#### YEAR 2000 NOTICE

Juniper Networks hardware and software products are Year 2000 compliant. Junos OS has no known time-related limitations through the year 2038. However, the NTP application is known to have some difficulty in the year 2036.

#### END USER LICENSE AGREEMENT

The Juniper Networks product that is the subject of this technical documentation consists of (or is intended for use with) Juniper Networks software. Use of such software is subject to the terms and conditions of the End User License Agreement ("EULA") posted at <http://www.juniper.net/support/eula.html>. By downloading, installing or using such software, you agree to the terms and conditions of that EULA.

# Table of Contents

	About the Documentation . . . . .	xix
	Documentation and Release Notes . . . . .	xix
	Supported Platforms . . . . .	xix
	Using the Examples in This Manual . . . . .	xx
	Merging a Full Example . . . . .	xx
	Merging a Snippet . . . . .	xxi
	Documentation Conventions . . . . .	xxi
	Documentation Feedback . . . . .	xxiii
	Requesting Technical Support . . . . .	xxiv
	Self-Help Online Tools and Resources . . . . .	xxiv
	Opening a Case with JTAC . . . . .	xxiv
<b>Part 1</b>	<b>UTM Overview Feature Guide for Security Devices</b>	
<b>Chapter 1</b>	<b>Overview . . . . .</b>	<b>3</b>
	UTM Basics . . . . .	3
	Unified Threat Management Overview . . . . .	3
	Understanding UTM Custom Objects . . . . .	5
	UTM Licensing . . . . .	5
	Understanding UTM Licensing . . . . .	5
	WELF Logging . . . . .	6
	Understanding WELF Logging for UTM Features . . . . .	7
	Chassis Cluster . . . . .	7
	Understanding UTM Support for Active/Active Chassis Cluster . . . . .	8
	Understanding Chassis Cluster support for UTM Modules . . . . .	10
<b>Chapter 2</b>	<b>Configuration . . . . .</b>	<b>13</b>
	UTM Licensing . . . . .	13
	Updating UTM Licenses (CLI Procedure) . . . . .	13
	WELF Logging . . . . .	13
	Example: Configuring WELF Logging for UTM Features . . . . .	14
	Configuration Statements . . . . .	16
	Security Configuration Statement Hierarchy . . . . .	16
	[edit security utm] Hierarchy Level . . . . .	18
	application-proxy (Security UTM) . . . . .	26
	log (Security) . . . . .	27
	format (Security Log Stream) . . . . .	29
	category (Security Logging) . . . . .	30
	content-filtering (Security UTM Policy) . . . . .	31
	limit (UTM Policy) . . . . .	31
	ipc . . . . .	32

	sessions-per-client . . . . .	33
	smtp-profile (Security UTM Policy Antispam) . . . . .	33
	traffic-options . . . . .	34
	traceoptions (Security Application Proxy) . . . . .	35
	traceoptions (Security UTM) . . . . .	36
	utm-policy (Application Services) . . . . .	37
<b>Chapter 3</b>	<b>Administration . . . . .</b>	<b>39</b>
	Operational Commands . . . . .	39
	clear security utm session . . . . .	40
	request system license update . . . . .	41
	show configuration smtp . . . . .	42
	show security utm status . . . . .	43
	show security log . . . . .	44
<b>Part 2</b>	<b>UTM Antispam Filtering Feature Guide for Security Devices</b>	
<b>Chapter 4</b>	<b>Overview . . . . .</b>	<b>49</b>
	Antispam Filtering . . . . .	49
	Antispam Filtering Overview . . . . .	49
	Server-Based Antispam Filtering . . . . .	49
	Understanding Server-Based Antispam Filtering . . . . .	50
	Local List Antispam Filtering . . . . .	51
	Understanding Local List Antispam Filtering . . . . .	51
<b>Chapter 5</b>	<b>Configuration . . . . .</b>	<b>53</b>
	Server-Based Antispam Filtering . . . . .	53
	Server-Based Antispam Filtering Configuration Overview . . . . .	53
	Example: Configuring Server-Based Antispam Filtering . . . . .	54
	Local List Antispam Filtering . . . . .	60
	Local List Antispam Filtering Configuration Overview . . . . .	60
	Example: Configuring Local List Antispam Filtering . . . . .	60
	Configuration Statements . . . . .	67
	Security Configuration Statement Hierarchy . . . . .	68
	[edit security policies] Hierarchy Level . . . . .	69
	[edit security utm] Hierarchy Level . . . . .	73
	address-whitelist . . . . .	81
	address-blacklist . . . . .	81
	anti-spam (Security UTM Policy) . . . . .	82
	anti-spam (Security Feature Profile) . . . . .	83
	custom-tag-string . . . . .	83
	custom-objects . . . . .	84
	flag (SMTP) . . . . .	85
	feature-profile . . . . .	86
	from-zone (Security Policies) . . . . .	93
	no-sbl-default-server . . . . .	95
	policies . . . . .	96
	primary-server . . . . .	100
	profile (Security Antispam SBL) . . . . .	101
	sbl . . . . .	101

	sbl-default-server .....	102
	secondary-server .....	102
	sessions-per-client .....	103
	SMTP Configuration Statement Hierarchy .....	103
	spam-action .....	104
	to-zone (Security Policies) .....	105
	traceoptions (SMTP) .....	107
	traceoptions (Security Antispam) .....	108
	url-pattern .....	109
	utm .....	110
	utm-policy .....	118
<b>Chapter 6</b>	<b>Administration .....</b>	<b>121</b>
	Spam Message Handling .....	121
	Handling Spam Messages .....	121
	Blocking Detected Spam .....	121
	Tagging Detected Spam .....	122
	Operational Commands .....	122
	show security utm anti-spam status .....	123
	show security utm anti-spam statistics .....	124
	clear security utm anti-spam statistics .....	125
	show security utm status .....	126
<b>Part 3</b>	<b>UTM Content Filtering Feature Guide for Security Devices</b>	
<b>Chapter 7</b>	<b>Overview .....</b>	<b>129</b>
	Content Filtering .....	129
	Content Filtering Overview .....	129
	Understanding Content Filtering Protocol Support .....	130
	HTTP Support .....	130
	FTP Support .....	131
	E-Mail Support .....	131
<b>Chapter 8</b>	<b>Configuration .....</b>	<b>133</b>
	Content Filtering .....	133
	Content Filtering Configuration Overview .....	133
	Specifying Content Filtering Protocols (CLI Procedure) .....	134
	Example: Configuring Content Filtering Custom Objects .....	134
	Example: Configuring Content Filtering Feature Profiles .....	137
	Example: Configuring Content Filtering UTM Policies .....	140
	Example: Attaching Content Filtering UTM Policies to Security Policies .....	142
	Configuration Statements .....	144
	Security Configuration Statement Hierarchy .....	145
	[edit security policies] Hierarchy Level .....	146
	[edit security utm] Hierarchy Level .....	150
	custom-objects .....	159
	custom-message (Security Content Filtering) .....	160
	content-filtering (Security Feature Profile) .....	161
	download-profile (Security Content Filtering FTP) .....	162
	exception (Security Content Filtering) .....	162

	feature-profile . . . . .	163
	filename-extension . . . . .	169
	ftp (UTM Policy Content Filtering) . . . . .	170
	http-profile (Security Content Filtering) . . . . .	170
	imap-profile (Security UTM Policy Content Filtering) . . . . .	171
	list (Security Content Filtering Block Mime) . . . . .	171
	mime-pattern . . . . .	172
	no-notify-mail-sender (Security Content Filtering Notification Options) . . .	172
	notification-options (Security Content Filtering) . . . . .	173
	notify-mail-sender (Security Content Filtering Notification Options) . . . . .	173
	over-limit . . . . .	174
	packet-filter . . . . .	175
	permit-command . . . . .	176
	pop3-profile (Security UTM Policy Content Filtering) . . . . .	176
	profile (Security Content Filtering) . . . . .	177
	protocol-command . . . . .	178
	sessions-per-client . . . . .	179
	smtp-profile (Security UTM Policy Content Filtering) . . . . .	179
	traceoptions (Security Content Filtering) . . . . .	180
	type (Security Content Filtering Notification Options) . . . . .	180
	upload-profile (Security Content Filtering FTP) . . . . .	181
<b>Chapter 9</b>	<b>Administration . . . . .</b>	<b>183</b>
	Monitoring Content Filtering . . . . .	183
	Monitoring Content Filtering Configurations . . . . .	183
	Operational Commands . . . . .	184
	clear security utm content-filtering statistics . . . . .	185
	show security utm content-filtering statistics . . . . .	186
	show security policies . . . . .	187
<b>Part 4</b>	<b>UTM Express Antivirus Protection Feature Guide for Security Devices</b>	
<b>Chapter 10</b>	<b>Overview . . . . .</b>	<b>197</b>
	Express Antivirus Protection . . . . .	197
	Express Antivirus Protection Overview . . . . .	197
	Express Antivirus Packet-Based Scanning Versus File-Based Scanning . . . . .	197
	Express Antivirus Expanded MIME Decoding Support . . . . .	198
	Express Antivirus Scan Result Handling . . . . .	198
	Express Antivirus Intelligent Prescreening . . . . .	198
	Express Antivirus Limitations . . . . .	198
	Understanding Express Antivirus Scanner Pattern Updates . . . . .	199
<b>Chapter 11</b>	<b>Configuration . . . . .</b>	<b>201</b>
	Express Antivirus Protection . . . . .	201
	Express Antivirus Configuration Overview . . . . .	201
	Example: Configuring Express Antivirus Custom Objects . . . . .	202
	Example: Configuring Express Antivirus Feature Profiles . . . . .	205
	Example: Configuring Express Antivirus UTM Policies . . . . .	210

Example: Attaching Express Antivirus UTM Policies to Security Policies . . . .	211
Express Antivirus Protection (J-Web) . . . . .	212
Configuring Express Antivirus Custom Objects (J-Web Procedure) . . . . .	212
Configuring Express Antivirus Feature Profiles (J-Web Procedure) . . . . .	214
Configuring Express Antivirus UTM Policies (J-Web Procedure) . . . . .	217
Attaching Express Antivirus UTM Policies to Security Policies (J-Web Procedure) . . . . .	217
Express Antivirus Patterns . . . . .	219
Example: Automatically Updating Express Antivirus Patterns . . . . .	219
Example: Automatically Updating Express Antivirus Patterns (J-Web) . . . .	220
Manually Updating, Reloading, and Deleting Express Antivirus Patterns (CLI Procedure) . . . . .	220
Configuration Statements . . . . .	221
Security Configuration Statement Hierarchy . . . . .	223
[edit security utm] Hierarchy Level . . . . .	224
[edit security policies] Hierarchy Level . . . . .	231
admin-email . . . . .	236
administrator-email (Security Fallback Block) . . . . .	236
allow-email (Security Fallback Block) . . . . .	237
anti-virus (Security Feature Profile) . . . . .	238
anti-virus (Security UTM Policy) . . . . .	242
application (Security Policies) . . . . .	243
content-size . . . . .	244
content-size-limit . . . . .	245
custom-objects . . . . .	246
custom-message (Security Email Notify) . . . . .	247
custom-message (Security Fallback Block) . . . . .	247
custom-message (Security Fallback Non-Block) . . . . .	248
custom-message (Security Virus Detection) . . . . .	249
custom-message-subject (Security Email Notify) . . . . .	249
custom-message-subject (Security Fallback Block) . . . . .	250
custom-message-subject (Security Fallback Non-Block) . . . . .	251
custom-message-subject (Security Virus Detection) . . . . .	252
custom-url-category . . . . .	253
default (Security Antivirus) . . . . .	254
display-host (Security Fallback Block) . . . . .	255
email-notify . . . . .	256
engine-not-ready . . . . .	257
fallback-block (Security Antivirus) . . . . .	258
fallback-non-block (Security Antivirus) . . . . .	259
fallback-options (Security Antivirus Juniper Express Engine) . . . . .	260
feature-profile . . . . .	261
filename-extension . . . . .	267

<b>Part 5</b>	<b>UTM Full Antivirus Protection Feature Guide for Security Devices</b>	
<b>Chapter 13</b>	<b>Overview .....</b>	<b>323</b>
	Full Antivirus Protection .....	323
	Full Antivirus Protection Overview .....	323
	Scanner Pattern Database .....	324
	Understanding Full Antivirus Pattern Updates .....	324

File Scanning	325
Understanding the Full Antivirus Internal Scan Engine	326
Understanding Full Antivirus Scan Level Settings	326
Understanding Full Antivirus Scan Mode Support	327
Understanding Full Antivirus Intelligent Prescreening	328
Understanding Full Antivirus Content Size Limits	328
Understanding Full Antivirus Decompression Layer Limits	329
Understanding Full Antivirus Scanning Timeouts	330
Understanding Full Antivirus Scan Session Throttling	330
Application Protocol Scanning	330
Understanding Full Antivirus Application Protocol Scanning	331
Understanding HTTP Scanning	332
Understanding FTP Antivirus Scanning	333
Understanding SMTP Antivirus Scanning	333
Understanding SMTP Antivirus Mail Message Replacement	334
Understanding SMTP Antivirus Sender Notification	334
Understanding SMTP Antivirus Subject Tagging	335
Understanding POP3 Antivirus Scanning	335
Understanding POP3 Antivirus Mail Message Replacement	336
Understanding POP3 Antivirus Sender Notification	336
Understanding POP3 Antivirus Subject Tagging	336
Understanding IMAP Antivirus Scanning	336
Understanding IMAP Antivirus Mail Message Replacement	337
Understanding IMAP Antivirus Sender Notification	337
Understanding IMAP Antivirus Subject Tagging	338
Understanding IMAP Antivirus Scanning Limitations	338
Whitelists	338
Understanding MIME Whitelists	338
Understanding URL Whitelists	339
HTTP Trickling	340
Understanding HTTP Trickling	340
Scan Results and Fallback Options	340
Understanding Full Antivirus Scan Result Handling	340
Understanding Antivirus Scanning Fallback Options	341
Notifications	342
Understanding Protocol-Only Virus-Detected Notifications	342
Understanding E-Mail Virus-Detected Notifications	343
Understanding Custom Message Virus-Detected Notifications	343
<b>Chapter 14 Configuration</b>	<b>345</b>
Full Antivirus Protection	345
Full Antivirus Configuration Overview	345
Full Antivirus Pattern Update Configuration Overview	346
Example: Configuring Full Antivirus Custom Objects	347
Example: Configuring Full Antivirus Feature Profiles	350
Example: Configuring Full Antivirus UTM Policies	356

Example: Attaching Full Antivirus UTM Policies to Security Policies . . . . .	357
Full Antivirus Protection (J-Web) . . . . .	358
Configuring Full Antivirus Custom Objects (J-Web Procedure) . . . . .	358
Configuring Full Antivirus Feature Profiles (J-Web Procedure) . . . . .	361
Configuring Full Antivirus UTM Policies (J-Web Procedure) . . . . .	364
Attaching Full Antivirus UTM Policies to Security Policies (J-Web Procedure) . . . . .	365
Scanner Pattern Database . . . . .	366
Example: Configuring the Full Antivirus Pattern Update Server . . . . .	366
Example: Automatically Updating Full Antivirus Patterns (J-Web) . . . . .	367
Example: Automatically Updating Full Antivirus Patterns . . . . .	368
Manually Updating, Reloading, and Deleting Full Antivirus Patterns (CLI Procedure) . . . . .	369
File Scan and Fallback Options . . . . .	369
Example: Configuring Full Antivirus Scan Settings at Different Levels . . . . .	369
Example: Configuring Full Antivirus File Extension Scanning . . . . .	371
Configuring Full Antivirus File Extension Scanning (CLI Procedure) . . . . .	373
Example: Configuring Full Antivirus Intelligent Prescreening . . . . .	373
Configuring Full Antivirus Content Size Limits (CLI Procedure) . . . . .	374
Configuring Full Antivirus Decompression Layer Limits (CLI Procedure) . . . . .	375
Configuring Full Antivirus Scanning Timeouts (CLI Procedure) . . . . .	375
Configuring Full Antivirus Scan Session Throttling (CLI Procedure) . . . . .	375
Example: Configuring Antivirus Scanning Fallback Options . . . . .	376
Application Protocol Scanning . . . . .	378
Enabling HTTP Scanning (CLI Procedure) . . . . .	378
Enabling FTP Antivirus Scanning (CLI Procedure) . . . . .	379
Enabling SMTP Antivirus Scanning (CLI Procedure) . . . . .	379
Enabling POP3 Antivirus Scanning (CLI Procedure) . . . . .	379
Enabling IMAP Antivirus Scanning (CLI Procedure) . . . . .	380
Whitelists . . . . .	380
Example: Configuring MIME Whitelists to Bypass Antivirus Scanning . . . . .	380
Configuring URL Whitelists to Bypass Antivirus Scanning (CLI Procedure) . . . . .	381
HTTP Trickling . . . . .	381
Configuring HTTP Trickling to Prevent Timeouts During Antivirus Scanning (CLI Procedure) . . . . .	381
Notifications . . . . .	382
Configuring Protocol-Only Virus-Detected Notifications (CLI Procedure) . . . . .	382
Configuring E-Mail Virus-Detected Notifications (CLI Procedure) . . . . .	382
Configuring Custom Message Virus-Detected Notifications (CLI Procedure) . . . . .	383
Configuration Statements . . . . .	383
Security Configuration Statement Hierarchy . . . . .	386
[edit security utm] Hierarchy Level . . . . .	387
[edit security policies] Hierarchy Level . . . . .	395

## Documentation and Release Notes

---

To obtain the most current version of all Juniper Networks® technical documentation, see the product documentation page on the Juniper Networks website at <http://www.juniper.net/techpubs/>.

