## Introduction

Policy Enforcer orchestrates threat remediation workflows based on Juniper Networks Sky Advanced Threat Prevention (sky ATP) solution, Command-and Control server (C&C server), and GeolP identification feeds, in addition to other trusted custom feeds from customers. Policy Enforcer enforces security policies on Juniper Networks virtual and physical SRX Series firewalls, EX Series and QFX Series switches, MX Series routers, third-party switch and wireless networks, private cloud and SDN solutions such as Contrail and VMware NSX, as well as on public cloud deployments.

Policy Enforcer integrates with the VMware NSX solution to deliver an advanced next-generation firewall feature set that uses vSRX for VMware microsegmentation deployments. Policy Enforcer enables pervasive security across the entire network using switches, routers, and security devices for on-premise scenarios leveraging SDN solutions such as Juniper Networks Contrail and VMware NSX to orchestrate networking functionality where needed, along with applications hosted in the public cloud platforms such as Amazon Web Services (AWS).

## Release Notes for Policy Enforcer

- [Product Compatibility on page 2](#)
- [Known Issues on page 7](#)
- [Known Behavior on page 9](#)

## Product Compatibility

This section describes the supported hardware and software versions for Policy Enforcer. For Security Director requirements, please see the Security Director 18.1R1 release notes.

- [Supported Security Director Software Versions on page 2](#)
- [Supported Devices on page 3](#)
- [Third-Party Wired and Wireless Access Network on page 5](#)
- [Juniper Networks Contrail and AWS Specifications on page 5](#)
- [Virtual Machine on page 6](#)
- [Supported Browser Versions on page 6](#)
- [Upgrade Support on page 6](#)

### Supported Security Director Software Versions

Policy Enforcer is supported only on specific Security Director software versions as shown in [Table 1 on page 2](#).

**Table 1: Supported Security Director Software Versions**

Policy Enforcer Software Version	Compatible with Security Director Software Version	Junos OS Release (Sky ATP Supported Devices)
16.1R1	16.1R1	Junos 15.1X49-D60 and later

**Table 1: Supported Security Director Software Versions (continued)**

Policy Enforcer Software Version	Compatible with Security Director Software Version	Junos OS Release (Sky ATP Supported Devices)
16.2R1	16.1R1, 16.2R2	Junos 15.1X49-D80 and later
17.1R1	17.1R1	Junos 15.1X49-D80 and later
17.1R2	17.1R2	Junos 15.1X49-D80 and later
17.2R1	17.2R1	Junos 15.1X49-D110 and later
17.2R2	17.2R2	Junos 15.1X49-D110 or Junos 17.3R1 and later
18.1R1	18.1R1	Junos 15.1X49-D110 or Junos 17.3R1 and later

### Supported Devices

Table 2 on page 3 lists the SRX Series devices that support Sky ATP and the threat feeds these devices support.

**NOTE:** Table 2 on page 3 lists the general Junos OS release support for each platform. However, each Policy Enforcer software version has specific requirements that take precedence. See Table 1 on page 2 for more information.

**Table 2: Supported SRX Series Devices and Feed Types**

Platform	Model	Junos OS Release	Supported Threat Feeds
vSRX	2 vCPUs, 4 GB RAM	Junos 15.1X49-D60 and later	C&C, antimalware, infected hosts, GeolIP
SRX Series	SRX300, SRX320	Junos 15.1X49-D90 and later	C&C, GeolIP
SRX Series	SRX340, SRX345, SRX550m	Junos 15.1X49-D60 and later	C&C, antimalware, infected hosts, GeolIP
SRX Series	SRX1500	Junos 15.1X49-D60 and later	C&C, antimalware, infected hosts, GeolIP
SRX Series	SRX5400, SRX5600, SRX5800	Junos 15.1X49-D62 and later	C&C, antimalware, infected hosts, GeolIP
SRX Series	SRX4100, SRX4200	Junos 15.1X49-D65 and later	C&C, antimalware, infected hosts, GeolIP

**Table 2: Supported SRX Series Devices and Feed Types (continued)**

Platform	Model	Junos OS Release	Supported Threat Feeds
SRX Series	SRX4600	Junos 18.1R1 and later	C&C, antimalware, infected hosts, GeolP
SRX Series	SRX3400, SRX3600	Junos 12.1X46-D25 and later	C&C, GeolP
SRX Series	SRX1400	Junos 12.1X46-D25 and later	C&C, GeolP
SRX Series	SRX550	Junos 12.1X46-D25 and later	C&C, GeolP
SRX Series	SRX650	Junos 12.1X46-D25 and later	C&C, GeolP

**NOTE:** The SMTP e-mail attachment scan feature is supported only on the SRX1500, SRX4100, SRX4200, SRX5400, SRX5600, and SRX5800 devices running Junos OS Release 15.1X49-D80 and later. vSRX does not support the SMTP e-mail attachment scan feature.

