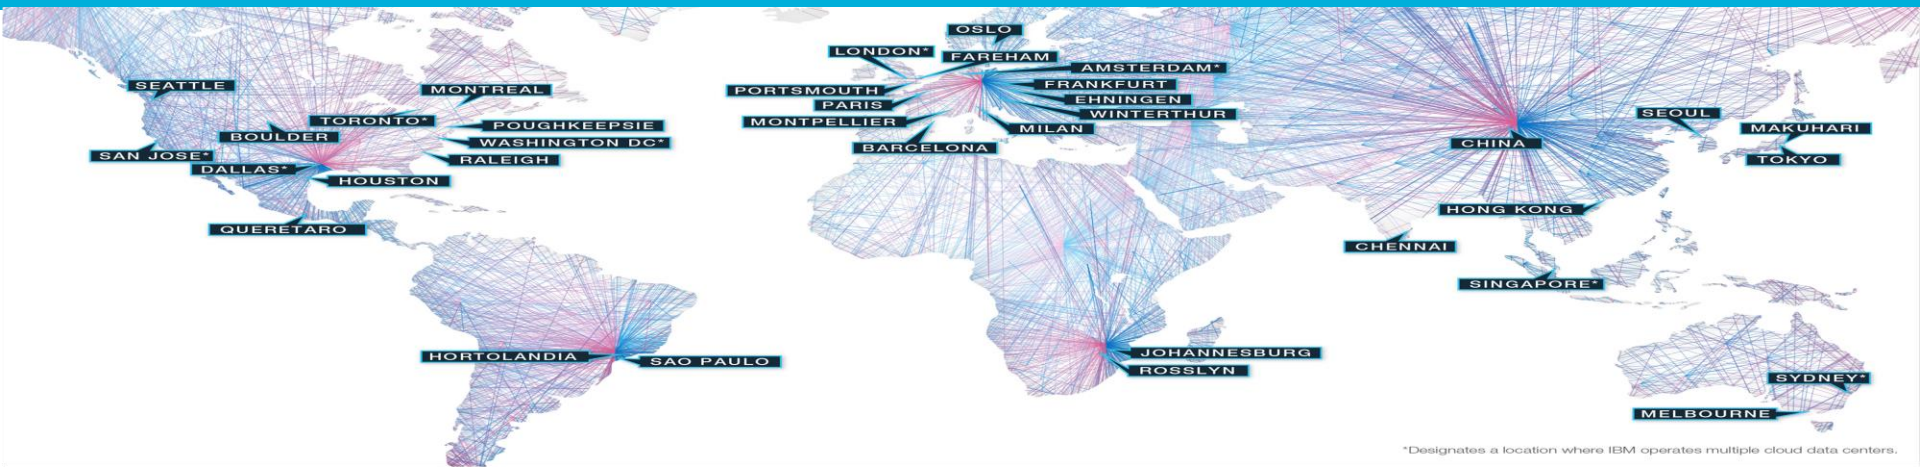

Leverages IBM Cloud footprint

- ✓ Removes the data center as hub of the network
- ✓ Enables flexible selection of carrier services
- ✓ Leverages Internet VPN to reduce cost by 20-30%
- ✓ Provides access to multiple carriers and high capacity connections to cloud service providers
- ✓ Consolidates multiple independent networks into one global network
- ✓ Provides access to all applications from any location

# Leveraging IBM Cloud Footprint

\*Designates a location where IBM operates multiple cloud data centers.