If the information in the latest release notes differs from the information in the documentation, follow the product Release Notes.

Juniper Networks Books publishes books by Juniper Networks engineers and subject matter experts. These books go beyond the technical documentation to explore the nuances of network architecture, deployment, and administration. The current list can be viewed at <http://www.juniper.net/books>.

## Supported Platforms

---

For the features described in this document, the following platforms are supported:

- SRX100
- SRX110
- SRX210
- SRX220
- SRX240
- SRX550
- SRX650

## Using the Examples in This Manual

---

If you want to use the examples in this manual, you can use the **load merge** or the **load merge relative** command. These commands cause the software to merge the incoming configuration into the current candidate configuration. The example does not become active until you commit the candidate configuration.

If the example configuration contains the top level of the hierarchy (or multiple hierarchies), the example is a *full example*. In this case, use the **load merge** command.

If the example configuration does not start at the top level of the hierarchy, the example is a *snippet*. In this case, use the **load merge relative** command. These procedures are described in the following sections.

### Merging a Full Example

To merge a full example, follow these steps:

1. From the HTML or PDF version of the manual, copy a configuration example into a text file, save the file with a name, and copy the file to a directory on your routing platform.

For example, copy the following configuration to a file and name the file **ex-script.conf**. Copy the **ex-script.conf** file to the **/var/tmp** directory on your routing platform.

```
system {
  scripts {
    commit {
      file ex-script.xml;
    }
  }
}
interfaces {
  fxp0 {
    disable;
    unit 0 {
      family inet {
        address 10.0.0.1/24;
      }
    }
  }
}
```

2. Merge the contents of the file into your routing platform configuration by issuing the **load merge** configuration mode command:

```
[edit]
user@host# load merge /var/tmp/ex-script.conf
load complete
```

## Merging a Snippet

To merge a snippet, follow these steps:

1. From the HTML or PDF version of the manual, copy a configuration snippet into a text file, save the file with a name, and copy the file to a directory on your routing platform.

For example, copy the following snippet to a file and name the file **ex-script-snippet.conf**. Copy the **ex-script-snippet.conf** file to the **/var/tmp** directory on your routing platform.

```
commit {  
  file ex-script-snippet.xml; }
```

2. Move to the hierarchy level that is relevant for this snippet by issuing the following configuration mode command:

```
[edit]  
user@host# edit system scripts  
[edit system scripts]
```

3. Merge the contents of the file into your routing platform configuration by issuing the **load merge relative** configuration mode command:

```
[edit system scripts]  
user@host# load merge relative /var/tmp/ex-script-snippet.conf  
load complete
```

For more information about the **load** command, see the *CLI User Guide*.

---

## Documentation Conventions

[Table 1 on page xxii](#) defines notice icons used in this guide.

Table 1: Notice Icons

Icon	Meaning	Description
	Informational note	Indicates important features or instructions.
	Caution	Indicates a situation that might result in loss of data or hardware damage.
	Warning	Alerts you to the risk of personal injury or death.
	Laser warning	Alerts you to the risk of personal injury from a laser.
	Tip	Indicates helpful information.
	Best practice	Alerts you to a recommended use or implementation.

Table 2 on page xxii defines the text and syntax conventions used in this guide.

Table 2: Text and Syntax Conventions

Convention	Description	Examples
<b>Bold text like this</b>	Represents text that you type.	To enter configuration mode, type the <b>configure</b> command:  user@host> <b>configure</b>
Fixed-width text like this	Represents output that appears on the terminal screen.	user@host> <b>show chassis alarms</b>  No alarms currently active
<i>Italic text like this</i>	<ul style="list-style-type: none"> <li>Introduces or emphasizes important new terms.</li> <li>Identifies guide names.</li> <li>Identifies RFC and Internet draft titles.</li> </ul>	<ul style="list-style-type: none"> <li>A policy <i>term</i> is a named structure that defines match conditions and actions.</li> <li><i>Junos OS CLI User Guide</i></li> <li>RFC 1997, <i>BGP Communities Attribute</i></li> </ul>
<i>Italic text like this</i>	Represents variables (options for which you substitute a value) in commands or configuration statements.	Configure the machine's domain name:  [edit] root@# <b>set system domain-name</b> <i>domain-name</i>

Table 2: Text and Syntax Conventions (*continued*)

Convention	Description	Examples
Text like this	Represents names of configuration statements, commands, files, and directories; configuration hierarchy levels; or labels on routing platform components.	<ul style="list-style-type: none"><li>To configure a stub area, include the <b>stub</b> statement at the <b>[edit protocols ospf area area-id]</b> hierarchy level.</li><li>The console port is labeled <b>CONSOLE</b>.</li></ul>
< > (angle brackets)	Encloses optional keywords or variables.	<b>stub &lt;default-metric <i>metric</i>&gt;;</b>
(pipe symbol)	Indicates a choice between the mutually exclusive keywords or variables on either side of the symbol. The set of choices is often enclosed in parentheses for clarity.	<b>broadcast   multicast</b>  <b>(<i>string1</i>   <i>string2</i>   <i>string3</i>)</b>
# (pound sign)	Indicates a comment specified on the same line as the configuration statement to which it applies.	<b>rsvp { # Required for dynamic MPLS only</b>
[ ] (square brackets)	Encloses a variable for which you can substitute one or more values.	<b>community name members [ <i>community-ids</i> ]</b>
Indentation and braces ( { } )	Identifies a level in the configuration hierarchy.	<pre>[edit] routing-options {   static {     route default {       nexthop <i>address</i>;       retain;     }   } }</pre>
;(semicolon)	Identifies a leaf statement at a configuration hierarchy level.	
GUI Conventions		
Bold text like this	Represents graphical user interface (GUI) items you click or select.	<ul style="list-style-type: none"><li>In the Logical Interfaces box, select <b>All Interfaces</b>.</li><li>To cancel the configuration, click <b>Cancel</b>.</li></ul>
> (bold right angle bracket)	Separates levels in a hierarchy of menu selections.	In the configuration editor hierarchy, select <b>Protocols&gt;Ospf</b> .

## Documentation Feedback

We encourage you to provide feedback, comments, and suggestions so that we can improve the documentation. You can provide feedback by using either of the following methods:

- Online feedback rating system—On any page of the Juniper Networks TechLibrary site at <http://www.juniper.net/techpubs/index.html>, simply click the stars to rate the content, and use the pop-up form to provide us with information about your experience. Alternately, you can use the online feedback form at <http://www.juniper.net/techpubs/feedback/>.

- E-mail—Send your comments to [techpubs-comments@juniper.net](mailto:techpubs-comments@juniper.net). Include the document or topic name, URL or page number, and software version (if applicable).

## Requesting Technical Support

---

Technical product support is available through the Juniper Networks Technical Assistance Center (JTAC). If you are a customer with an active J-Care or Partner Support Service support contract, or are covered under warranty, and need post-sales technical support, you can access our tools and resources online or open a case with JTAC.

- JTAC policies—For a complete understanding of our JTAC procedures and policies, review the *JTAC User Guide* located at <http://www.juniper.net/us/en/local/pdf/resource-guides/7100059-en.pdf>.
- Product warranties—For product warranty information, visit <http://www.juniper.net/support/warranty/>.
- JTAC hours of operation—The JTAC centers have resources available 24 hours a day, 7 days a week, 365 days a year.

## Self-Help Online Tools and Resources

For quick and easy problem resolution, Juniper Networks has designed an online self-service portal called the Customer Support Center (CSC) that provides you with the following features:

- Find CSC offerings: <http://www.juniper.net/customers/support/>
- Search for known bugs: <http://www2.juniper.net/kb/>
- Find product documentation: <http://www.juniper.net/techpubs/>
- Find solutions and answer questions using our Knowledge Base: <http://kb.juniper.net/>
- Download the latest versions of software and review release notes: <http://www.juniper.net/customers/csc/software/>
- Search technical bulletins for relevant hardware and software notifications: <http://kb.juniper.net/InfoCenter/>
- Join and participate in the Juniper Networks Community Forum: <http://www.juniper.net/company/communities/>
- Open a case online in the CSC Case Management tool: <http://www.juniper.net/cm/>

To verify service entitlement by product serial number, use our Serial Number Entitlement (SNE) Tool: <https://tools.juniper.net/SerialNumberEntitlementSearch/>

## Opening a Case with JTAC

You can open a case with JTAC on the Web or by telephone.

- Use the Case Management tool in the CSC at <http://www.juniper.net/cm/>.
- Call 1-888-314-JTAC (1-888-314-5822 toll-free in the USA, Canada, and Mexico).

For international or direct-dial options in countries without toll-free numbers, see <http://www.juniper.net/support/requesting-support.html>.

## Unified Threat Management Overview

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

Unified Threat Management (UTM) is a term used to describe the consolidation of several security features into one device, protecting against multiple threat types. The advantage of UTM is streamlined installation and management of these multiple security capabilities.

The security features provided as part of the UTM solution are:

- **Antispam Filtering**—E-mail spam consists of unwanted e-mail messages, usually sent by commercial, malicious, or fraudulent entities. The antispam feature examines transmitted e-mail messages to identify e-mail spam. When the device detects an e-mail message deemed to be spam, it either drops the message or tags the message header or subject field with a preprogrammed string. The antispam feature uses a constantly updated spam block list (SBL). Sophos updates and maintains the IP-based SBL. The antispam feature is a separately licensed subscription service.
- **Content Filtering**—Content filtering blocks or permits certain types of traffic based on the MIME type, file extension, protocol command, and embedded object type. Content filtering does not require a separate license.
- **Web Filtering**—Web filtering lets you manage Internet usage by preventing access to inappropriate Web content. There are three types of Web filtering solutions. In the case of the integrated Web filtering solution, the decision-making for blocking or permitting Web access is done on the device after it identifies the category for a URL either from user-defined categories or from a category server (Websense provides the CPA Server). The integrated Web filtering feature is a separately licensed subscription service. The

redirect Web filtering solution intercepts HTTP requests and forwards the server URL to an external URL filtering server provided by Websense to determine whether to block or permit the requested Web access. Redirect Web filtering does not require a separate license. With Juniper Local Web Filtering, the decision-making for blocking or permitting Web access is done on the device after it identifies the category for a URL from user-defined categories stored on the device. With Local filtering, there is no additional Juniper license or remote category server required.

- **Full File-Based Antivirus**—A virus is executable code that infects or attaches itself to other executable code to reproduce itself. Some malicious viruses erase files or lock up systems. Other viruses merely infect files and overwhelm the target host or network with bogus data. The full file-based antivirus feature provides file-based scanning on specific Application Layer traffic checking for viruses against a virus signature database. It collects the received data packets until it has reconstructed the original application content, such as an e-mail file attachment, and then scans this content. Kaspersky Lab provides the internal scan engine. The full file-based antivirus scanning feature is a separately licensed subscription service.
- **Express Antivirus**—Express antivirus scanning is offered as a less CPU intensive alternative to the full file-based antivirus feature. The express antivirus feature, like the full antivirus feature, scans specific Application Layer traffic for viruses against a virus signature database. However, unlike full antivirus, express antivirus does not reconstruct the original application content. Rather, it just sends (streams) the received data packets, as is, to the scan engine. With express antivirus, the virus scanning is executed by a hardware pattern matching engine. This improves performance while scanning is occurring, but the level of security provided is lessened. Juniper Networks provides the scan engine. The express antivirus scanning feature is a separately licensed subscription service.
- **Sophos Antivirus**—Sophos antivirus scanning is offered as a less CPU-intensive alternative to the full file-based antivirus feature. Sophos supports the same protocols as full antivirus and functions in much the same manner; however, it has a smaller memory footprint and is compatible with lower end devices that have less memory. Sophos antivirus is as an in-the-cloud antivirus solution. The virus pattern and malware database is located on external servers maintained by Sophos (Sophos Extensible List) servers, thus there is no need to download and maintain large pattern databases on the Juniper device. The Sophos antivirus scanner also uses a local internal cache to maintain query responses from the external list server to improve lookup performance.

**NOTE:** The `sessions-per-client limit` CLI command, which imposes a session throttle to prevent a malicious user from generating large amounts of traffic simultaneously, supports the antispam, content filtering, and antivirus UTM features. It does not support Web filtering.

## Understanding UTM Custom Objects

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

Before you can configure most UTM features, you must first configure the custom objects for the feature in question. Custom objects are global parameters for UTM features. This means that configured custom objects can be applied to all UTM policies where applicable, rather than only to individual policies.

The following UTM features make use of certain custom objects:

- Anti-Virus (see [“Full Antivirus Pattern Update Configuration Overview” on page 346](#))
- Web Filtering (see [“Example: Configuring Integrated Web Filtering” on page 642](#))
- Anti-Spam (see [“Server-Based Antispam Filtering Configuration Overview” on page 53](#))
- Content Filtering (see [“Content Filtering Configuration Overview” on page 133](#))

## UTM Licensing ---

- [Understanding UTM Licensing on page 5](#)

## Understanding UTM Licensing

**Supported Platforms** [SRX Series](#)

The majority of UTM features function as a subscription service requiring a license. You can redeem this license once you have purchased your subscription license SKUs. You redeem your license by entering your authorization code and chassis serial number into the Customer Service License Management System (LMS) interface. Once your entitlement is generated, you can use the CLI from your device to send a license update request to the LMS server. The LMS server then sends your subscription license directly to the device.

NOTE: UTM requires 1 GB of memory.

Table 3: UTM Feature Subscription Service License Requirements

UTM Feature	Requires License
Antispam	Yes
Antivirus: full	Yes
Antivirus: express	Yes
Antivirus: sophos	Yes
Content Filtering	No
Web Filtering: integrated	Yes
Web Filtering: redirect	No
Web Filtering: local	No
Web Filtering: enhanced	Yes

NOTE: License enforcement is supported on all high-end SRX Series devices. Licensed features including anti-virus or Enhanced Web Filtering will not function until a license has been installed. The license must be installed after installing or upgrading to a new Junos OS Release version. Unlicensed features such as UTM blacklists and whitelists will continue to function without a license.

## WELF Logging

- [Understanding WELF Logging for UTM Features on page 7](#)

## Understanding WELF Logging for UTM Features

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

UTM features support the WELF standard. The WELF Reference defines the WebTrends industry standard log file exchange format. Any system logging to this format is compatible with Firewall Suite 2.0 and later, Firewall Reporting Center 1.0 and later, and Security Reporting Center 2.0 and later.

A WELF log file is composed of records. Each record is a single line in the file. Records are always in chronological order. The earliest record is the first record in the file; the most recent record is the last record in the file. WELF places no restrictions on log filenames or log file rotation policies.

**NOTE:** Each WELF record is composed of fields. The record identifier field (**id=**) must be the first field in a record. All other fields can appear in any order.

The following is a sample WELF record:

```
id=firewall time="2000-2-4 12:01:01" fw=192.168.0.238 pri=6 rule=3 proto=http
src=192.168.0.23 dst=6.1.0.36 rg=www.example.com/index.html op=GET result=0
rcvd=1426
```

The fields from the example WELF record include the following required elements (all other fields are optional):

- **id** (Record identifier)
- **time** (Date/time)
- **fw** (Firewall IP address or name)
- **pri** (Priority of the record)

## Understanding UTM Support for Active/Active Chassis Cluster

### Supported Platforms [SRX Series](#)

A chassis cluster environment supports UTM with:

- Packet Forwarding Engine in active/backup chassis cluster configurations with the Packet Forwarding Engine and the Routing Engine being active in the same node (On SRX Series devices).
- On SRX100, SRX210, SRX220, SRX240, SRX550, and SRX650 devices, the UTM functionality is supported in both active/active and active/backup chassis cluster configurations where the Packet Forwarding Engine can be active on both the cluster nodes and the Routing Engine and the Packet Forwarding Engine can be active in different nodes.

**NOTE:** UTM does not require a separate license for chassis cluster mode. The usual UTM license is sufficient and should be available on both of the nodes in the chassis cluster.

UTM supports stateless (that is, no state regarding UTM is synchronized between the cluster nodes) the Packet Forwarding Engine active/active chassis cluster configurations. All the UTM sessions anchored on the redundancy group being failed over will be aborted and new sessions are set up with the new primary redundancy group.

Stateful active/active cluster mode is not supported. Stateful objects like UTM sessions will not be synchronized; that is, no UTM module runtime objects (RTOs) are synchronized between the cluster nodes. You need to install UTM licenses in both the nodes independently.

UTM is supported in the following chassis cluster modes:

- **Active/active mode**—In this mode, the redundancy groups can be active on both of the cluster nodes. The transit traffic can be processed by both nodes. Any traffic between nodes transits through the fabric link.

The transit traffic includes:

- Traffic forwarded between interfaces for redundancy groups 1 and up across nodes
- Traffic forwarded between interfaces for redundancy groups 1 and up that are part of the same node but have one or more redundancy groups active on both of the nodes
- Traffic forwarded between RGO-controlled interfaces across devices (traffic from the secondary RGO is sent to the primary RGO over the fabric link for routing decisions)
- **Active/backup mode**—In this mode, all the redundancy groups are active in one cluster node. All the transit traffic is processed by this single node.

The transit traffic includes:

- Traffic forwarded between interfaces for redundancy groups 1 and up that are part of the same node
- Traffic forwarded between RGO-controlled interfaces for redundancy groups 1 and up that are in the same node

UTM is supported for the following chassis cluster failover types:

- **Manual failover**—Supports manual failover through the **set chassis cluster failover** command. Both RGO and redundancy groups 1 and up can fail over using this command.
- **RGO automatic failover**—This failover is supported through control link failure, monitoring objects (IP address, interface monitoring), or preempt/priority configuration.
- **Redundancy groups 1 and up automatic failover**—This failover is supported through monitoring objects (IP address, interface monitoring) or preempt/priority configuration. This failover leads to active link changes and can result in active/active mode.
- **Failover through reboot**—A primary node can be changed to a secondary node by rebooting the node. All redundancy groups in the node that's is rebooted will no longer be primary nodes.
- **Failover through flowd restart**—Redundancy groups 1 and up will be changed to secondary nodes when the flowd restarts.