In Policy Enforcer Release 18.1R1, Policy Enforcer supports SRX Series devices running Junos OS Release 17.3R1 and later.

Table 3 on page 4 lists the supported EX Series and QFX Series switches.

**Table 3: Supported EX Series Ethernet Switches and QFX Series Switches**

Platform	Model	Junos OS Release	Supported Policy Enforcer Modes
EX Series	EX4200, EX2200, EX3200, EX3300, EX4300	Junos 15.1R6 and later	Sky ATP
EX Series	EX9200	Junos 15.1R6 and later	Sky ATP
EX Series	EX3400, EX2300	Junos 15.1R6 and later Junos 15.1X53-D57 and later	Sky ATP
QFX Series	QFX5100, QFX5200	Junos 15.1R6 and later	Sky ATP
	vQFX	Junos 15.1X53-D60.4	

Table 4 on page 5 lists the supported MX Series routers that support the DDoS feed type.

**Table 4: Supported MX Routers and Feed Types**

Platform	Model	Junos OS Release	Supported Threat Feeds
MX Series	MX240, MX480, MX960	Junos 14.2R1 and later	DDoS
	vMX	Junos 16.2R2.8	

[Table 5 on page 5](#) shows the supported SDN and cloud platforms.

**Table 5: Supported SDN and Cloud Platforms**

Component	Specification
VMware NSX for vSphere	6.3.1 and later  <b>NOTE:</b> For sites that are running vSphere 6.5, vSphere 6.5a is the minimum supported version with NSX for vSphere 6.3.0.
VMware NSX Manager	6.3.1 and later

### Third-Party Wired and Wireless Access Network

The following table lists the third-party support and required server.

Switch/Server	Notes
Third-party switch	Any switch model that adheres to RADIUS IETF attributes and support RADIUS Change of Authorization from ClearPass is supported by Policy Enforcer for threat remediation.
ClearPass RADIUS server	Must be running software version 6.6.0.
Cisco ISE	Must be running software version 2.1 or 2.2.
Forescout CounterACT	Must be running software version 7.0.0.  <b>NOTE:</b> To obtain an evaluation copy of CounterACT for use with Policy Enforcer, click <a href="#">here</a> .

If you use Juniper Networks EX4300 Ethernet switch to integrate with the third-party switches, the EX4300 must be running Junos OS Release 15.1R6 or later.

### Juniper Networks Contrail and AWS Specifications

[Table 6 on page 5](#) shows the required components for Juniper Networks Contrail.

**Table 6: Juniper Networks Contrail Components**

Model	Software Version	Supported Policy Enforcer Mode
Juniper Networks Contrail	5.0	Microsegmentation and threat remediation with vSRX
vSRX	Junos OS 15.1X49-D120 and later	Microsegmentation and threat remediation with vSRX

Table 7 on page 6 shows the required Policy Enforcer components for AWS.

**Table 7: AWS Support Components**

Model	Software Version	Supported Policy Enforcer Mode
vSRX	Junos OS 15.1X49-D100.6 and later	vSRX policy based on workload discovery

### Virtual Machine

Policy Enforcer is delivered as an OVA or a KVM package to be deployed inside your VMware ESX or QEMU/KVM network with the following configuration:

- 1 CPU
- 8-GB RAM
- 120-GB disk space

**Table 8: Supported Virtual Machine Versions**

Virtual Machine	Version
VMware	VMware ESX server version 4.0 or later or a VMware ESXi server version 4.0 or later
QEMU/KVM	CentOS Release 6.8 or later

### Supported Browser Versions

Security Director and Policy Enforcer are best viewed on the following browsers.

**Table 9: Supported Browser Versions**

Browser	Version
Google Chrome	54.x
Internet Explorer	11 on Windows 7
Firefox	46 and later

### Upgrade Support

Upgrading Policy Enforcer follows the same rules as for upgrading Security Director. You can upgrade only from the previously released version. This includes the minor releases. For example, Policy Enforcer 18.1R1 can be upgraded only from 17.2R2. However, Policy Enforcer 18.1R1 can be upgraded from 17.2R1 -> 18.1R1, 17.2R2 -> 18.1R1, or 17.2R1-> 17.2R2 -> 18.1R1.