## Data Centers

**55 Total**

IBM cloud data centers

## Network Architecture

**3 Networks**

separate public, private, and internal  
management networks

## Connectivity

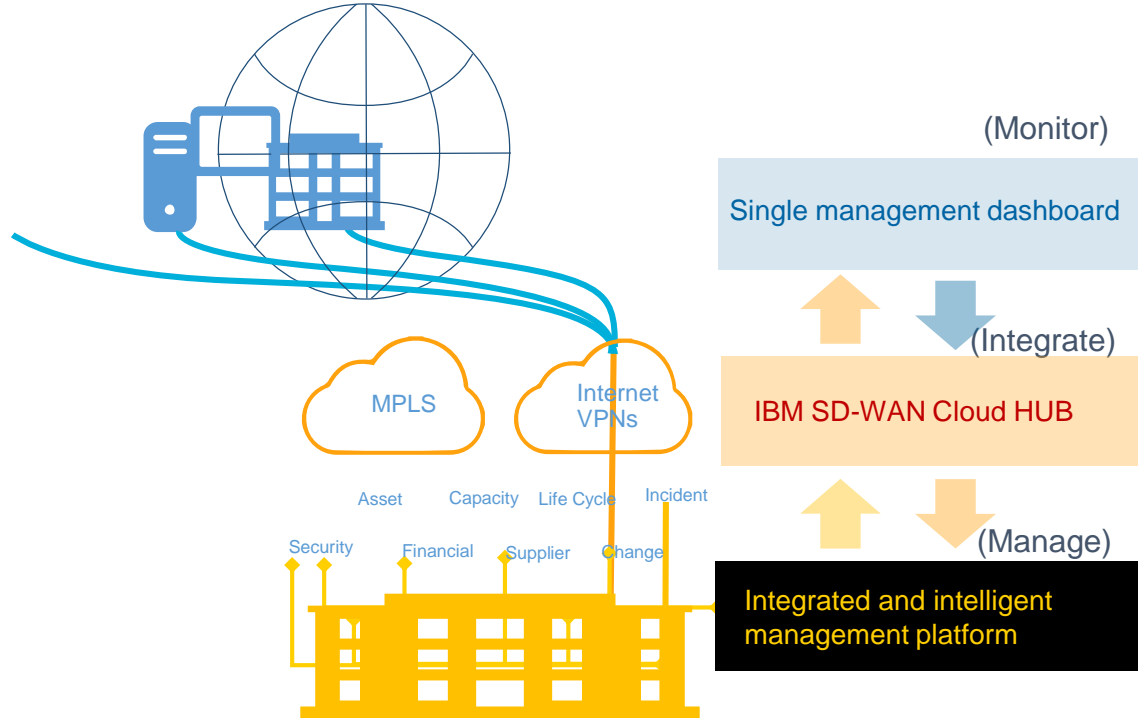

**+15 Tbps**

global backbone connectivity

# The IBM SD-WAN Service provides a management platform for operations as well as future technology innovation

- ✓ The service is a fully managed service, customers gain visibility and insight into network operations and performance through a single portal.
- ✓ Independence from providers leading to greater speed to market and flexibility for moves, adds and changes in the network at contained cost.
- ✓ Global coverage with the strongest provider for each geographical area.
- ✓ Reduced latency for Cloud Connectivity.
- ✓ Typically up to 30% more bandwidth and 25% lower MPLS costs.
- ✓ Automated load sharing, high availability and integration across multiple providers.

# IBM Secure SD-WAN- Security Hubs

## CUSTOMER Branches

## WAN TRANSPORT

### SECURITY HUB

QRADAR  
(SEIM, FLOW,  
FORENSICS)