The following UTM features are supported in chassis cluster:

- Content filtering
- URL (Web) filtering
- Antispam filtering
- Express antivirus scanning
- Full file-based antivirus scanning
- Sophos antivirus scanning

**NOTE:** Express antivirus scanning and full file-based antivirus scanning are not supported on high-end SRX Series devices.

All the UTM configurations are either maintained in the Routing Engine or pushed to the Packet Forwarding Engine from the Routing Engine. The configuration synchronization between the two nodes is taken care of by the chassis cluster infrastructure. This holds true for all the UTM modules too. You can configure UTM either from the primary or secondary node, and the same configuration will be reflected in the other node once you commit the first configuration.

**NOTE:** For high-end SRX Series devices, the Routing Engine can be active on the different node as all UTM configurations are maintained at Packet Forwarding Engine.

There is a dependency on ACL support on control links. The time taken to spawn the processes depends on the device. There will be a small delay for the Unified Threat Management daemon (utmd) to come up operationally, even though utmd daemon is running in the secondary Routing Engine, because there can be a startup delay for all the dependant daemons.

## Understanding Chassis Cluster support for UTM Modules

**Supported Platforms** [SRX100, SRX210, SRX220, SRX240, SRX550, SRX650](#)

- **Content filtering**—Content filtering blocks or permits certain types of traffic based on the MIME type, file extension, and protocol command. The content filter controls file transfers across the gateway by checking traffic against configured filter lists.

In content filtering, the user configuration (mime-pattern/filename-extension/protocol-command/content-type) is pushed from the Routing Engine to the Packet Forwarding Engine real-time (PFE-RT). The filtering decision is entirely based on the user configuration and is done on the Packet Forwarding Engine real-time (PFE-RT) side. For the transit traffic, the configuration lookup (for the block/permit decision) and the entire UTM processing occurs in the Packet Forwarding Engine itself and does not go to the Routing Engine (that is the complete UTM session resides in the Packet Forwarding Engine).

- **URL (Web) filtering**—Web filtering lookups takes place in the primary Routing Engine and both the Packet Forwarding Engines send the lookup request to the primary Routing Engine.

Four kinds of Web filtering mechanisms supported on SRX100, SRX210, SRX220, SRX240, and SRX650 devices are described in [Table 4 on page 11](#).

Table 4: Web Filtering Mechanisms for Chassis Cluster Support

Web Filtering Type	Description
Redirect Web filtering	<ul style="list-style-type: none"> <li>Decision (allow/deny) is always made by an external Websense server</li> <li>TCP connections are set up from the utmd daemon to the Websense server</li> <li>Any request to the Websense server is sent using one of these TCP connections.</li> </ul>
Integrated Web filtering	<ul style="list-style-type: none"> <li>The local URL Filtering cache maintained on the RT side is updated with the URL to category mappings received from the SurfControl content portal authority (SC-CPA) server for URL lookup requests sent to it.</li> <li>RT side also maintains a list of categories received from the SC-CPA server.</li> <li>You can configure actions for various categories received from the SC-CPA server. This configuration is maintained in RT side.</li> <li>You can define your own categories that contain a list of URLs and IP addresses. A predefined profile (ns-profile) can be used too. This configuration is also maintained on the RT side.</li> <li>URL lookups are made against the URL Filtering cache and the user-defined categories.</li> <li>If the category for the URL is not found in the local URL Filtering cache, categorization requests are sent to the utmd daemon and subsequently forwarded to the external SC-CPA Server for response.</li> </ul>
Enhanced Web Filtering	Enhanced Web Filtering is similar to integrated Web filtering. It maintains the URL Filtering cache, a list of categories from the server, and a list of user-defined categories. It performs the lookup and categorization similar to integrated Web filtering. It is similar in mechanism but differs in the server functionality to determine URL categories.
Juniper local URL filtering	You can configure URL whitelists or blacklists for the URL lookups. This configuration is maintained on the real-time side of the Packet Forwarding Engine.

- **Antispam filtering**—Antispam filtering pushes the user configuration (whitelist and blacklist) from the Routing Engine to the PFE-RT.
- **Express antivirus scanning**—In express antivirus scanning, the antivirus detection functionality is performed by the Pattern Matching Engine (PME) in the Packet Forwarding Engine of the node where the UTM traffic is anchored. The signature database is downloaded by the primary Routing Engine and synchronized to the secondary Routing Engine to be loaded in its local PME. If configured, the primary Routing Engine does the periodic signature database updates and synchronizes them to the secondary Routing Engine.
- **Full file-based antivirus scanning**—In full antivirus scanning, the Kaspersky Lab engine is responsible for scanning all the data it receives. The signature database is downloaded from external Kaspersky Lab servers and used by the scan engine in the Routing Engine. Full AV antivirus scanning is done in the Routing Engine of each node where the UTM traffic is anchored. The signature database files are downloaded by the primary Routing Engine and synchronized to the secondary Routing Engine. If configured, the primary Routing Engine performs the periodic signature database update and synchronizes it to the secondary Routing Engine.

Apart from the signature database lookup, full antivirus scanning uses the following configuration that is maintained in the RT side to determine if full antivirus scanning needs to be performed:

- Mime whitelist—A hit bypasses antivirus scanning
- Mime exception list—An exception to the whitelist
- URL whitelist—a hit bypasses antivirus scanning
- Filename extension—Only these extensions are sent for antivirus scanning

The packet processing in full antivirus scanning might occur within RT side based on the result of the user-configured lists. Otherwise, the UTM session spans across RT and RE side if full virus scanning needs to be performed.

## UTM Licensing

---

- [Updating UTM Licenses \(CLI Procedure\) on page 13](#)

### Updating UTM Licenses (CLI Procedure)

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To apply your UTM subscription license to the device, use the following CLI command:

```
user@host> request system license update
```

After you install the license and reboot the device, the device reserves more memory for UTM features, and hence decreases the session capacity. Use the **set security forwarding-process application-services enable-utm-memory** command to manually reallocate the memory for UTM features. You must reboot the device for the configuration to take effect.

## Example: Configuring WELF Logging for UTM Features

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

This example shows how to configure WELF logging for UTM features.

- [Requirements on page 14](#)
- [Overview on page 14](#)
- [Configuration on page 14](#)
- [Verification on page 15](#)

---

### Requirements

Before you begin, review the fields used to create a WELF log file and record. See [“Understanding WELF Logging for UTM Features” on page 7](#).

---

### Overview

A WELF log file is composed of records. Each record is a single line in the file. Records are always in chronological order. The earliest record is the first record in the file; the most recent record is the last record in the file. WELF places no restrictions on log filenames or log file rotation policies. In this example, the severity level is emergency and the name of the security log stream is **utm-welf**.

---

### Configuration

**CLI Quick Configuration** To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security log source-address 1.2.3.4 stream utm-welf
set security log source-address 1.2.3.4 stream utm-welf format welf
set security log source-address 1.2.3.4 stream utm-welf format welf category
  content-security
set security log source-address 1.2.3.4 stream utm-welf format welf category
  content-security severity emergency
set security log source-address 1.2.3.4 stream utm-welf format welf category
  content-security severity emergency host 5.6.7.8
```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure WELF logging for UTM features:

1. Set the security log source IP address.  

```
[edit security log]
user@host# set source-address 1.2.3.4
```

**NOTE:** You must save the WELF logging messages to a dedicated WebTrends server.

2. Name the security log stream.  

```
[edit security log]
user@host# set source-address 1.2.3.4 stream utm-welf
```
3. Set the format for the log messages.  

```
[edit security log]
user@host# set source-address 1.2.3.4 stream utm-welf format welf
```
4. Set the category of log messages that are sent.  

```
[edit security log]
user@host# set source-address 1.2.3.4 stream utm-welf format welf category
content-security
```
5. Set the severity level of log messages that are sent.  

```
[edit security log]
user@host# set source-address 1.2.3.4 stream utm-welf format welf category
content-security severity emergency
```
6. Enter the host address of the dedicated WebTrends server to which the log messages are to be sent.  

```
[edit security log]
user@host# set source-address 1.2.3.4 stream utm-welf format welf category
content-security severity emergency host 5.6.7.8
```

**Results** From configuration mode, confirm your configuration by entering the **show security log** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
user@host# show security log
stream utm-welf {
  severity emergency;
  format welf;
  category content-security;
  host {
    5.6.7.8;
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying the Security Log on page 16](#)

**Verifying the Security Log**

**Purpose** Verify that the WELF log for UTM features is complete.

**Action** From operational mode, enter the **show security utm status** command to verify if the UTM service is running or not.

## Security Configuration Statement Hierarchy

**Supported Platforms** [LN Series](#), [SRX Series](#)

Use the statements in the **security** configuration hierarchy to configure actions, certificates, dynamic virtual private networks (VPNs), firewall authentication, flow, forwarding options, group VPNs, Intrusion Detection Prevention (IDP), Internet Key Exchange (IKE), Internet Protocol Security (IPsec), logging, Network Address Translation (NAT), public key infrastructure (PKI), policies, resource manager, rules, screens, secure shell known hosts, trace options, user identification, Unified Threat Management (UTM), and zones.

Statements that are exclusive to the SRX Series devices running Junos OS are described in this section.

Each of the following topics lists the statements at a sub-hierarchy of the **[edit security]** hierarchy.

- *[edit security address-book] Hierarchy Level*
- *[edit security alarms] Hierarchy Level*
- *[edit security alg] Hierarchy Level*
- *[edit security analysis] Hierarchy Level*

## application-proxy (Security UTM)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>application-proxy {   traceoptions {     flag <i>flag</i>;   } }</pre>
<b>Hierarchy Level</b>	[edit security utm]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	Configure trace options for the application proxy.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Overview Feature Guide for Security Devices</i></li></ul>

## log (Security)

Supported Platforms [SRX Series](#)

```
Syntax log {
    cache {
        exclude exclude-name {
            destination-address destination-address;
            destination-port destination-port;
            event-id event-id;
            failure;
            interface-name interface-name;
            policy-name policy-name;
            process process-name;
            protocol protocol;
            source-address source-address;
            source-port source-port;
            success;
            user-name user-name;
        }
        limit value;
    }
    disable;
    event-rate rate;
    file {
        files max-file-number;
        name file-name;
        path binary-log-file-path;
        size maximum-file-size;
    }
    format (binary | sd-syslog | syslog);
    mode (event | stream);
    rate-cap rate-cap-value;
    (source-address source-address | source-interface interface-name);
    stream stream-name {
        category (all | content-security);
        format (binary | sd-syslog | syslog | welf);
        host {
            ip-address;
            port port-number;
        }
        severity (alert | critical | debug | emergency | error | info | notice | warning);
    }
    traceoptions {
        file {
            filename;
            files number;
            match regular-expression;
            size maximum-file-size;
            (world-readable | no-world-readable);
        }
        flag flag;
        no-remote-trace;
    }
    transport {
```

```
protocol (udp | tcp | tls);
  tls-profile tls-profile-name;
  tcp-connections tcp-connections;
}
utc-time-stamp;
}
```

**Hierarchy Level** [edit security]

**Release Information** Statement introduced in Junos OS Release 9.2.

**Description** You can set the mode of logging (event for traditional system logging or stream for streaming security logs through a revenue port to a server). You can also specify all the other parameters for security logging.

- Options**
- **disable**—Disable the security logging for the device.
  - **event-rate** *rate*—Limits the rate (0 through 1500) at which logs will be streamed per second.
  - **rate-cap** *rate-cap-value*—Works with event mode only. Limits the rate (0 through 5000) at which data plane logs will be generated per second.
  - **source-address** *source-address*—Specify a source IP address or IP address used when exporting security logs.
  - **source-interface** *interface-name*—Specify a source interface name, which is mandatory to configure **stream**.

**NOTE:** The **source-address** and **source-interface** are alternate values. Using one of the options is mandatory.

---

- **utc-time-stamp**—Specify to use UTC time for security log timestamps.

The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## format (Security Log Stream)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	format (binary   sd-syslog   syslog   welf)
<b>Hierarchy Level</b>	[edit security log stream <i>stream-name</i> ]
<b>Release Information</b>	Statement introduced in Release 10.0 of Junos OS. Updated in Release 12.1 of Junos OS.
<b>Description</b>	Set the format for remote security message logging to <b>binary</b> , <b>syslog</b> (system log), <b>sd-syslog</b> (structured system log), or <b>welf</b> . Note that for the WELF format, the category must be set to <b>content-security</b> (see <a href="#">category (Security Logging)</a> ).
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>binary</b>—Binary encoded text to conserve resources.</li> <li>• <b>sd-syslog</b>—Structured system log file.</li> <li>• <b>syslog</b>—Traditional system log file.</li> <li>• <b>welf</b>—Web Trends Extended Log Format.</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Application Tracking Feature Guide for Security Devices</i></li> <li>• <i>Master Administrator for Logical Systems Feature Guide for Security Devices</i></li> </ul>

## category (Security Logging)

---

**Supported Platforms** [SRX Series](#)

**Syntax** category (all | content-security)

**Hierarchy Level** [edit security log stream *stream-name*]

**Release Information** Statement introduced in Release 10.0 of Junos OS.

**Description** Set the category of logging to **all** or **content-security**. Note that for the WELF format, the category must be set to **content-security**.

**NOTE:** On SRX3400, SRX3600, SRX5600, and SRX 5800 devices, if the stream configuration does not specify a destination port, the default destination port will be the syslog port. If you specify a destination port in the stream configuration, then that port will be used instead.

---

- Options**
- **all**— All events are logged.
  - **content-security**—Only content security events are logged.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

- Related Documentation**
- *Application Tracking Feature Guide for Security Devices*
  - *Master Administrator for Logical Systems Feature Guide for Security Devices*

## content-filtering (Security UTM Policy)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>content-filtering {   ftp {     download-profile <i>profile-name</i>;     upload-profile <i>profile-name</i>;   }   http-profile <i>profile-name</i>;   imap-profile <i>profile-name</i>;   pop3-profile <i>profile-name</i>;   smtp-profile <i>profile-name</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the content-filtering protocols and attach this policy to a security profile to implement it.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li> </ul>

## limit (UTM Policy)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	limit <i>value</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> traffic-options sessions-per-client]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	In an attempt to consume all available resources and hinder the ability of the device, a malicious user might generate a large amount of traffic all at once. To prevent such activity from succeeding, you can impose a session throttle to limit sessions.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li> <li>• <i>UTM Overview Feature Guide for Security Devices</i></li> </ul>

## ipc

---

**Supported Platforms** [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Syntax**

```
ipc {  
    traceoptions flag flag;  
}
```

**Hierarchy Level** [edit security utm]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Configure trace options for IPC.

- Options**
- **flag**—Trace operation to perform. To specify more than one trace operation, include multiple **flag** statements.
  - **all**—Enable trace for all IPC trace options.
  - **basic**—Trace basic IPC related information.
  - **connection-manager**—Trace IPC connection manager information.
  - **connection-status**—Trace IPC connection status information.
  - **detail**—Trace IPC related detailed information.
  - **pfe**—Trace communication with PFE.
  - **utm-realtime**—Trace IPC realtime-thread information.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Overview Feature Guide for Security Devices*

## sessions-per-client

<b>Supported Platforms</b>	SRX Series
<b>Syntax</b>	<pre>sessions-per-client {   limit <i>value</i>;   over-limit (block   log-and-permit); }</pre>
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> traffic-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	In an attempt to consume all available resources and hinder the ability of the device, a malicious user might generate a large amount of traffic all at once. To prevent such activity from succeeding, you can impose a session throttle.

**NOTE:** The `sessions-per-client limit` command supports the antispam, content filtering, and antivirus UTM features. It does not support Web filtering.

<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Overview Feature Guide for Security Devices</i></li> </ul>

## smtp-profile (Security UTM Policy Antispam)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	smtp-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> anti-spam]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the antispam SMTP protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li> </ul>

## traffic-options

---

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

**Syntax**