**NOTE:** Ensure that the internet connectivity is available for Policy Enforcer. Without the internet connectivity, you cannot upgrade Policy Enforcer successfully.

For more information about the Security Director upgrade path, see [Upgrading Security Director](#).

## Known Issues

This section lists the known issues in Policy Enforcer Release 18.1R1.

For the most complete and latest information about known Policy Enforcer defects, use the Juniper Networks online [Junos Problem Report Search](#) application.

- On the Edit Connector page, if you want to view the Detailed View page for the second time for the same connector instance, click a different row and then click on the connector instance. Clicking the Detailed View page consecutively does not show any data.
- You cannot edit the generated metadata names, although the tag values are editable.
- Enrolling devices to Sky ATP through Policy Enforcer takes an average of four minutes to complete. Devices are enrolled serially, not in parallel. [PR 1222713]
- The first time you open the Monitoring pages, you receive the **error occurred while requesting the data** message. This also happens the first time you open the Top Compromised Host dashboard widget. As a workaround, click your browser's refresh icon to refresh the page and display the information. [PR 1239956]
- The Top Compromised Hosts widget on the dashboard does not list all the realms. As a workaround, drag and drop another top compromised host widget to the dashboard to display all realms. [PR 1262410]
- An infected host can be blocked by using a custom feed; however, there is no UI to indicate that the host is blocked. To unblock the infected host, remove its IP address from the custom feed. [PR 1292394]
- You can configure only one RADIUS server as a controller for a connector. [PR 1287908]
- When an SRX Series device is used as a Layer 3 gateway for a given host or subnet and a switch is part of the secure fabric, the block and unblock actions might fail when the Policy Enforcement Group (PEG) is created with the location group type. As a workaround, create the PEG with the IP/Subnet group type and associate that PEG to the threat prevention policy. [PR 1296535]
- Even when a device is unavailable (for example, when the device is down), the removal of the device or site from the realm might result in its disenrollment from the realm.
- You cannot delete the configuration for an SRX Series device when the threat prevention policy is associated with multiple PEGs. [PR 1309383]
- Resolving an infected host fails when there is no endpoint session available in the RADIUS server. [PR 1311081]

- The following minor UI issues are observed:
  - For connectors with IP subnets, sometimes the subnets cannot be moved to the list of available subnets.
  - When you modify a threat prevention policy, the GeoIP state changes from **updated** to **assign to groups**. The state should be maintained.
  - Deleting a realm displays an OK message with a red notification window. [PR 1310813]
- On the Create Secure Fabric and Edit Secure Fabric pages, when you search on selected devices and click OK, all devices that are added are deleted, except for the searched devices. Searching might disenroll some of the devices. Always clear the search selection and then click OK. [PR 1342960]
- The port information turns blank when the same host is re-infected and tracked by the Cisco ISE connector. [PR 1346167]
- The old sessions in ClearPass cannot be terminated and, therefore, the actual east-west traffic block cannot be active till those old sessions are reauthenticated.  
Workaround: Regularly clear the old sessions in ClearPass. [PR 1317503]
- Policy Enforcer automatically discovers the vSRX devices for AWS,; however, the vSRX device is not shown in the available list in the secure fabric. On the Secure Fabric page, mouse over the site to see the corresponding device details. [PR 1342028]
- On the Create Connector page for AWS, it takes about 50 seconds to fetch 10 VPC records from AWS and during this time, if you change the region, it takes additional 50 seconds or more to fetch all the details. [PR 1346533]
- When a policy action is taken on devices on the AWS public cloud, the security groups applied to the end host are not updated on the Security Director > Threat Prevention > Monitoring page. [PR 1347164]
- You cannot delete the next-generation firewall policies when metadata provided only by Policy Enforcer is used as a source or destination address in the firewall policy rule. [PR 1344388]
- If you use an incorrect vSRX tag when creating AWS connector, the connector considers this as another EC2 instance and retains this entry in the connector or endpoint table. [PR 1348406]
- In Cloud only feed mode and Default mode, deleting a site would leave devices pointing to wrong feed source Id. Because of this when the mode is changed to higher modes, SDSN feed downloads may not work correctly.  
Workaround: If you are planning to change the SDSN threat type mode, delete devices that are in site first and then delete the site. [PR 1348376]
- In Threat Prevention Policy page, triggering a Rule analysis may throw an error message stating that an error has occurred while triggering the rule analysis. You must retry the rule analysis.

