New Features in Junos Snapshot Administrator Release 1.0	2

Requesting Technical Support

To request technical support for Junos Snapshot Administrator, you can call [Juniper Global Support](#) if you have an active Juniper Care or Operate Specialist support contract. Before calling support, be prepared to provide the following information:

- Junos Support entitlement information
- MX Series router model and serial number
- Contact information

Once you contact Juniper Global support, we will route your issue to the proper support team, who will respond via e-mail or by telephone as needed. You cannot submit a support case for Junos Snapshot Administrator through the Web Case Manager tool.

NOTE: Juniper Networks only supports unmodified versions of Junos Snapshot Administrator.

Installing Junos Snapshot Administrator

Operating System

- Junos Snapshot Administrator should be installed on a system with a 32-bit or 64-bit CentOS 5.5 or later operating system. For Junos Snapshot Administrator installation and operating instructions, see the [Junos Snapshot Administrator Guide](#).

Supported Platforms

Junos Snapshot Administrator has been tested with the following:

- MX Series router running Junos OS Release 11.4

New Features in Junos Snapshot Administrator Release 1.0

You can perform the following actions using Junos Snapshot Administrator Release 1.0:

- Take a snapshot of the runtime environment on a device.
- Compare two snapshots.
- Audit a device's runtime environment against pre-defined criteria.