```
traffic-options {  
  sessions-per-client {  
    limit value;  
    over-limit (block | log-and-permit);  
  }  
}
```

**Hierarchy Level** [edit security utm utm-policy *policy-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** In an attempt to consume all available resources and hinder the ability of the device, a malicious user might generate a large amount of traffic all at once. To prevent such activity from succeeding, you can impose a session throttle.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## traceoptions (Security Application Proxy)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>traceoptions {     flag <i>flag</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm application-proxy]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure tracing options for application proxy.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>flag</b>—Trace operation to perform. To specify more than one trace operation, include multiple <b>flag</b> statements.             <ul style="list-style-type: none"> <li>• <b>abort</b>—Trace aborted sessions for application proxy.</li> <li>• <b>all</b>—Trace with all flags enabled.</li> <li>• <b>anti-virus</b>—Trace anti-virus information.</li> <li>• <b>application-objects</b>—Trace application-proxy objects information.</li> <li>• <b>basic</b>—Trace application-proxy related basic information.</li> <li>• <b>buffer</b>—Trace application-proxy data buffer information.</li> <li>• <b>connection-rating</b>—Trace connection rating information.</li> <li>• <b>detail</b>—Trace application-proxy related detailed information.</li> <li>• <b>express-anti-virus</b>—Trace anti-virus express engine information.</li> <li>• <b>ftp-control</b>—Trace FTP control connection information.</li> <li>• <b>ftp-data</b>—Trace FTP data connection information.</li> <li>• <b>http</b>—Trace HTTP protocol information.</li> <li>• <b>imap</b>—Trace IMAP protocol information.</li> <li>• <b>memory</b>—Trace memory usage.</li> <li>• <b>mime</b>—Trace MIME parser information.</li> <li>• <b>parser</b>—Trace protocol parser information.</li> <li>• <b>pfe</b>—Trace communication with PFE.</li> <li>• <b>pop3</b>—Trace POP3 protocol information.</li> <li>• <b>queue</b>—Trace queue information.</li> <li>• <b>regex-engine</b>—Trace Pattern Match Engine (PME) information.</li> <li>• <b>smtp</b>—Trace SMTP protocol information.</li> <li>• <b>sophos-anti-virus</b>—Trace anti-virus sophos engine information.</li> </ul> </li> </ul>

- **tcp**—Trace TCP level information.
- **timer**—Trace timer processing.
- **utm-realtime**—Trace application-proxy realtime-thread information

**Required Privilege Level** trace—To view this statement in the configuration.  
trace-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Overview Feature Guide for Security Devices*

---

## traceoptions (Security UTM)

---

**Supported Platforms** [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Syntax** traceoptions flag *flag*;

**Hierarchy Level** [edit security utm]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Define tracing operations for UTM features.

- Options**
- **flag**—Trace operation to perform. To specify more than one trace operation, include multiple **flag** statements.
  - **all**—Enable trace for all UTM trace options.
  - **cli**—Trace CLI configuration activity and command changes.
  - **daemon**—Trace daemon information.
  - **ipc**—Trace communication events with Packet Forwarding Engine (PFE).
  - **pfe**—Trace PFE information.

**Required Privilege Level** trace—To view this statement in the configuration.  
trace-control—To add this statement to the configuration.

**Related Documentation**

## utm-policy (Application Services)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	utm-policy <i>policy-name</i> ;
<b>Hierarchy Level</b>	[edit security policies from-zone <i>zone-name</i> to-zone <i>zone-name</i> policy <i>policy-name</i> then permit application-services]
<b>Release Information</b>	Statement introduced in Junos OS Release 11.1.
<b>Description</b>	Configure a UTM policy for application services and attach this policy to a security profile to implement it.
<b>Options</b>	<i>policy-name</i> —Specify the name of the UTM policy.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## CHAPTER 3

# Administration

- [Operational Commands on page 39](#)

### Operational Commands

---

- [clear security utm session](#)
- [request system license update](#)
- [show configuration smtp](#)
- [show security utm status](#)
- [show security log](#)

## clear security utm session

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	clear security utm session
<b>Release Information</b>	Command introduced in Junos OS Release 9.5. Support for UTM in chassis cluster added in Junos OS Release 11.4.
<b>Description</b>	Clear UTM session information. With chassis cluster support for UTM, sessions on both the nodes are cleared.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show security utm session on page 315</a></li><li>• <a href="#">show security utm status on page 43</a></li><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>
<b>Output Fields</b>	This command produces no output.

## Sample Output

### clear security utm session

```
user@host> clear security utm session
```

## request system license update

---

**Supported Platforms** [LN Series, SRX Series](#)

**Syntax** request system license update

**Release Information** Command introduced in Junos OS Release 9.5.

**Description** Start autoupdating license keys from the LMS server.

**Options** **trial**—Starts autoupdating trial license keys from the LMS server.

**Required Privilege Level** maintenance

**Related Documentation**

- *Administration Guide for Security Devices*
- *UTM Overview Feature Guide for Security Devices*
- *Installation and Upgrade Guide for Security Devices*

**List of Sample Output** [request system license update on page 41](#)  
[request system license update trial on page 41](#)

**Output Fields** When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### request system license update

```
user@host> request system license update
```

Request to automatically update license keys from https://ae1.juniper.net has been sent, use show system license to check status.

#### request system license update trial

```
user@host> request system license update trial
```

Request to automatically update trial license keys from https://ae1.juniper.net has been sent, use show system license to check status.

## show configuration smtp

**Supported Platforms** [SRX Series](#)

**Syntax** show configuration smtp

**Release Information** Command introduced in Release 10.0 of Junos OS.

**Description** Display complete SMTP information.

- Options**
- apply-groups—Groups from which SMTP inherits configuration data.
  - apply-groups-except—Groups from which SMTP restricts inheriting configuration data.

**Required Privilege Level** view

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

**List of Sample Output** [show configuration smtp on page 42](#)

**Output Fields** [Table 5 on page 42](#) describes the output fields for the **show configuration smtp** command.

**Table 5: show configuration smtp**

Field Name	Field Description	Level of Output
address	SMTP server's IPv4 address	All levels
login	Configure a mail sender account to the server	All levels
password	Default sender password for user authentication	All levels

## Sample Output

### show configuration smtp

```
user@host> show configuration smtp
primary-server {
  address 218.102.48.213;
  login "dayone@example.com" {
    password "$ABC123"; ## SECRET-DATA
  }
}
```

---

## show security utm status

---

**Supported Platforms** [SRX Series](#)

**Syntax** show security utm status

**Release Information** Command introduced in Junos OS Release 9.5.  
Support for UTM in chassis cluster added in Junos OS Release 11.4.

**Description** Display whether the UTM service is running or not and status of both the nodes (with full chassis cluster support for UTM).

**Required Privilege Level** view

**Related Documentation**

- [clear security utm session on page 40](#)
- [show security utm session on page 315](#)
- *Junos OS UTM Library for Security Devices*

**Output Fields** show security utm status

Output fields are listed in the approximate order in which they appear.

## show security utm status

```
user@host> show security utm status
UTM service status: Running
```

## show security log

---

**Supported Platforms** [SRX Series](#)

**Syntax** `show security log {all|destination-address|destination-port|event-id|failure|interface-name|newer-than|older-than|process|protocol|severity|sort-by|source-address|source-port|success|user}`

**Release Information** Command introduced in Release 11.2 of Junos OS.

**Description** Display security event logs. This command continuously displays security events on the screen. To stop the display, press Ctrl+c.

**Options**

- all**—Displays all audit event logs stored in the device memory.
- destination-address**—Displays audit event logs with the specified destination address.
- destination-port**—Displays audit event logs with the specified destination port.
- event-id**—Displays audit event logs with the specified event identification number.
- failure**—Displays failed audit event logs.
- interface-name**—Displays audit event logs with the specified interface.
- newer-than**—Displays audit event logs newer than the specified date and time.
- older-than**—Displays audit event logs older than the specified date and time.
- process**—Displays audit event logs with the specified process that generated the event.
- protocol**—Displays audit event logs generated through the specified protocol.
- severity**—Displays audit event logs generated with the specified severity.
- sort-by**—Displays audit event logs generated sorted with the specified options.
- source-address**—Displays audit event logs with the specified source address.
- source-port**—Displays audit event logs with the specified source port.
- success**—Displays successful audit event logs.
- username**—Displays audit event logs generated for the specified user.

**Required Privilege Level** view

**Related Documentation**

- *exclude (Security Log)*
- *clear security log*

**List of Sample Output** [show security log on page 45](#)

**Output Fields** Table 6 on page 45 lists the output fields for the **show security log** command. Output fields are listed in the approximate order in which they appear.

**Table 6: show security log Output Fields**

Field Name	Field Description
Event time	The timestamp of the events received.  On SRX Series devices, security logs were always timestamped using the UTC time zone by running <b>set system time-zone utc</b> and <b>set security log utc-timestamp</b> CLI commands. Now, time zone can be defined using the local time zone by running the <b>set system time-zone time-zone</b> command to specify the local time zone that the system should use when timestamping the security logs.
Message	Security events are listed.

## Sample Output

### show security log

```

user@host> show security log

## Antispam Filtering Overview

### Supported Platforms [SRX Series](#)

Spam consists of unwanted e-mail messages, usually sent by commercial, malicious, or fraudulent entities. The antispam feature examines transmitted e-mail messages to identify spam. When the device detects a message deemed to be spam, it blocks the e-mail message or tags the e-mail message header or subject with a preprogrammed string.

Antispam filtering allows you to use both a third-party server-based spam block list (SBL) and to optionally create your own local whitelists (benign) and blacklists (malicious) for filtering against e-mail messages. The antispam feature is not meant to replace your antispam server, but to complement it.

## Server-Based Antispam Filtering

---

- [Understanding Server-Based Antispam Filtering on page 50](#)

## Understanding Server-Based Antispam Filtering

Supported Platforms [SRX Series](#)

**NOTE:** Server-based spam filtering supports only IP-based spam block list blacklist lookup. Sophos updates and maintains the IP-based spam block list. Server-based antispam filtering is a separately licensed subscription service. When your antispam license key expires, you can continue to use locally defined blacklists and whitelists.

Server-based antispam filtering requires Internet connectivity with the spam block list (SBL) server. Domain Name Service (DNS) is required to access the SBL server. The firewall performs SBL lookups through the DNS protocol. The lookups are against the IP address of the sender (or relaying agent) of the e-mail, adding the name of the SBL server as the authoritative domain. The DNS server then forwards each request to the SBL server, which returns a DNS response to the device. The device then interprets the DNS response to determine if the e-mail sender is a spammer.

IP addresses that are included in the block lists are generally considered to be invalid addresses for mail servers or easily compromised addresses. Criteria for listing an IP address as a spammer on the SBL can include:

- Running an SMTP open relay service
- Running open proxy servers (of various kinds)
- Being a zombie host possibly compromised by a virus, worm, Trojan, or spyware
- Using a dynamic IP range
- Being a confirmed spam source with a known IP address

By default, the device first checks incoming e-mail against local whitelists and blacklists. If there are no local lists, or if the sender is not found on local lists, the device proceeds to query the SBL server over the Internet. When both server-based spam filtering and local list spam filtering are enabled, checks are done in the following order:

1. The local whitelist is checked. If there is a match, no further checking is done. If there is no match...
2. The local blacklist is checked. If there is a match, no further checking is done. If there is no match...
3. The SBL server list is checked.

**NOTE:** SBL server matching stops when the antispam license key is expired.

## Local List Antispam Filtering

- [Understanding Local List Antispam Filtering on page 51](#)

### Understanding Local List Antispam Filtering

#### Supported Platforms [SRX Series](#)

When creating your own local whitelist and blacklist for antispam filtering, you can filter against domain names, e-mail addresses, and/or IP addresses. Pattern matching works a bit differently depending upon the type of matching in question. For example, pattern matching for domain names uses a longest suffix match algorithm. If the sender e-mail address has a domain name of aaa.bbb.ccc, the device tries to match "aaa.bbb.ccc" in the list. If no match is found, it tries to match "bbb.ccc", and then "ccc". IP address matching, however, does not allow for partial matches.

Antispam filtering uses local lists for matching in the following manner:

1. **Sender IP:** The sender IP is checked against the local whitelist, then the local blacklist, and then the SBL IP-based server (if enabled).
2. **Sender Domain:** The domain name is checked against the local whitelist and then against the local blacklist.
3. **Sender E-mail Address:** The sender e-mail address is checked against the local whitelist and then against the local blacklist.

By default, the device first checks incoming e-mail against the local whitelist and blacklist. If the sender is not found on either list, the device proceeds to query the SBL server over the Internet. When both server-based antispam filtering and local list antispam filtering are enabled, checks are done in the following order:

1. The local whitelist is checked. If there is a match, no further checking is done. If there is no match...
2. The local blacklist is checked. If there is a match, no further checking is done. If there is no match...
3. The SBL server list is checked.

**NOTE:** Local blacklist and whitelist matching continues after the antispam license key is expired.

- [Configuration Statements on page 67](#)

### Server-Based Antispam Filtering

---

- [Server-Based Antispam Filtering Configuration Overview on page 53](#)
- [Example: Configuring Server-Based Antispam Filtering on page 54](#)

### Server-Based Antispam Filtering Configuration Overview

#### Supported Platforms [SRX Series](#)

For each UTM feature, configure feature parameters in the following order:

1. Configure UTM custom objects for the feature:

```
user@host# set security utm custom-objects
```

2. Configure the main feature parameters, using feature profiles.

```
user@host# set security utm feature-profile anti-spam
```

3. Configure a UTM policy for each protocol, and attach this policy to a profile.

```
user@host# set security utm utm-policy utmp1 anti-spam smtp-profile smtp1
```

**NOTE:** Antispam filtering is only supported for the SMTP protocol.

4. Attach the UTM policy to a security policy.

```
user@host# set security policies from-zone trust to-zone untrust policy p1 then permit  
application-services utm-policy utmp1
```

## Example: Configuring Server-Based Antispam Filtering

### Supported Platforms [SRX Series](#)

This example shows how to configure server-based antispam filtering.

- [Requirements on page 54](#)
- [Overview on page 54](#)
- [Configuration on page 54](#)
- [Verification on page 59](#)

---

### Requirements

Before you begin, review how to configure the feature parameters for each UTM feature. See [“Server-Based Antispam Filtering Configuration Overview” on page 53](#).

---

### Overview

Server-based antispam filtering requires Internet connectivity with the spam block list (SBL) server. Domain Name Service (DNS) is required to access the SBL server.

---

### Configuration

#### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile anti-spam sbl profile sblprofile1 sbl-default-server
set security utm feature-profile anti-spam sbl profile sblprofile1 sbl-default-server
  spam-action block
set security utm feature-profile anti-spam sbl profile sblprofile1 sbl-default-server
  custom-tag-string ***spam***
set security utm utm-policy spampolicy1 anti-spam smtp-profile sblprofile1
set security policies from-zone trust to-zone untrust policy utmsecuritypolicy1 match
  source-address any
set security policies from-zone trust to-zone untrust policy utmsecuritypolicy1 match
  destination-address any
set security policies from-zone trust to-zone untrust policy utmsecuritypolicy1 match
  application junos-smtp
set security policies from-zone trust to-zone untrust policy utmsecuritypolicy1 then permit
  application-services utm-policy spampolicy1
```

**GUI Step-by-Step  
Procedure**

To configure server-based antispam filtering:

1. Configure a profile and enable/disable the SBL server lookup. Select **Configure>Security>UTM>Anti-Spam**.
  - a. In the Anti-Spam profiles configuration window, click **Add** to configure a profile for the SBL server, or click **Edit** to modify an existing item.
  - b. In the Profile name box, enter a unique name for the antispam profile that you are creating.
  - c. If you are using the default server, select **Yes** next to Default SBL server. If you are not using the default server, select **No**.

**NOTE:** The SBL server is predefined on the device. The device comes preconfigured with the name and address of the SBL server. If you do not select Yes, you are disabling server-based spam filtering. You should disable it only if you are using only local lists or if you do not have a license for server-based spam filtering.

- d. In the Custom tag string box, enter a custom string for identifying a message as spam. By default, the devices uses **\*\*\*SPAM\*\*\***.
  - e. From the antispam action list, select the action that the device should take when it detects spam. Options include Tag subject, Block email, and Tag header.
2. Configure a UTM policy for SMTP to which you attach the antispam profile.
  - a. Select **Configure>Security>Policy>UTM Policies**.
  - b. In the UTM policy configuration window, click **Add**.
  - c. In the policy configuration window, select the **Main** tab.
  - d. In the Policy name box, type a unique name for the UTM policy.
  - e. In the Session per client limit box, type a session per client limit. Valid values range from 0 to 2000.
  - f. From the Session per client over limit list, select the action that the device should take when the session per client limit for this UTM policy is exceeded. Options include Log and permit and Block.
  - g. Select the **Anti-Spam profiles** tab in the pop-up window.
  - h. From the SMTP profile list, select an antispam profile to attach to this UTM policy.

3. Attach the UTM policy to a security policy.
  - a. Select **Configure>Security>Policy>FW Policies**.
  - b. In the Security Policy window, click **Add** to configure a security policy with UTM or click **Edit** to modify an existing policy.
  - c. In the Policy tab, type a name in the **Policy Name** box.
  - d. Next to From Zone, select a zone from the list.
  - e. Next to To Zone, select a zone from the list.
  - f. Choose a source address.
  - g. Choose a destination address.
  - h. Choose an application by selecting **junos-smtp** (for antispam) in the Application Sets box and move it to the Matched box.
  - i. Next to Policy Action, select one of the following: **Permit**, **Deny**, or **Reject**.

**NOTE:** When you select Permit for Policy Action, several additional fields become available in the Applications Services tab, including UTM Policy.

- j. Select the **Application Services** tab.
  - k. Next to UTM Policy, select the appropriate policy from the list. This attaches your UTM policy to the security policy.
  - l. Click **OK** to check your configuration and save it as a candidate configuration.
  - m. If the policy is saved successfully, you receive a confirmation, and you must click **OK** again. If the profile is not saved successfully, click **Details** in the pop-up window to discover why.

**NOTE:**

- You must activate your new policy to apply it.
- In SRX Series devices the confirmation window that notifies you that the policy is saved successfully, disappears automatically.

- n. If you are done configuring the device, click **Commit Options>Commit**.

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure server-based antispam filtering:

1. Create a profile.

```
[edit security]
user@host# set utm feature-profile anti-spam sbl profile sblprofile1
```

2. Enable or disable the default SBL server lookup.

```
[edit security]
user@host# set utm feature-profile anti-spam sbl profile sblprofile1
sbl-default-server
```

**NOTE:** If you are using server-based antispam filtering, you should type `sbl-default-server` to enable the default SBL server. (The SBL server is predefined on the device. The device comes preconfigured with the name and address of the SBL server.) You should disable server-based antispam filtering using the `no-sbl-default-server` option only if you are using only local lists or if you do not have a license for server-based spam filtering.

3. Configure the action to be taken by the device when spam is detected (block, tag-header, or tag-subject).

```
[edit security]
user@host# set utm feature-profile anti-spam sbl profile sblprofile1sbl-default-server
spam-action block
```

4. Configure a custom string for identifying a message as spam.