IBM PEERING POINT

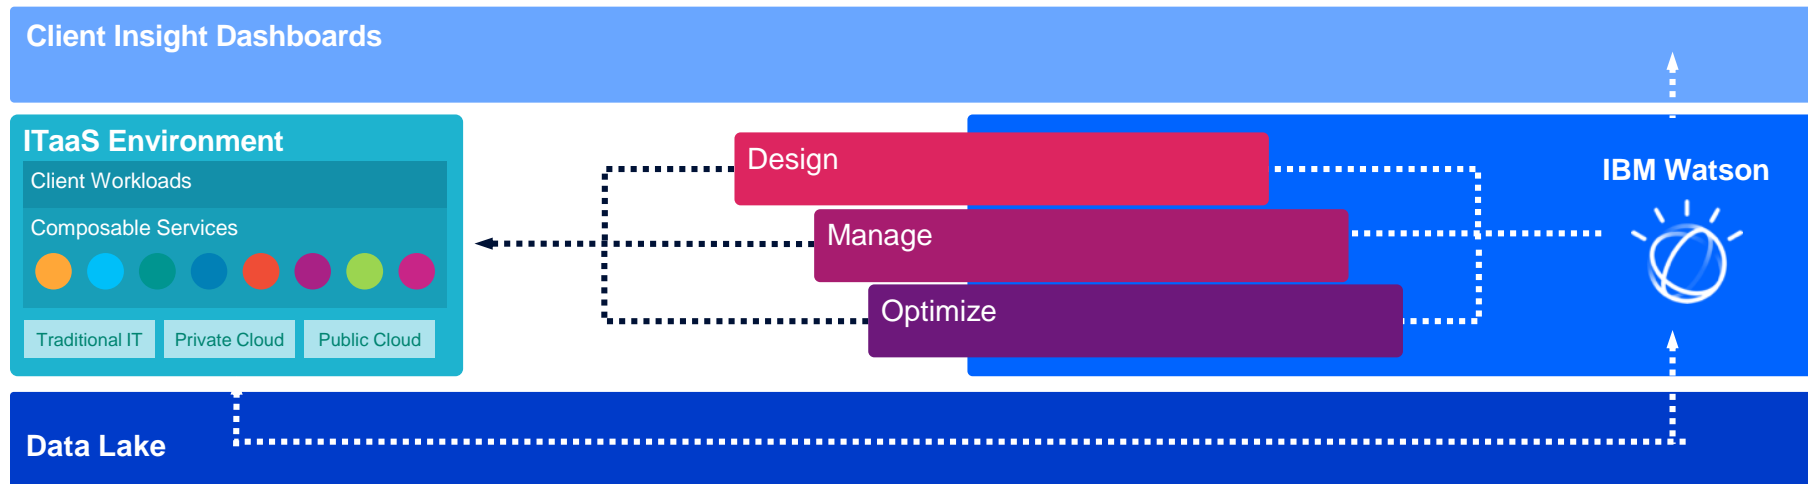

## CLOUD RESOURCES

### Available Security Features

- Next Gen firewall
- IPS
- Anti-spam
- URL Filtering
- Malware / AV detection
- Command & control traffic detection
- Geo IP blocking
- SSL VPN
- IPsec
- Dynamic routing (eBGP, iBGP, OSPF)
- QoS
- User FW with machine identification
- SSL forward proxy

# IBM Services Platform with Watson

## Build an agile ITaaS environment to meet ever-changing business needs by:

- Establishing a catalog of composable, compatible services
- Seamlessly integrating the right mix of services, at scale
- Establishing end-to-end governance

## Ensure a client's environment is always on, always secure, always improving by focusing Watson on three main objectives:

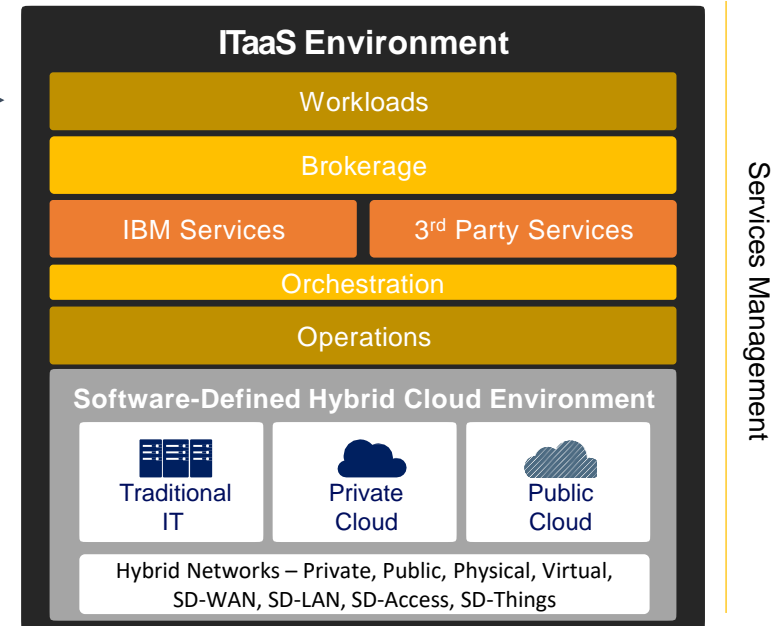

- Designing superior IT solutions
- Managing IT operations
- Optimizing IT performance