Workaround:

- Click **Update Required** or **View Analysis** after some time. These options successfully trigger the rule analysis.
- If the problem still persists, in Configure >Firewall Policy >Policies, select a device and click **Publish & Update**. Once this is successful, click **Update Required** or **View Analysis** for the threat prevention policy. [PR 1331439].
- While creating a connector for Juniper Networks Contrail, you must provide infected host security group name in the Quarantine Security Group field. [PR 1349253]
- During the device enrollment to SkyATP, security devices might show the enrollment status as Failed along with Retry option.

Workaround: Check the enrollment status of that particular device after 15 minutes by refreshing the page. If it still shows failed, use the retry option to enroll it. [PR 1350264]

## Known Behavior

When you are creating a connector for third-party devices, it is mandatory to add at least one IP subnet to a connector. You cannot complete the configuration without adding a subnet.

## Finding More Information

---

For the latest, most complete information about known and resolved issues with Junos Space Network Management Platform and Junos Space Management Applications, see the Juniper Networks Problem Report Search application at: <http://prsearch.juniper.net>.

Juniper Networks Feature Explorer is a Web-based application that helps you to explore and compare Junos Space Network Management Platform and Junos Space Management Applications feature information to find the correct software release and hardware platform for your network. Find Feature Explorer at: <http://pathfinder.juniper.net/feature-explorer/>.

Juniper Networks Content Explorer is a Web-based application that helps you explore Juniper Networks technical documentation by product, task, and software release, and download documentation in PDF format. Find Content Explorer at: <http://www.juniper.net/techpubs/content-applications/content-explorer/>.

## Documentation Feedback

---

We encourage you to provide feedback, comments, and suggestions so that we can improve the documentation. You can provide feedback by using either of the following methods:

- Online feedback system—Click TechLibrary Feedback, on the lower right of any page on the [Juniper Networks TechLibrary](#) site, and do one of the following:

- Click the thumbs-up icon if the information on the page was helpful to you.
- Click the thumbs-down icon if the information on the page was not helpful to you or if you have suggestions for improvement, and use the pop-up form to provide feedback.
- E-mail—Send your comments to [techpubs-comments@juniper.net](mailto:techpubs-comments@juniper.net). Include the document or topic name, URL or page number, and software version (if applicable).

## Requesting Technical Support

---

Technical product support is available through the Juniper Networks Technical Assistance Center (JTAC). If you are a customer with an active J-Care or Partner Support Service support contract, or are covered under warranty, and need post-sales technical support, you can access our tools and resources online or open a case with JTAC.

- JTAC policies—For a complete understanding of our JTAC procedures and policies, review the *JTAC User Guide* located at <https://www.juniper.net/us/en/local/pdf/resource-guides/7100059-en.pdf>.
- Product warranties—For product warranty information, visit <http://www.juniper.net/support/warranty/>.
- JTAC hours of operation—The JTAC centers have resources available 24 hours a day, 7 days a week, 365 days a year.

## Self-Help Online Tools and Resources

For quick and easy problem resolution, Juniper Networks has designed an online self-service portal called the Customer Support Center (CSC) that provides you with the following features:

- Find CSC offerings: <https://www.juniper.net/customers/support/>
- Search for known bugs: <https://prsearch.juniper.net/>
- Find product documentation: <https://www.juniper.net/documentation/>
- Find solutions and answer questions using our Knowledge Base: <https://kb.juniper.net/>
- Download the latest versions of software and review release notes: <https://www.juniper.net/customers/csc/software/>
- Search technical bulletins for relevant hardware and software notifications: <https://kb.juniper.net/InfoCenter/>

- Join and participate in the Juniper Networks Community Forum:  
<https://www.juniper.net/company/communities/>
- Open a case online in the CSC Case Management tool: <https://www.juniper.net/cm/>

To verify service entitlement by product serial number, use our Serial Number Entitlement (SNE) Tool: <https://entitlementsearch.juniper.net/entitlementsearch/>

## Opening a Case with JTAC

You can open a case with JTAC on the Web or by telephone.

- Use the Case Management tool in the CSC at <https://www.juniper.net/cm/>.
- Call 1-888-314-JTAC (1-888-314-5822 toll-free in the USA, Canada, and Mexico).

For international or direct-dial options in countries without toll-free numbers, see <https://www.juniper.net/support/requesting-support.html>.