```
[edit security]
user@host# set utm feature-profile anti-spam sbl profile sblprofile1
sbl-default-server custom-tag-string ***spam***
```

5. Attach the spam feature profile to the UTM policy.

```
[edit security]
user@host# set utm utm-policy spampolicy1 anti-spam smtp-profile sblprofile1
```

6. Configure a security policy for UTM to which to attach the UTM policy.

```
[edit]
user@host# set security policies from-zone trust to-zone untrust policy
utmsecuritypolicy1 match source-address any
user@host# set security policies from-zone trust to-zone untrust policy
utmsecuritypolicy1 match destination-address any
user@host# set security policies from-zone trust to-zone untrust policy
utmsecuritypolicy1 match application junos-smtp
user@host# set security policies from-zone trust to-zone untrust policy
utmsecuritypolicy1 then permit application-services utm-policy spampolicy1
```

**NOTE:** The device comes preconfigured with a default antispam policy. The policy is called junos-as-defaults. It contains the following configuration parameters:

```
anti-spam {
  sbl {
    profile junos-as-defaults {
      sbl-default-server;
      spam-action block;
      custom-tag-string "****SPAM****";
    }
  }
}
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm** and **show security policies** commands. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
user@host# show security utm
feature-profile {
  anti-spam {
    sbl {
      profile sblprofile1 {
        sbl-default-server;
        spam-action block;
        custom-tag-string ***spam***;
      }
    }
  }
}
utm-policy spampolicy1 {
  anti-spam {
    smtp-profile sblprofile1;
  }
}
```

```
[edit]
user@host# show security policies
from-zone trust to-zone untrust {
  policy utmsecuritypolicy1 {
    match {
      source-address any;
      destination-address any;
      application junos-smtp;
    }
    then {
      permit {
        application-services {
          utm-policy spampolicy1;
        }
      }
    }
  }
}
```

```
}
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying Antispam Statistics on page 59](#)

#### *Verifying Antispam Statistics*

**Purpose** Verify the antispam statistics.

**Action** From operational mode, enter the **show security utm anti-spam status** and **show security utm anti-spam statistics** commands.

The following information appears:

```
SBL Whitelist Server:
SBL Blacklist Server:
msgsecurity.example.net
DNS Server:
Primary : 1.2.3.4, Src Interface: ge-0/0/0
Secondary: 2.3.4.5, Src Interface: ge-0/0/1
Ternary : 0.0.0.0, Src Interface: fe-0/0/2

### Local List Antispam Filtering Configuration Overview

#### Supported Platforms [SRX Series](#)

For each UTM feature, configure feature parameters in the following order:

1. Configure UTM custom objects for the feature:

```
user@host# set security utm custom-objects url-pattern url-pattern-name
```

2. Configure the main feature parameters, using feature profiles.

```
user@host# set security utm feature-profile anti-spam as-profile-name
```

3. Configure a UTM policy for each protocol, and attach this policy to a profile.

```
user@host# set security utm utm-policy utmp1 anti-spam smtp-profile smtp1
```

4. Attach the UTM policy to a security policy.

```
user@host# set security policies from-zone trust to-zone untrust policy p1 then permit  
application-services utm-policy utmp1
```

### Example: Configuring Local List Antispam Filtering

#### Supported Platforms [SRX Series](#)

This example shows how to configure local list antispam filtering.

- [Requirements on page 61](#)
- [Overview on page 61](#)
- [Configuration on page 61](#)
- [Verification on page 66](#)

## Requirements

Before you begin, review how to configure the feature parameters for each UTM feature. See [“Local List Antispam Filtering Configuration Overview” on page 60](#).

## Overview

Antispam filtering uses local lists for matching. When creating your own local whitelist and blacklist for antispam filtering, you can filter against domain names, e-mail addresses, and/or IP addresses.

## Configuration

### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm custom-objects url-pattern as-black value [150.61.8.134]
set security utm custom-objects url-pattern as-white value [150.1.2.3]
set security utm feature-profile anti-spam address-whitelist as-white
set security utm feature-profile anti-spam sbl profile localprofile1
set security utm feature-profile anti-spam sbl profile localprofile1 spam-action block
set security utm feature-profile anti-spam sbl profile localprofile1 custom-tag-string
  ***spam***
set security utm utm-policy spampolicy2 anti-spam smtp-profile localprofile1
set security policies from-zone trust to-zone untrust policy utmsecuritypolicy2 match
  source-address any
set security policies from-zone trust to-zone untrust policy utmsecuritypolicy2 match
  destination-address any
set security policies from-zone trust to-zone untrust policy utmsecuritypolicy2 match
  application junos-smtp
set security policies from-zone trust to-zone untrust policy utmsecuritypolicy2 then permit
  application-services utm-policy spampolicy2
```

### GUI Step-by-Step Procedure

To configure local list antispam filtering:

1. Create local whitelist and blacklist custom objects by configuring a URL pattern list.
  - a. Select **Configure>Security>UTM>Custom Objects**.
  - b. In the UTM custom objects configuration window, select the **URL Pattern List** tab.
  - c. Click **Add** to create URL pattern lists.
  - d. Next to URL Pattern Name, type a unique name.

**NOTE:** If you are creating a whitelist, it is helpful to indicate this in the list name. The same applies to a blacklist. The name you enter here becomes available in the Address Whitelist and Address Blacklist fields when you are configuring your antispam profiles.

- e. Next to URL Pattern Value, type the URL pattern for whitelist or blacklist antispam filtering.
2. Configure antispam filtering to use the whitelist and blacklist custom objects.
  - a. Select **Configure>Security>UTM>Global options**.
  - b. In the right pane, select the **Anti-Spam** tab.
  - c. Under Anti-Spam, select an Address Whitelist and/or an Address Blacklist from the list for local lists for spam filtering. (These lists are configured as custom objects.)
  - d. Click **OK**.
  - e. If the configuration item is saved successfully, you receive a confirmation, and you must click **OK** again. If it is not saved successfully, click **Details** in the pop-up window to discover why.
  - f. In the left pane under Security, select the **Anti-Spam** tab.
  - g. Click **Add** to configure an anti-spam profile. The profile configuration pop-up window appears.
  - h. In the Profile name box, enter a unique name.
  - i. If you are using the default server, select **Yes** beside Default SBL server. If you are not using the default server, select **No**.

**NOTE:** If you select No, you are disabling server-based spam filtering. You disable it only if you are using local lists or if you do not have a license for server-based spam filtering.

- j. In the Custom tag string box, type a custom string for identifying a message as spam. By default, the device uses **\*\*\*SPAM\*\*\***.
  - k. In the Actions list, select the action that the device should take when it detects spam. Options include Tag subject, Block email, and Tag header.
3. Configure a UTM policy for SMTP to which you attach the antispam profile.
    - a. Select **Configure>Security>Policy>UTM Policies**.
    - b. In the UTM policy configuration window, click **Add** to configure a UTM policy. The policy configuration pop-up window appears.
    - c. Select the **Main** tab.
    - d. In the Policy name box, type a unique name.
    - e. In the Session per client limit box, type a session per client limit. Valid values range from 0 through 2000.
    - f. From the Session per client over limit list, select the action that the device should take when the session per client limit for this UTM policy is exceeded. Options include Log and permit and Block.
    - g. Select the **Anti-Spam profiles** tab.
    - h. From the SMTP profile list, select the antispam profile that you are attaching to this UTM policy.
  4. Attach the UTM policy to a security policy.
    - a. Select **Configure>Security>Policy>FW Policies**.
    - b. In the Security Policy window, click **Add** to configure a security policy with UTM. The policy configuration pop-up window appears.
    - c. In the Policy tab, type a name in the **Policy Name** box.
    - d. Next to From Zone, select a zone from the list.
    - e. Next to To Zone, select a zone from the list.
    - f. Choose a source address.
    - g. Choose a destination address.
    - h. Choose an application by selecting **junos-smtp** (for antispam) in the Application Sets box and move it to the Matched box.
    - i. Next to Policy Action, select one of the following: **Permit**, **Deny**, or **Reject**.

**NOTE:** When you select Permit for policy action, several additional fields become available in the Applications Services tab, including UTM Policy.

- j. Select the **Application Services** tab.
- k. Next to UTM Policy, select the appropriate policy from the list. This attaches your UTM policy to the security policy.
- l. Click **OK** to check your configuration and save it as a candidate configuration.
- m. If the policy is saved successfully, you receive a confirmation, and you must click **OK** again. If the profile is not saved successfully, click **Details** in the pop-up window to discover why.

**NOTE:** You must activate your new policy to apply it.

- n. If you are done configuring the device, click **Commit Options>Commit**.

#### Step-by-Step Procedure

The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure local list antispam filtering:

1. Configure the local list spam blocking by first creating your global local spam lists.  

```
[edit security]
user@host# set utm custom-objects url-pattern as-black value [150.61.8.134]
user@host# set utm custom-objects url-pattern as-white value [150.1.2.3]
```

2. Configure the local list antispam feature profile by first attaching your custom-object blacklist or whitelist or both.

```
[edit security]
user@host# set utm feature-profile anti-spam address-whitelist as-white
```

**NOTE:** When both the whitelist and the blacklist are in use, the whitelist is checked first. If there is no match, then the blacklist is checked.

3. Configure a profile for your local list spam blocking.

```
[edit security]
user@host# set utm feature-profile anti-spam sbl profile localprofile1
```

**NOTE:** Although you are not using the sbl for local list spam blocking, you configure your profile from within that command similar to the server-based spam blocking procedure.

4. Configure the action to be taken by the device when spam is detected (block, tag-header, tag-subject).

```
[edit security]
user@host# set utm feature-profile anti-spam sbl profile localprofile1 spam-action
block
```

5. Configure a custom string for identifying a message as spam.

```
[edit security]
user@host# set utm feature-profile anti-spam sbl profile localprofile1
custom-tag-string ***spam***
```

6. Attach the spam feature profile to the UTM policy.

```
[edit security]
user@host# set utm utm-policy spampolicy2 anti-spam smtp-profile localprofile1
```

7. Configure a security policy for UTM, and attach the UTM policy to the security policy.

```
[edit]
user@host# set security policies from-zone trust to-zone untrust policy
utmsecuritypolicy2 match source-address any
user@host# set security policies from-zone trust to-zone untrust policy
utmsecuritypolicy2 match destination-address any
user@host# set security policies from-zone trust to-zone untrust policy
utmsecuritypolicy2 match application junos-smtp
user@host# set security policies from-zone trust to-zone untrust policy
utmsecuritypolicy2 then permit application-services utm-policy spampolicy2
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm** and **show security policies** commands. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
user@host# show security utm
custom-objects {
  anti-spam {
    url-pattern patternwhite;
    address-whitelist as-white;
    sbl {
      profile localprofile1 {
        spam-action block;
        custom-tag-string ***spam***;
      }
    }
  }
}
utm-policy spampolicy2 {
  anti-spam {
    smtp-profile localprofile1;
  }
}
```

```
[edit]
user@host# show security policies
from-zone trust to-zone untrust {
  policy utmsecuritypolicy2 {
    match {
      source-address any;
      destination-address any;
      application junos-smtp;
```

```
    }  
    then {  
        permit {  
            application-services {  
                utm-policy spampolicy2;  
            }  
        }  
    }  
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying Antispam Statistics on page 66](#)

#### *Verifying Antispam Statistics*

**Purpose** Verify the antispam statistics.

**Action** From operational mode, enter the **show security utm anti-spam status** and **show security utm anti-spam statistics** commands.

The following information appears:

```
SBL Whitelist Server:  
SBL Blacklist Server:  
msgsecurity.juniper.net  
DNS Server:  
Primary : 1.2.3.4, Src Interface: ge-0/0/0  
Secondary: 2.3.4.5, Src Interface: ge-0/0/1  
Ternary : 0.0.0.0, Src Interface: fe-0/0/2  
  
Total connections: #  
Denied connections: #  
Total greetings: #  
Denied greetings: #  
Total e-mail scanned: #  
White list hit: #  
Black list hit: #  
Spam total: #  
Spam tagged: #  
Spam dropped: #  
DNS errors: #  
Timeout errors: #  
Return errors: #  
Invalid parameter errors: #  
Statistics start time:  
Statistics for the last 10 days.
```

## Security Configuration Statement Hierarchy

### Supported Platforms [LN Series](#), [SRX Series](#)

Use the statements in the **security** configuration hierarchy to configure actions, certificates, dynamic virtual private networks (VPNs), firewall authentication, flow, forwarding options, group VPNs, Intrusion Detection Prevention (IDP), Internet Key Exchange (IKE), Internet Protocol Security (IPsec), logging, Network Address Translation (NAT), public key infrastructure (PKI), policies, resource manager, rules, screens, secure shell known hosts, trace options, user identification, Unified Threat Management (UTM), and zones. Statements that are exclusive to the SRX Series devices running Junos OS are described in this section.

Each of the following topics lists the statements at a sub-hierarchy of the **[edit security]** hierarchy.

- *[edit security address-book] Hierarchy Level*
- *[edit security alarms] Hierarchy Level*
- *[edit security alg] Hierarchy Level*
- *[edit security analysis] Hierarchy Level*
- *[edit security application-firewall] Hierarchy Level*
- *[edit security application-tracking] Hierarchy Level*
- *[edit security certificates] Hierarchy Level*
- *[edit security datapath-debug] Hierarchy Level*
- *[edit security dynamic-vpn] Hierarchy Level*
- *[edit security firewall-authentication] Hierarchy Level*
- *[edit security flow] Hierarchy Level*
- *[edit security forwarding-options] Hierarchy Level*
- *[edit security forwarding-process] Hierarchy Level*
- *[edit security gprs] Hierarchy Level*
- *[edit security group-vpn] Hierarchy Level*
- *[edit security idp] Hierarchy Level*
- *[edit security ike] Hierarchy Level*

## address-whitelist

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	address-whitelist <i>list-name</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-spam]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Enter an address-whitelist (or blacklist) custom-object for local list spam filtering.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## address-blacklist

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	address-blacklist <i>list-name</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-spam]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	Enter an address blacklist (or whitelist) custom object for local list spam filtering.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## anti-spam (Security UTM Policy)

---

**Supported Platforms** [SRX Series](#)

**Syntax** anti-spam {  
    smtp-profile *profile-name*;  
}

**Hierarchy Level** [edit security utm utm-policy *policy-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure a UTM policy for the antispam SMTP protocol and attach this policy to a security profile to implement it.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege** security—To view this statement in the configuration.  
**Level** security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## anti-spam (Security Feature Profile)

<b>Supported Platforms</b>	SRX Series
<b>Syntax</b>	<pre> anti-spam {   address-blacklist <i>list-name</i>;   address-whitelist <i>list-name</i>;   sbl {     profile <i>profile-name</i> {       custom-tag-string [<i>string</i>];       (sbl-default-server   no-sbl-default-server);       spam-action (block   tag-header   tag-subject);     }   }   traceoptions flag <i>flag</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure UTM antispam features.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>Junos OS UTM Library for Security Devices</li> </ul>

## custom-tag-string

<b>Supported Platforms</b>	SRX Series
<b>Syntax</b>	custom-tag-string [ <i>string</i> ];
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-spam sbl profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a custom string for identifying a message as spam.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>Junos OS UTM Library for Security Devices</li> </ul>

## custom-objects

---

**Supported Platforms** [SRX Series](#)

**Syntax**

```
custom-objects {  
  custom-url-category object-name {  
    value [value];  
  }  
  filename-extension object-name {  
    value [value];  
  }  
  mime-pattern object-name {  
    value [value];  
  }  
  protocol-command object-name {  
    value [value];  
  }  
  url-pattern object-name {  
    value [value];  
  }  
}
```

**Hierarchy Level** [edit security utm]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Configure custom objects before configuring UTM feature-profile features.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommended having a custom category name be the same as the predefined category name.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level**

security—	To view this statement in the configuration.
security-control—	To add this statement to the configuration.

## flag (SMTP)

---

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

**Syntax**

```
flag {
  all;
  configuration;
  IPC;
  protocol-exchange;
  send-request;
}
```

**Hierarchy Level** [edit smtp traceoptions]

**Release Information** Statement added in Junos OS Release 10.0.

**Description** Set flag for the SMTP traceoptions.

**Options** The following flag options are supported:

- **IPC**—Trace interprocess communication.
- **all**—Trace everything.
- **configuration**—Trace configuration event.
- **protocol-exchange**—Trace SMTP protocol exchanges.
- **send-request**—Trace send mail request event.

**Required Privilege Level**

system—To view this statement in the configuration.
system-control—To add this statement to the configuration.

**Related Documentation**

## profile (Security Antispam SBL)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	<pre>profile <i>profile-name</i> {   custom-tag-string [<i>string</i>];   (sbl-default-server   no-sbl-default-server);   spam-action (block   tag-header   tag-subject); }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-spam sbl]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Create a profile for the antispam sbl feature. This profile includes all subsequent configuration options.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## sbl

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	<pre>sbl {   profile <i>profile-name</i> {     custom-tag-string [<i>string</i>];     (sbl-default-server   no-sbl-default-server);     spam-action (block   tag-header   tag-subject);   } }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-spam]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure UTM server-based antispam features.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## sbl-default-server

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	sbl-default-server;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-spam sbl profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Enable the default SBL server lookup. You should enable this feature if you are using server-based spam filtering. (The SBL server is predefined on the device. It ships with the name and address of the SBL server.)
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Junos OS UTM Library for Security Devices</a></li></ul>

## secondary-server

---

<b>Supported Platforms</b>	<a href="#">SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650</a>
<b>Syntax</b>	<pre>secondary-server {     address <i>ipv4-address</i>;     login <i>sender-email-address</i> {         password <i>password</i>;     } }</pre>
<b>Hierarchy Level</b>	[edit smtp]
<b>Release Information</b>	Statement added in Junos OS Release 10.0.
<b>Description</b>	Configure Simple Mail Transfer Protocol (SMTP) secondary server for access authorization for SMTP requests.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	system—To view this statement in the configuration. system-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Junos OS UTM Library for Security Devices</a></li></ul>

## sessions-per-client

**Supported Platforms** [SRX Series](#)

**Syntax** `sessions-per-client {  
    limit value;  
    over-limit (block | log-and-permit);  
}`

**Hierarchy Level** `[edit security utm utm-policy policy-name traffic-options]`

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** In an attempt to consume all available resources and hinder the ability of the device, a malicious user might generate a large amount of traffic all at once. To prevent such activity from succeeding, you can impose a session throttle.

**NOTE:** The `sessions-per-client limit` command supports the antispam, content filtering, and antivirus UTM features. It does not support Web filtering.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege** security—To view this statement in the configuration.  
**Level** security-control—To add this statement to the configuration.

## SMTP Configuration Statement Hierarchy

**Supported Platforms** [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