# We are reinventing the Services model ... shifting from a Systems Integrator to a Services Integrator and driving technology led services

From **systems integration**  
to achieve IT outcomes

To **services integration**  
to enable business outcomes

# IBM GTS provides a broad set of modular services to address the Enterprise infrastructure needs

## Systems Services

Build and manage highly efficient infrastructure to respond to change and drive innovation

**300+** client and IBM data centers under management

## Mobility Services

Plan your approach, manage devices and end-user applications and related network infrastructure

**5.5M+** mobile devices under management

## Resiliency Services

Maintain business continuity and recover critical business applications no matter the circumstances

**2.3+** Exabytes backed up annually

## Networking Services

Design, implement and manage integrated communications and networking environments

**270K+** network devices under management

## Technology Support

Simplify management and streamline maintenance of IBM and multi-vendor environments

**30,000+** products covered by **Multi-Vendor Services**

## Cloud Services

Reinvent your business with the power of cloud computing

**50+** cloud data centers across six continents

## Security Services

Protect your enterprise from complex IT security threats while reducing costs

**35B** events managed per day in more than 130 countries

# IBM Hardware and Software Support Services has the depth and breadth to deliver speed and quality

**Speed**

**Quality**

IBM support is designed to:

- **Prevent** downtime with proactive, first-rate service
- **Resolve** outages faster if they do occur to better protect your brand
- **Optimize** IT and user productivity—and revenue—to enhance business results
- **Protect** your brand reputation and help keep your customer base
- **Simplify** support to save time, resources and costs

**57** support centers

worldwide with regional and localized language support

**19,000**

**IT support specialists**  
worldwide who know technology

**585** parts centers

with 1.3 million IBM and non-IBM parts

Support for more than

**30,000**

multivendor products

**40%**

Reduction in problem determination time by using **IBM® Watson®**

**11** global research laboratories

**94%**

First-call hardware success rate

A combined total of

**6M**

hardware and software service requests

**114**

hardware and software development laboratories

# Key take Away

**Enterprise Cloud Transformation** is driving the **convergence** of **Network, Security** and **Cloud** with **SD-WAN**

**IBM Secure SD-WAN solution powered by Juniper** combines

- Cloud, Cognitive, Security, Services at global scale, from IBM
- Juniper technology innovation to deliver Secure SD-WAN as a Service

**IBM and Juniper are jointly enabling the Enterprise Cloud Transformation in a holistic way including Network and Security**

# IBM and Juniper Breakout Sessions @ NXTWORKS

- **Tuesday 10.30a to 11.20a - Breakout Session #1 – Security Transformation and Secure SD-WAN**  
Ritesh Agarwal and Ben Hendrick
- **Tuesday 11.30a to 12.20p - Breakout Session #2 SD-WAN and the Enterprise Cloud Transformation - Convergence of Cloud, Network and Security**  
Joao Gomes and Sandeep Dhingra
- **Tuesday 4.30p to 5.20p - Customer Use Cases and Transformation Journey with Juniper Cloud CPE/SD-WAN Solutions**  
Ripin Checker + Steve Teitzel + customer

VISIT US @ IBM BOOTH

An aerial view of a city at dusk, with a network of glowing white lines and nodes overlaid on the image, suggesting a global or digital theme. The lines connect various points across the city, with some nodes appearing as bright white spheres. The background shows a dense urban landscape with numerous buildings, some of which are illuminated with lights. The sky is a mix of purple, blue, and orange hues, indicating the time is either sunset or sunrise. The overall composition is modern and technological.

THANK YOU