```
smtp {
  primary-server {
    address ipv4-address;
    login sender-email-address {
      password password;
    }
  }
  secondary-server {
    address ipv4-address;
    login sender-email-address {
      password password;
    }
  }
  traceoptions {
    flag {
      all;
      configuration;
      IPC;
```

```
        protocol-exchange;  
        send-request;  
    }  
}  
}
```

---

## spam-action

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

**Syntax** spam-action (block | tag-header | tag-subject);

**Hierarchy Level** [edit security utm feature-profile anti-spam sbl profile *profile-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure the action to be taken by the device when spam is detected.

- Options**
- **block**—Block e-mail.
  - **tag-header**—Tag header of e-mail.
  - **tag-subject**—Tag subject of e-mail.

**Required Privilege Level**

security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

    pass-through {
        access-profile profile-name;
        client-match user-or-group-name;
        ssl-termination-profile profile-name;
        web-redirect;
        web-redirect-to-https;
    }
    web-authentication {
        client-match user-or-group-name;
    }
}
services-offload;
tcp-options {
    sequence-check-required;
    syn-check-required;
}
tunnel {
    ipsec-group-vpn group-vpn;
    ipsec-vpn vpn-name;
    pair-policy pair-policy;
}
}
reject;
}
```

Hierarchy Level	[edit security policies from-zone <i>zone-name</i> ]
Release Information	Statement introduced in Junos OS Release 8.5. Support for the <b>services-offload</b> and <b>junos-host</b> options added in Junos OS Release 11.4. Support for the <b>source-identity</b> option added in Junos OS Release 12.1. Support for the <b>ssl-termination-profile</b> and <b>web-redirect-to-https</b> options added in Junos OS Release 12.1X44-D10.
Description	Specify a destination zone to be associated with the security policy.

- Options**
- **zone-name**—Name of the destination zone object.
  - **junos-host**—Default security zone for self-traffic of the device.

The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## traceoptions (SMTP)

---

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

**Syntax**

```
traceoptions {
    flag {
        all;
        configuration;
        IPC;
        protocol-exchange;
        send-request;
    }
}
```

**Hierarchy Level** [edit smtp]

**Release Information** Statement added in Junos OS Release 10.0.

**Description** Set the Simple Mail Transfer Protocol (SMTP) traceoptions.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** system—To view this statement in the configuration.  
system-control—To add this statement to the configuration.

- Related Documentation**
- *Junos OS UTM Library for Security Devices*

## traceoptions (Security Antispam)

---

**Supported Platforms** [SRX Series](#)

**Syntax** traceoptions flag *flag*;

**Hierarchy Level** [edit security utm feature-profile anti-spam]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Define tracing operations for UTM antispam features.

- Options**
- **flag**:
    - **all**—Enable all antispam trace flags.
    - **manager** —Trace antispam manager information.
    - **sbl**—Trace SBL server information.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## url-pattern

**Supported Platforms** [SRX Series](#)

**Syntax** `url-pattern object-name {  
    value [value];  
}`

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Use URL pattern lists to create custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

- Options**
- ***object-name***—Name of the URL list object.
  - ***value value***—Value of the URL list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**

security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## CHAPTER 6

# Administration

- [Spam Message Handling on page 121](#)
- [Operational Commands on page 122](#)

## Spam Message Handling

---

- [Handling Spam Messages on page 121](#)

### Handling Spam Messages

#### Supported Platforms [SRX Series](#)

There are two possible actions the device can take when spam is detected. It can perform a drop action or a tag action.

- [Blocking Detected Spam on page 121](#)
- [Tagging Detected Spam on page 122](#)

#### Blocking Detected Spam

---

The device can block and drop detected spam at either the connection level or the e-mail level:

- Blocking spam at the connection level

When the SMTP sender is identified as a spam sender based on its IP address, the SMTP connection is rejected and dropped. An error message with a proper error code from the firewall is sent out on behalf of the SMTP server. An example of such an error message is:

554 Transaction failed due to anti spam setting

- Blocking spam at the e-mail level

When a particular e-mail sender is identified as spam sender based on its sender address, the e-mail is rejected and dropped. An error message with a proper error code from the firewall is sent back to the sender on behalf of the server. An example of such an error message is:

550 Requested action not taken: mailbox unavailable

### Tagging Detected Spam

---

The device can allow and tag the e-mail if the message sender is detected as a spammer. This tagging can occur at the connection level so that all the e-mails for the connection in question are tagged. Otherwise, you can tag only an individual e-mail. Two tagging methods are supported:

- Tag the subject: A user-defined string is added at the beginning of the subject of the e-mail.
- Tag the header: A user-defined string is added to the e-mail header.

## CHAPTER 7

# Overview

- [Content Filtering on page 129](#)

## Content Filtering

---

- [Content Filtering Overview on page 129](#)
- [Understanding Content Filtering Protocol Support on page 130](#)

## Content Filtering Overview

### Supported Platforms [SRX Series](#)

Content filtering blocks or permits certain types of traffic based on the MIME type, file extension, and protocol command. The content filter controls file transfers across the gateway by checking traffic against configured filter lists.

The content filter module evaluates traffic before all other UTM modules, except Web Filtering. Therefore, if traffic meets criteria configured in the content-filter, the content-filter acts first upon this traffic.

You can configure the following types of content filters:

- **MIME Pattern Filter** — MIME patterns are used to identify the type of traffic in HTTP and MAIL protocols. There are two lists of MIME patterns that are used by the content filter to determine the action to be taken. The block MIME list contains a list of MIME type traffic that is to be blocked by the content filter. The MIME exception list contains MIME patterns that are not to be blocked by the content filter and are generally subsets of items on the block list. Note that the exception list has a higher priority than the block list. If you have MIME entries that appear on both lists, those MIME types are not blocked by the content filter because the exception list takes priority. Therefore, when adding items to the exception list, it is to your advantage to be specific.
- **Block Extension List** — Because the name of a file is available during file transfers, using file extensions is a highly practical way to block or allow file transfers. The content filter list contains a list of file extensions to be blocked. All protocols support the use of the block extension list.
- **Protocol Command Block and Permit Lists** — Different protocols use different commands to communicate between servers and clients. By blocking or allowing certain commands, traffic can be controlled on the protocol command level.

The block and permit command lists are intended to be used in combination, with the permit list acting as an exception list to the block list.

**NOTE:** If a protocol command appears on both the permit list and the block list, that command is permitted.

Because not all harmful files or components can be controlled by the MIME type or by the file extension, you can also use the content filter module to block ActiveX, Java Applets, and other types of content. The following types of content blocking are supported only for HTTP:

- Block ActiveX
- Block Java applets
- Block cookies
- Block EXE files
- Block ZIP files

#### **Related Documentation**

- [UTM Content Filtering Feature Guide for Security Devices](#)
- [Understanding Content Filtering Protocol Support on page 130](#)
- [Content Filtering Configuration Overview on page 133](#)
- [Monitoring Content Filtering Configurations on page 183](#)

## **Understanding Content Filtering Protocol Support**

### **Supported Platforms**   [SRX Series](#)

Each supported protocol may implement available content filters differently. Not all filtering capabilities are supported for each protocol.

This topic contains the following sections:

- [HTTP Support on page 130](#)
- [FTP Support on page 131](#)
- [E-Mail Support on page 131](#)

### **HTTP Support**

---

The HTTP protocol supports all content filtering features. With HTTP, the content filter remains in the gateway, checking every request and response between the HTTP client and server.

If an HTTP request is dropped due to content filtering, the client receives a response such as:

```
<custom drop message/user-configured drop
message>.<src_port><dst_ip>:<dst_port>Download request was dropped due to
<reason>
```

Therefore, a message may appear as follows:

```
Juniper Networks Firewall Content Filtering blocked request. 5.5.5.1:80->4.4.4.1:55247
Download request was dropped due to file extension block list
```

### FTP Support

The FTP protocol does not support all content filtering features. It supports only the following: Block Extension List and Protocol Command Block List.

When content filtering blocks an FTP request, the following response is sent through the control channel:

```
550 <src_ip>:<src_port>-<dst_ip>:<dst_port><custom drop message/user-configured
drop message> for Content Filtering file extension block list.>
```

Therefore, a message may appear as follows:

```
550 5.5.5.1:21->4.4.4.1:45237 Requested action not taken and the request is dropped for
Content Filtering file extension block list
```

### E-Mail Support

E-mail protocols (SMTP, IMAP, POP3) have limited content filtering support for the following features: Block Extension List, Protocol Command Block List, and MIME Pattern Filtering. Support is limited for e-mail protocols for the following reasons:

- The content filter scans only one level of an e-mail header. Therefore recursive e-mail headers and encrypted attachments are not scanned.
- If an entire e-mail is MIME encoded, the content filter can only scan for the MIME type.
- If any part of an e-mail is blocked due to content filtering, the original e-mail is dropped and replaced by a text file with an explanation for why the e-mail was blocked.

### Content Filtering Configuration Overview

#### Supported Platforms [SRX Series](#)

Content security filter is a new feature that blocks or allows certain type of traffic base on the mime type, file extension, protocol commands and embedded object type. The content filter controls file transfers across the gateway by checking traffic against configured filter lists. The content filtering module evaluates traffic before all other UTM modules, if traffic meets the criteria configured in the content filter, the content filter acts first upon this traffic. The following procedure lists the recommended order in which you should configure content filters:

1. Configure UTM custom objects for the feature. See [“Example: Configuring Content Filtering Custom Objects” on page 134](#).
2. Configure the main feature parameters using feature profiles. See [“Example: Configuring Content Filtering Feature Profiles” on page 137](#).
3. Configure a UTM policy for each protocol and attach this policy to a profile. See [“Example: Configuring Content Filtering UTM Policies” on page 140](#).
4. Attach the UTM policy to a security policy. See [“Example: Attaching Content Filtering UTM Policies to Security Policies” on page 142](#).

- Related Documentation**
- [Unified Threat Management Overview on page 3](#)
  - [UTM Content Filtering Feature Guide for Security Devices](#)

## Specifying Content Filtering Protocols (CLI Procedure)

**Supported Platforms**   [SRX Series](#)

To configure content filtering protocols, use the following CLI configuration statements:

```
content-filtering {
  profile name {
    permit-command cmd-list
    block-command cmd-list
    block-extension file-ext-list
    block-mime {
      list mime-list
      exception ex-mime-list
    }
    block-content-type {
      activex
      java-applet
      exe
      zip
      http-cookie
    }
    notification-options {
      type { message }
      notify-mail-sender
      custom-message msg
    }
  }
}
traceoptions {
  flag {
    all
    basic
    detail
  }
}
```

- Related Documentation**

  - [Example: Configuring Content Filtering UTM Policies on page 140](#)

## Example: Configuring Content Filtering Custom Objects

**Supported Platforms**   [SRX Series](#)

This example shows how to configure content filtering custom objects.

- [Requirements on page 135](#)
- [Overview on page 135](#)
- [Configuration on page 135](#)
- [Verification on page 137](#)

### Requirements

Before you begin:

1. Decide on the type of content filter you require. See [“Content Filtering Overview” on page 129](#).
2. Understand the order in which content filtering parameters are configured. See [“Content Filtering Configuration Overview” on page 133](#).

### Overview

In this example, you define custom objects that are used to create content filtering profiles. You perform the following tasks to define custom objects:

1. Create two protocol command lists called ftpprotocom1 and ftpprotocom2, and add user, pass, port, and type commands to it.
2. Create a filename extension list called extlist2, and add the .zip, .js, and .vbs extensions to it.
3. Define block-mime list call cfmime1 and add patterns to the list.

### Configuration

#### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm custom-objects protocol-command ftpprotocom1 value [user pass port type]
set security utm custom-objects protocol-command ftpprotocom2 value [user pass port type]
set security utm custom-objects filename-extension extlist2 value [zip js vbs]
set security utm custom-objects mime-pattern cfmime1 value [video/quicktime image/x-portable-anymap x-world/x-vrml]
set security utm custom-objects mime-pattern ex-cfmime1 value [video/quicktime-inappropriate]
```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure content filtering custom objects:

1. Create two protocol command lists.

```
[edit security utm]
user@host# set custom-objects protocol-command ftpprotocom1
[edit security utm]
user@host# set custom-objects protocol-command ftpprotocom2
```

2. Add protocol commands to the list.

```
[edit security utm]
user@host# set custom-objects protocol-command ftpprotocom1 value [user pass
port type]
[edit security utm]
user@host# set custom-objects protocol-command ftpprotocom2 value [user pass
port type]
```

3. Create a filename extension list.

```
[edit security utm]
user@host# set custom-objects filename-extension extlist2
```

4. Add extensions to the list.

```
[edit security utm]
user@host# set custom-objects filename-extension extlist2 value [zip js vbs]
```

5. Create antivirus scanning lists.

```
[edit security utm]
user@host# set custom-objects mime-pattern cfmime1
user@host# set custom-objects mime-pattern ex-cfmime1
```

6. Add patterns to the lists.

```
[edit security utm]
user@host# set custom-objects mime-pattern cfmime1 value [video/quicktime
image/x-portable-anymap x-world/x-vrml]
user@host# set custom-objects mime-pattern ex-cfmime1 value
[video/quicktime-inappropriate]
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security utm
custom-objects {
  mime-pattern {
    cfmime1 {
      value [ video/quicktime image/x-portable-anymap x-world/x-vrml ];
    }
    ex-cfmime1 {
      value video/quicktime-inappropriate;
```

```

    }
  }
  filename-extension {
    extlist2 {
      value [ zip js vbs ];
    }
  }
  protocol-command {
    ftpprotocom1 {
      value [ user pass port type ];
    }
  }
  protocol-command {
    ftpprotocom2 {
      value [ user pass port type ];
    }
  }
}

```

If you are done configuring the device, enter **commit** from configuration mode.

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying Content Filtering Custom Objects on page 137](#)

#### *Verifying Content Filtering Custom Objects*

**Purpose** Verify the content filtering custom objects.

**Action** From operational mode, enter the **show configuration security utm** command.

- Related Documentation**
- [Unified Threat Management Overview on page 3](#)
  - [UTM Content Filtering Feature Guide for Security Devices](#)
  - [Content Filtering Overview on page 129](#)
  - [Content Filtering Configuration Overview on page 133](#)
  - [Example: Configuring Content Filtering Feature Profiles on page 137](#)
  - [Example: Configuring Content Filtering UTM Policies on page 140](#)
  - [Example: Attaching Content Filtering UTM Policies to Security Policies on page 142](#)

## Example: Configuring Content Filtering Feature Profiles

**Supported Platforms** SRX Series

This example describes how to configure the content filtering feature profiles.

- [Requirements on page 138](#)
- [Overview on page 138](#)

- [Configuration on page 138](#)
- [Verification on page 140](#)

## Requirements

Before you begin:

1. Decide on the type of content filter you require. See [“Content Filtering Overview” on page 129](#).
2. Create custom objects. See [“Content Filtering Configuration Overview” on page 133](#).

## Overview

In this example, you configure a feature profile called `confilter1` and specify the following custom objects to be used for filtering content:

1. Apply the `ftpprotocom1` protocol command list custom object to `confilter1`.
2. Apply blocks to Java applets, executable files, and HTTP cookies.
3. Apply the extension list `extlist2` custom object to `confilter1` for blocking extensions.
4. Apply the MIME pattern list custom objects `cfmime1` and `ex-cfmime1` to the `confilter1` for blocking MIME types.
5. Apply the protocol permit command custom object `ftpprotocom2` to `confilter1`. (The permit protocol command list acts as an exception list for the block protocol command list.)

**NOTE:** Protocol command lists, both permit and block, are created by using the same custom object.

6. Configure a custom message to send a notification.

## Configuration

### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile content-filtering profile confilter1
set security utm feature-profile content-filtering profile confilter1 block-command
  ftpprotocom1
set security utm feature-profile content-filtering profile confilter1 block-content-type
  java-applet exe http-cookie
set security utm feature-profile content-filtering profile confilter1 block-extension extlist2
set security utm feature-profile content-filtering profile confilter1 block-mime list cfmime1
  exception ex-cfmime1
set security utm feature-profile content-filtering profile confilter1 permit-command
  ftpprotocom2
```

```
set security utm feature-profile content-filtering profile confilter1 notification-options
custom-message "the action is not taken" notify-mail-sender type message
```

**Step-by-Step****Procedure**

The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure a content filtering feature profiles:

1. Create a content filtering profile.

```
[edit security utm]
user@host# set feature-profile content-filtering profile confilter1
```

2. Apply a protocol command list custom object to the profile.

```
[edit security utm]
user@host# set feature-profile content-filtering profile confilter1 block-command
ftpprotocol1
```

3. Apply blocks to available content.

```
[edit security utm]
user@host# set feature-profile content-filtering profile confilter1 block-content-type
java-applet exe http-cookie
```

4. Apply an extension list custom object to the profile.

```
[edit security utm]
user@host# set feature-profile content-filtering profile confilter1 block-extension
extlist2
```

5. Apply pattern list custom objects to the profile.

```
[edit security utm]
user@host# set feature-profile content-filtering profile confilter1 block-mime list
cfmime1 exception ex-cfmime1
```

6. Apply the protocol permit command custom object to the profile.

```
[edit security utm]
user@host# set feature-profile content-filtering profile confilter1 permit-command
ftpprotocol2
```

7. Configure the notification options.

```
[edit security utm]
user@host# set feature-profile content-filtering profile confilter1m
notification-options custom-message "the action is not taken" notify-mail-sender
type message
```

**Results**

From configuration mode, confirm your configuration by entering the **show security utm** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
user@host# show security utm
feature-profile {
  content-filtering {
    profile contentfilter1;
```

```
profile confilter1 {
  permit-command ftpprotocom2;
  block-command ftpprotocom1;
  block-extension extlist2;
  block-mime {
    list cfmime1;
    exception ex-cfmime1;
  }
  block-content-type {
    java-applet;
    exe;
    http-cookie;
  }
  notification-options {
    type message;
    notify-mail-sender;
    custom-message " the action is not taken";
  }
}
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying the Configuration of Content Filtering Feature Profile on page 140](#)

#### ***Verifying the Configuration of Content Filtering Feature Profile***

**Purpose** Verify the content filtering feature profile.

**Action** From operational mode, enter the **show configuration security utm** command.

- Related Documentation**

  - [UTM Content Filtering Feature Guide for Security Devices](#)
  - [Content Filtering Overview on page 129](#)
  - [Content Filtering Configuration Overview on page 133](#)
  - [Example: Configuring Content Filtering Custom Objects on page 134](#)
  - [Example: Configuring Content Filtering UTM Policies on page 140](#)
  - [Example: Attaching Content Filtering UTM Policies to Security Policies on page 142](#)

## Example: Configuring Content Filtering UTM Policies

**Supported Platforms** [SRX Series](#)

This example describes how to create a content filtering UTM policy to attach to your feature profile.

- [Requirements on page 141](#)
- [Overview on page 141](#)
- [Configuration on page 141](#)
- [Verification on page 142](#)

## Requirements

Before you begin:

1. Decide on the type of content filter you require. See [“Content Filtering Overview” on page 129](#).
2. Configure UTM custom objects for each feature and define the content-filtering profile. See [“Content Filtering Configuration Overview” on page 133](#).

## Overview

You configure UTM policies to selectively enforce various UTM solutions on network traffic passing through a UTM-enabled device. Through feature profiles you associate custom objects to these policies and specify blocking or permitting certain types of traffic.

In this example, you configure a UTM policy called `utmp4`, and then assign the preconfigured feature profile `confilter1` to this policy.

## Configuration

### Step-by-Step Procedure

To configure a content filtering UTM policy:

You can configure different protocol applications in the UTM policy. The example only shows HTTP and not other protocols. Earlier you configured custom objects for FTP (`ftpprotocolm1` and `ftpprotocolm2`). Next you should add a content filter policy for FTP, for example:

```
set security utm utm-policy utmp4 content-filtering ftp upload-profile confilter1
```

```
set security utm utm-policy utmp4 content-filtering ftp download-profile confilter1
```

1. Create a UTM policy.  

```
[edit security utm]
user@host# set utm-policy utmp4
```
2. Attach the UTM policy to the profile.  

```
[edit security utm]
user@host# set utm-policy utmp4 content-filtering http-profile contentfilter1
```
3. If you are done configuring the device, commit the configuration.  

```
[edit]
user@host# commit
```

### Verification

---

To verify the configuration is working properly, enter the **show security utm** command.

## Example: Attaching Content Filtering UTM Policies to Security Policies

#### Supported Platforms [SRX Series](#)

This example shows how to create a security policy and attach the UTM policy to the security policy.

- [Requirements on page 142](#)
- [Overview on page 142](#)
- [Configuration on page 142](#)
- [Verification on page 144](#)

### Requirements

---

Before you begin:

1. Configure UTM custom objects, define the content filtering profile, and create a UTM policy. See [“Content Filtering Configuration Overview” on page 133](#).
2. Enable and configure a security policy. See *Example: Configuring a Security Policy to Permit or Deny All Traffic*.

### Overview

---

By attaching content filtering UTM policies to security policies, you can filter traffic transiting from one security zone to another.

In this example, you create a security policy called p4 and specify that traffic from any source address to any destination address with an HTTP application matches the criteria. You then assign a UTM policy called utmp4 to the security policy p4. This UTM policy applies to any traffic that matches the criteria specified in the security policy p4.

### Configuration

---

#### CLI Quick Configuration

To quickly attach a content filtering UTM policy to a security policy, copy the following commands and paste them into the CLI.

```
[edit]
set security policies from-zone trust to-zone untrust policy p4 match source-address any
set security policies from-zone trust to-zone untrust policy p4 match destination-address
  any
set security policies from-zone trust to-zone untrust policy p4 match application
  junos-http
set security from-zone trust to-zone untrust policy p4 then permit application-services
  utm-policy utmp4
```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To attach a UTM policy to a security policy:

1. Create a security policy.

```
[edit]
user@host# edit security policies from-zone trust to-zone untrust policy p4
```

2. Specify the match conditions for the policy.

```
[edit security policies from-zone trust to-zone untrust policy p4]
user@host# set match source-address any
user@host# set match destination-address any
user@host# set match application junos-http
```

3. Attach the UTM policy to the security policy.

```
[edit security policies from-zone trust to-zone untrust policy p4]
user@host# set then permit application-services utm-policy utmp4
```

**Results** From configuration mode, confirm your configuration by entering the **show security policies** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
user@host# show security policies
from-zone trust to-zone untrust {
  policy p4 {
    match {
      source-address any;
      destination-address any;
      application junos-http;
    }
    then {
      permit {
        application-services {
          utm-policy utmp4;
        }
      }
    }
  }
}
default-policy {
  permit-all;
```

```
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

To confirm that the configuration is working properly, perform this task:

## Security Configuration Statement Hierarchy

### Supported Platforms [LN Series, SRX Series](#)

Use the statements in the **security** configuration hierarchy to configure actions, certificates, dynamic virtual private networks (VPNs), firewall authentication, flow, forwarding options, group VPNs, Intrusion Detection Prevention (IDP), Internet Key Exchange (IKE), Internet Protocol Security (IPsec), logging, Network Address Translation (NAT), public key infrastructure (PKI), policies, resource manager, rules, screens, secure shell known hosts, trace options, user identification, Unified Threat Management (UTM), and zones. Statements that are exclusive to the SRX Series devices running Junos OS are described in this section.

Each of the following topics lists the statements at a sub-hierarchy of the **[edit security]** hierarchy.

- [\[edit security address-book\] Hierarchy Level](#)
- [\[edit security alarms\] Hierarchy Level](#)
- [\[edit security alg\] Hierarchy Level](#)
- [\[edit security analysis\] Hierarchy Level](#)

## custom-objects

**Supported Platforms** [SRX Series](#)

**Syntax**

```
custom-objects {
  custom-url-category object-name {
    value [value];
  }
  filename-extension object-name {
    value [value];
  }
  mime-pattern object-name {
    value [value];
  }
  protocol-command object-name {
    value [value];
  }
  url-pattern object-name {
    value [value];
  }
}
```

**Hierarchy Level** [edit security utm]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Configure custom objects before configuring UTM feature-profile features.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommended having a custom category name be the same as the predefined category name.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level**

security—To view this statement in the configuration.
security-control—To add this statement to the configuration.

## custom-message (Security Content Filtering)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	custom-message <i>message</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> notification-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Custom message notifications are generally used when content is blocked by the content filter.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## content-filtering (Security Feature Profile)

**Supported Platforms** [SRX Series](#)

**Syntax**

```
content-filtering {
  profile profile-name {
    block-command protocol-command-list;
    block-content-type (activex | exe | http-cookie | java-applet | zip);
    block-extension extension-list;
    block-mime {
      exception list-name;
      list list-name;
    }
    notification-options {
      custom-message message;
      (notify-mail-sender | no-notify-mail-sender);
      type (message | protocol-only);
    }
    permit-command protocol-command-list;
  }
  traceoptions flag flag;
}
```

**Hierarchy Level** [edit security utm feature-profile]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure UTM content-filtering features.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level**  
 security—To view this statement in the configuration.  
 security-control—To add this statement to the configuration.

## download-profile (Security Content Filtering FTP)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	download-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> content-filtering ftp]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the content-filtering FTP (download) protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## exception (Security Content Filtering)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	exception <i>list-name</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> block-mime]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure the content filter to use an exception list to the MIME block list (custom objects).
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

<b>Hierarchy Level</b>	[edit security utm]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure UTM features, antivirus, antispam, content-filtering, and web-filtering by creating feature profiles.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .

<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## filename-extension

<b>Supported Platforms</b>	SRX Series
<b>Syntax</b>	filename-extension <i>object-name</i> { value [ <i>value</i> ]; }
<b>Hierarchy Level</b>	[edit security utm custom-objects]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	When scanning content, you can use a file extension list to define a set of file extensions that are used in file extension scan mode (scan-by-extension).
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b><i>object-name</i></b>—Name of the extension-list object.</li> <li>• <b><i>value value</i></b>—Value of the extension-list object. You can configure multiple values separated by spaces and enclosed in square brackets.</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Understanding UTM Custom Objects on page 5</a></li> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## ftp (UTM Policy Content Filtering)

---

**Supported Platforms** [SRX Series](#)

**Syntax**

```
ftp {  
    download-profile profile-name;  
    upload-profile profile-name;  
}
```

**Hierarchy Level** [edit security utm utm-policy *policy-name* content-filtering]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure a UTM policy for the content-filtering FTP protocol and attach this policy to a security profile to implement it.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Content Filtering Feature Guide for Security Devices*

## http-profile (Security Content Filtering)

---

**Supported Platforms** [SRX Series](#)

**Syntax**

```
http-profile profile-name;
```

**Hierarchy Level** [edit security utm utm-policy *policy-name* content-filtering]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure a UTM policy for the content-filtering HTTP protocol and attach this policy to a security profile to implement it.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Content Filtering Feature Guide for Security Devices*

## imap-profile (Security UTM Policy Content Filtering)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	imap-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> content-filtering]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the content-filtering IMAP protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li> </ul>

## list (Security Content Filtering Block Mime)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	list <i>list-name</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> block-mime]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure the content filter to use MIME block lists (custom objects).
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li> </ul>

## mime-pattern

---

Supported Platforms	<a href="#">SRX Series</a>
Syntax	<pre>mime-pattern <i>object-name</i> {     value [<i>value</i>]; }</pre>
Hierarchy Level	[edit security utm custom-objects]
Release Information	Statement introduced in Junos OS Release 9.5.
Description	The gateway device uses MIME (Multipurpose Internet Mail Extension) types to decide which traffic is allowed to bypass various types of scanning.
Options	<ul style="list-style-type: none"><li>• <b><i>object-name</i></b>—Name of the MIME object.</li><li>• <b><i>value value</i></b>—Value of the MIME object. You can configure multiple values separated by spaces and enclosed in square brackets.</li></ul>
Required Privilege Level	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## no-notify-mail-sender (Security Content Filtering Notification Options)

---

Supported Platforms	<a href="#">SRX Series</a>
Syntax	<pre>no-notify-mail-sender;</pre>
Hierarchy Level	[edit security utm feature-profile content-filtering profile <i>profile-name</i> notification-options]
Release Information	Statement introduced in Release 9.5 of Junos OS.
Description	Do not notify the e-mail sender.
Required Privilege Level	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## notification-options (Security Content Filtering)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	<pre>notification-options {   custom-message <i>message</i>;   (notify-mail-sender   no-notify-mail-sender);   type (message   protocol-only); }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	You can configure a message notification to trigger when a content filter is matched.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li> </ul>

## notify-mail-sender (Security Content Filtering Notification Options)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	notify-mail-sender;
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> notification-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Notify the e-mail sender.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li> </ul>

## over-limit

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	over-limit (block   log-and-permit);
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> traffic-options sessions-per-client]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	In an attempt to consume all available resources and hinder the ability of the device, a malicious user might generate a large amount of traffic all at once. To prevent such activity from succeeding, you can impose a session throttle to limit sessions and configure an action to occur when the limit is exceeded.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>block</b>—Log the error and deny the traffic</li><li>• <b>log-and-permit</b>—Log the error and permit the traffic</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## packet-filter

Supported Platforms	LN Series, SRX1400, SRX3400, SRX3600, SRX5400, SRX5600, SRX5800
Syntax	<pre>packet-filter <i>packet-filter-name</i> {   action-profile (<i>profile-name</i>   default);   destination-port (<i>port-range</i>   <i>protocol-name</i>);   destination-prefix <i>destination-prefix</i>;   interface <i>logical-interface-name</i>;   protocol (<i>protocol-number</i>   <i>protocol-name</i>);   source-port (<i>port-range</i>   <i>protocol-name</i>);   source-prefix <i>source-prefix</i>; }</pre>
Hierarchy Level	[edit security datapath-debug]
Release Information	Command introduced in Junos OS Release 9.6 ; Support for IPv6 addresses for the <b>destination-prefix</b> and <b>source-prefix</b> options added in Junos OS Release 10.4. Support for IPv6 filter for the <b>interface</b> option added in Junos OS Release 10.4.
Description	Set packet filter for taking the datapath-debug action. A maximum of four filters are supported at the same time.
Options	<ul style="list-style-type: none"> <li><b>action-profile</b> (<i>profile-name</i>   <b>default</b>)— Identify the action profile to use. You can specify the name of the action profile to use or select default action profile.</li> <li><b>destination-port</b> (<i>port-range</i>   <i>protocol name</i>)— Specify a destination port to match TCP/UDP destination port.</li> <li><b>destination-prefix</b> <i>destination-prefix</i>— Specify a destination IPv4/IPv6 address prefix.</li> <li><b>interface</b> <i>logical-interface-name</i>— Specify a logical interface name.</li> <li><b>protocol</b> (<i>protocol-number</i>   <i>protocol-name</i>)— Match IP protocol type.</li> <li><b>source-port</b> (<i>port-range</i>   <i>protocol-name</i>)— Match TCP/UDP source port.</li> <li><b>source-prefix</b> <i>source-prefix</i>— Specify a source IP address prefix.</li> </ul>
Required Privilege Level	security—To view this statement in the configuration security-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"> <li>[edit security flow] Hierarchy Level</li> <li>Flow-Based Processing Feature Guide for Security Devices</li> </ul>

## permit-command

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	permit-command <i>protocol-command-list</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Apply protocol permit command custom-objects to the content-filtering profile.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## pop3-profile (Security UTM Policy Content Filtering)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	pop3-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> content-filtering]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the content filtering POP3 protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## profile (Security Content Filtering)

**Supported Platforms** [SRX Series](#)

**Syntax**

```
profile profile-name {
    block-command protocol-command-list;
    block-content-type (activex | exe | http-cookie | java-applet | zip);
    block-extension extension-list;
    block-mime {
        exception list-name;
        list list-name;
    }
    notification-options {
        custom-message message;
        (notify-mail-sender | no-notify-mail-sender);
        type (message | protocol-only);
    }
    permit-command protocol-command-list;
}
```

**Hierarchy Level** [edit security utm feature-profile content-filtering]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Create a profile for the content-filtering feature. This profile includes all subsequent configuration options.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level**

security—To view this statement in the configuration.
security-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Content Filtering Feature Guide for Security Devices*

## protocol-command

---

**Supported Platforms** [SRX Series](#)

**Syntax** `protocol-command object-name {  
value [value];  
}`

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Different protocols use different commands to communicate between servers and clients. By blocking or allowing certain commands, traffic can be controlled on the protocol command level.

- Options**
- ***object-name***—Name of the command-list object.
  - ***value value***—Value of the command-list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

- Related Documentation**
- [Junos OS UTM Library for Security Devices](#)
  - [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
  - [Understanding UTM Custom Objects on page 5](#)

## sessions-per-client

### Supported Platforms

**Syntax** `sessions-per-client {  
    limit value;  
    over-limit (block | log-and-permit);  
}`

**Hierarchy Level** [edit security utm utm-policy *policy-name* traffic-options]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** In an attempt to consume all available resources and hinder the ability of the device, a malicious user might generate a large amount of traffic all at once. To prevent such activity from succeeding, you can impose a session throttle.

**NOTE:** The `sessions-per-client limit` command supports the antispam, content filtering, and antivirus UTM features. It does not support Web filtering.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Overview Feature Guide for Security Devices*

## smtp-profile (Security UTM Policy Content Filtering)

**Supported Platforms** [SRX Series](#)

**Syntax** `smtp-profile profile-name;`

**Hierarchy Level** [edit security utm utm-policy *policy-name* content-filtering]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure a UTM policy for the content-filtering SMTP protocol and attach this policy to a security profile to implement it.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Content Filtering Feature Guide for Security Devices*

## traceoptions (Security Content Filtering)

---

Supported Platforms	<a href="#">SRX Series</a>
Syntax	traceoptions flag <i>flag</i> ;
Hierarchy Level	[edit security utm feature-profile content-filtering]
Release Information	Statement introduced in Release 9.5 of Junos OS.
Description	Define tracing options for content filtering features.
Options	<ul style="list-style-type: none"><li>• <b>flag</b>:<ul style="list-style-type: none"><li>• <b>all</b>—Enable all content filtering trace flags.</li><li>• <b>basic</b> —Trace content filtering basic information.</li><li>• <b>detail</b>—Trace content filtering detailed information.</li></ul></li></ul>
Required Privilege Level	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## type (Security Content Filtering Notification Options)

---

Supported Platforms	<a href="#">SRX Series</a>
Syntax	type (message   protocol-only);
Hierarchy Level	[edit security utm feature-profile content-filtering profile <i>profile-name</i> notification-options]
Release Information	Statement introduced in Junos OS Release 9.5.
Description	When content is blocked, the client generally still receives a successful response code but with modified content (file replacement) containing a warning message. But with protocol-only notifications, a protocol-specific error code might be returned to the client.
Options	<ul style="list-style-type: none"><li>• <b>message</b>—Send a generic notification.</li><li>• <b>protocol-only</b>—Send a protocol-specific notification.</li></ul>
Required Privilege Level	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

---

## upload-profile (Security Content Filtering FTP)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	upload-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> content-filtering ftp]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the content-filtering FTP (upload) protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li></ul>

## CHAPTER 9

# Administration

- [Monitoring Content Filtering on page 183](#)
- [Operational Commands on page 184](#)

## Monitoring Content Filtering

---

- [Monitoring Content Filtering Configurations on page 183](#)

## Monitoring Content Filtering Configurations

**Supported Platforms** [LN Series](#), [SRX Series](#)

**Purpose** View content filtering statistics.

**Action** To view content filtering statistics in the CLI, enter the **user@host > show security utm content-filtering statistics** command.

The content filtering **show statistics** command displays the following information:

```
Base on command list: # Blocked
Base on mime list: # Blocked
Base on extension list: # Blocked
ActiveX plugin: # Blocked
Java applet: # Blocked
EXE files: # Blocked
ZIP files: # Blocked
HTTP cookie: # Blocked
```

To view content filtering statistics using J-Web:

1. Select **Clear Content filtering statistics** **Monitor>Security>UTM>Content Filtering** **Monitor>Security>UTM>Content Filtering**.

The following statistics become viewable in the right pane.

```
Base on command list: # Passed # Blocked
Base on mime list: # Passed # Blocked
Base on extension list: # Passed # Blocked
ActiveX plugin: # Passed # Blocked
Java applet: # Passed # Blocked
EXE files: # Passed # Blocked
ZIP files: # Passed # Blocked
HTTP cookie: # Passed # Blocked
```

2. You can click **Clear Content filtering statistics** to clear all current viewable statistics and begin collecting new statistics.

---

## clear security utm content-filtering statistics

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	clear security utm content-filtering statistics
<b>Release Information</b>	Command introduced in Junos OS Release 9.5. Support for UTM in chassis cluster added in Junos OS Release 11.4.
<b>Description</b>	Clear content-filtering statistics information. With chassis cluster support for UTM, statistics from both the nodes are cleared.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show security utm content-filtering statistics on page 186</a></li></ul>
<b>Output Fields</b>	This command produces no output.

### Sample Output

#### clear security utm content-filtering statistics

```
user@host> clear security utm content-filtering statistics
```

## show security utm content-filtering statistics

---

**Supported Platforms** [SRX Series](#)

**Syntax** show security utm content-filtering statistics

**Release Information** Command introduced in Junos OS Release 9.5.  
Support for UTM in chassis cluster added in Junos OS Release 11.4.

**Description** Display content-filtering statistics for connections including lists of blocked files and the reasons for blocking. Statistics from both the nodes (with full chassis cluster support for UTM) are displayed.

**Required Privilege Level** view

**Related Documentation**

- [clear security utm content-filtering statistics on page 185](#)

**Output Fields** show security utm content-filtering statistics  
  
Output fields are listed in the approximate order in which they appear.

## show security utm content-filtering statistics

```
user@host> show security utm content-filtering statistics
Content-filtering-statistic:      Blocked
Base on command list:           0
Base on mime list:               0
Base on extension list:         0
ActiveX plugin:                 0
Java applet:                    0
EXE files:                      0
ZIP files:                      0
HTTP cookie:                    0
```

## show security policies

**Supported Platforms** [LN Series, SRX Series](#)

**Syntax** show security policies  
 <detail>  
 <none>  
 policy-name *policy-name*  
 <detail>  
 <global>

**Release Information** Command modified in Junos OS Release 9.2. Support for IPv6 addresses added in Junos OS Release 10.2. Support for IPv6 addresses in active/active chassis cluster configurations in addition to the existing support of active/passive chassis cluster configurations added in Junos OS Release 10.4. Support for wildcard addresses added in Junos OS Release 11.1. Support for global policy added in Junos OS Release 11.4. Support for services offloading added in Junos OS Release 11.4. Support for source-identities added in Junos OS Release 12.1. The **Description** output field added in Junos OS Release 12.1. Support for negated address added in Junos OS Release 12.1X45-D10. The output fields for Policy Statistics expanded, and the output fields for the **global** and **policy-name** options expanded to include from-zone and to-zone global match criteria in Junos OS Release 12.1X47-D10.

**Description** Display a summary of all security policies configured on the device. If a particular policy is specified, display information particular to that policy.

- Options**
- **none**—Display basic information about all configured policies.
  - **detail**—(Optional) Display a detailed view of all of the policies configured on the device.
  - **policy-name *policy-name***—(Optional) Display information about the specified policy.
  - **global**—Display information about global policies.

**Required Privilege Level** view

[show security policies policy-name p1 detail on page 191](#)  
[show security policies \(services-offload\) on page 192](#)  
[show security policies detail on page 192](#)

[show security policies policy-name p1 \(Negated Address\) on page 193](#)  
[show security policies policy-name p1 detail \(Negated Address\) on page 193](#)  
[show security policies global on page 194](#)

**Output Fields** Table 7 on page 188 lists the output fields for the **show security policies** command. Output fields are listed in the approximate order in which they appear.

**Table 7: show security policies Output Fields**

Field Name	Field Description
<b>From zone</b>	Name of the source zone.
<b>To zone</b>	Name of the destination zone.
<b>Policy</b>	Name of the applicable policy.
<b>Description</b>	Description of the applicable policy.
<b>State</b>	Status of the policy: <ul style="list-style-type: none"> <li>• <b>enabled:</b> The policy can be used in the policy lookup process, which determines access rights for a packet and the action taken in regard to it.</li> <li>• <b>disabled:</b> The policy cannot be used in the policy lookup process, and therefore it is not available for access control.</li> </ul>
<b>Index</b>	Internal number associated with the policy.
<b>Sequence number</b>	Number of the policy within a given context. For example, three policies that are applicable in a from-zoneA-to-zoneB context might be ordered with sequence numbers 1, 2, 3. Also, in a from-zoneC-to-zoneD context, four policies might have sequence numbers 1, 2, 3, 4.
<b>Source addresses</b>	For standard display mode, the names of the source addresses for a policy. Address sets are resolved to their individual names.  For detail display mode, the names and corresponding IP addresses of the source addresses for a policy. Address sets are resolved to their individual address name-IP address pairs.
<b>Destination addresses</b>	Name of the destination address (or address set) as it was entered in the destination zone's address book. A packet's destination address must match this value for the policy to apply to it.
<b>Source addresses (excluded)</b>	Name of the source address excluded from the policy.
<b>Destination addresses (excluded)</b>	Name of the destination address excluded from the policy.
<b>Source identities</b>	One or more user roles specified for a policy.

Table 7: show security policies Output Fields (*continued*)

Field Name	Field Description
Applications	<p>Name of a preconfigured or custom application whose type the packet matches, as specified at configuration time.</p> <ul style="list-style-type: none"> <li>• <b>IP protocol</b>: The Internet protocol used by the application—for example, TCP, UDP, ICMP.</li> <li>• <b>ALG</b>: If an ALG is explicitly associated with the policy, the name of the ALG is displayed. If <b>application-protocol ignore</b> is configured, ignore is displayed. Otherwise, 0 is displayed. However, even if this command shows ALG: 0, ALGs might be triggered for packets destined to well-known ports on which ALGs are listening, unless ALGs are explicitly disabled or when <b>application-protocol ignore</b> is not configured for custom applications.</li> <li>• <b>Inactivity timeout</b>: Elapsed time without activity after which the application is terminated.</li> <li>• <b>Source port range</b>: The low-high source port range for the session application.</li> </ul>
Destination Address Translation	<p>Status of the destination address translation traffic:</p> <ul style="list-style-type: none"> <li>• <b>drop translated</b>—Drop the packets with translated destination addresses.</li> <li>• <b>drop untranslated</b>—Drop the packets without translated destination addresses.</li> </ul>
Application Firewall	<p>An application firewall includes the following:</p> <ul style="list-style-type: none"> <li>• <b>Rule-set</b>—Name of the rule set.</li> <li>• <b>Rule</b>—Name of the rule. <ul style="list-style-type: none"> <li>• <b>Dynamic applications</b>—Name of the applications.</li> <li>• <b>Dynamic application groups</b>—Name of the application groups.</li> <li>• <b>Action</b>—The action taken with respect to a packet that matches the application firewall rule set. Actions include the following: <ul style="list-style-type: none"> <li>• <b>permit</b></li> <li>• <b>deny</b></li> </ul> </li> </ul> </li> <li>• <b>Default rule</b>—The default rule applied when the identified application is not specified in any rules of the rule set.</li> </ul>
Action or Action-type	<ul style="list-style-type: none"> <li>• The action taken in regard to a packet that matches the policy's tuples. Actions include the following: <ul style="list-style-type: none"> <li>• <b>permit</b></li> <li>• <b>firewall-authentication</b></li> <li>• <b>tunnel ipsec-vpn <i>vpn-name</i></b></li> <li>• <b>pair-policy <i>pair-policy-name</i></b></li> <li>• <b>source-nat pool <i>pool-name</i></b></li> <li>• <b>pool-set <i>pool-set-name</i></b></li> <li>• <b>interface</b></li> <li>• <b>destination-nat <i>name</i></b></li> <li>• <b>deny</b></li> <li>• <b>reject</b></li> <li>• <b>services-offload</b></li> </ul> </li> </ul>
Session log	<p>Session log entry that indicates whether the <b>at-create</b> and <b>at-close</b> flags were set at configuration time to log session information.</p>

Table 7: show security policies Output Fields (*continued*)

Field Name	Field Description
<b>Scheduler name</b>	Name of a preconfigured scheduler whose schedule determines when the policy is active and can be used as a possible match for traffic.
<b>Policy statistics</b>	<ul style="list-style-type: none"> <li>• <b>Input bytes</b>—The total number of bytes presented for processing by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of bytes presented for processing by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of bytes presented for processing by the device from the reply direction.</li> </ul> </li> <li>• <b>Output bytes</b>—The total number of bytes actually processed by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of bytes from the initial direction actually processed by the device.</li> <li>• <b>Reply direction</b>—The number of bytes from the reply direction actually processed by the device.</li> </ul> </li> <li>• <b>Input packets</b>—The total number of packets presented for processing by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of packets presented for processing by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of packets presented for processing by the device from the reply direction.</li> </ul> </li> <li>• <b>Output packets</b>—The total number of packets actually processed by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of packets actually processed by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of packets actually processed by the device from the reply direction.</li> </ul> </li> <li>• <b>Session rate</b>—The total number of active and deleted sessions.</li> <li>• <b>Active sessions</b>—The number of sessions currently present because of access control lookups that used this policy.</li> <li>• <b>Session deletions</b>—The number of sessions deleted since system startup.</li> <li>• <b>Policy lookups</b>—The number of times the policy was accessed to check for a match.</li> </ul> <p><b>NOTE:</b> Configure the Policy P1 with the <b>count</b> option to display policy statistics.</p>

## Sample Output

### show security policies

```

user@host> show security policies
From zone: trust, To zone: untrust
Policy: p1, State: enabled, Index: 4, Sequence number: 1
Source addresses:

## PART 4

# UTM Express Antivirus Protection Feature Guide for Security Devices

- [Overview on page 197](#)
- [Configuration on page 201](#)
- [Administration on page 303](#)

## CHAPTER 10

# Overview

- [Express Antivirus Protection on page 197](#)

### Express Antivirus Protection

---

- [Express Antivirus Protection Overview on page 197](#)
- [Understanding Express Antivirus Scanner Pattern Updates on page 199](#)

### Express Antivirus Protection Overview

**Supported Platforms**   [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

Express antivirus scanning is offered as a less CPU intensive alternative to the full file-based antivirus feature. Express antivirus supports the same protocols as full antivirus and functions in much the same manner, however, it has a smaller memory footprint, compatible with the smaller system memory present on lower end devices.

**NOTE:** If you switch from express antivirus protection to full file-based antivirus protection, you must reboot the device in order for full file-based antivirus to begin working.

This topic includes the following sections:

- [Express Antivirus Packet-Based Scanning Versus File-Based Scanning on page 197](#)
- [Express Antivirus Expanded MIME Decoding Support on page 198](#)
- [Express Antivirus Scan Result Handling on page 198](#)
- [Express Antivirus Intelligent Prescreening on page 198](#)
- [Express Antivirus Limitations on page 198](#)

### Express Antivirus Packet-Based Scanning Versus File-Based Scanning

---

Express antivirus uses a different antivirus scan engine than the full file-based antivirus feature and a different back-end hardware engine to accelerate pattern matching for higher data throughput.

The packet based scanning done by express antivirus provides virus scanning data buffers without waiting for entire file to be received by the firewall, whereas the file-based scanning done by full antivirus can only start virus scanning when entire file is received.

### Express Antivirus Expanded MIME Decoding Support

---

Express antivirus offers MIME decoding support for HTTP, POP3, SMTP, and IMAP. MIME decoding support includes the following for each supported protocol:

- Multi-part and nested header decoding
- Base64 decoding, printed quote decoding, and encoded word decoding (in the subject field)

### Express Antivirus Scan Result Handling

---

With express antivirus, the TCP traffic is closed gracefully when a virus is found and the data content is dropped.

**NOTE:** Express antivirus supports the following fail mode options: default, engine-not-ready, out-of-resource, and too-many-requests. Fail mode handling of supported options with express antivirus is much the same as with full antivirus.

---

### Express Antivirus Intelligent Prescreening

---

Intelligent prescreening functionality is identical in both express antivirus and full antivirus.

### Express Antivirus Limitations

---

Express antivirus has the following limitations when compared to full antivirus functionality:

- Express antivirus provides limited support for the scanning of file archives and compressed file formats. Express antivirus can only support gzip, deflate and compressed compressing formats.
- Express antivirus provides limited support for decompression. Decompression is only supported with HTTP (supports only gzip, deflate, and compress for HTTP and only supports one layer of compression) and POP3 (supports only gzip for POP3 and only supports one layer of compression).
- Express antivirus does not support scanning by extension.
- Express antivirus scanning is interrupted when the scanning database is loading.
- Express antivirus may truncate a warning message if a virus has been detected and the replacement warning message that is sent is longer than the original content it is replacing.

**NOTE:** Because express antivirus does only packet based string matching, if you use the standard EICAR file to test express antivirus, you will see false positives. To avoid these false positives, Juniper has disabled scanning on the standard EICAR file to create a modified EICAR file for testing express antivirus. You can download this modified EICAR file from the following links:

<http://www.juniper.net/security/avtest/ss-eicar.txt>

<http://www.juniper.net/security/avtest/ss-eicar.com>

<http://www.juniper.net/security/avtest/ss-eicar.zip>

#### Related Documentation

- [Understanding Express Antivirus Scanner Pattern Updates on page 199](#)
- [Express Antivirus Configuration Overview on page 201](#)
- [Example: Automatically Updating Express Antivirus Patterns on page 219](#)

## Understanding Express Antivirus Scanner Pattern Updates

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX650

Express antivirus uses a different signature database than the full antivirus signature database. The express antivirus signature database is called Juniper Express antivirus database and it is compatible with the hardware engine. The express signature database targets only critical viruses and malware, including worms, Trojans, and spyware. This is a smaller sized database, providing less coverage than the full antivirus signature database.

The express antivirus pattern database is updated over HTTP or HTTPS and can occur automatically or manually. This is similar functionality to that found in full antivirus with some minor differences:

- With express antivirus, the signature database auto-update interval, is once a day.
- With express antivirus, there is no support for the downloading of multiple database types.
- With express antivirus, during database loading, all scan operations are interrupted. Scan operations for existing traffic flows are stopped and no new scan operations are initiated for newly established traffic flows. You can specify the desired action for this interruption period using the fall-back parameter for engine-busy-loading-database. The available actions are block or log-and-permit.
- By default, the URL for express antivirus is <http://update.juniper-updates.net/EAV/SRX210>. "SRX210" in the URL is the platform name. This part of the URL is different and platform specific for each platform. (Other than the platform name, you should not change this URL unless you are experiencing problems with it and have called for support.)

.....

**NOTE:** Once your subscription expires, you have a 30 day grace period during which you can continue to update the antivirus pattern file. Once that grace period expires, the update server no longer permits antivirus pattern file updates.

The express Antivirus scanning feature is a separately licensed subscription service. When your antivirus license key expires, you can continue to use locally stored antivirus signatures. But in that case, if the local database is deleted, antivirus scanning is disabled.

.....

- [Example: Configuring Express Antivirus Custom Objects on page 202](#)
- [Example: Configuring Express Antivirus Feature Profiles on page 205](#)
- [Example: Configuring Express Antivirus UTM Policies on page 210](#)
- [Example: Attaching Express Antivirus UTM Policies to Security Policies on page 211](#)

### Express Antivirus Configuration Overview

**Supported Platforms**   [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

For each UTM feature, you should configure feature parameters in the following order:

1. Configure UTM custom objects for the UTM features. The following example enables the mime-pattern, url-pattern, and custom-url-category custom objects:

```
user@host# set security utm custom-objects mime-pattern
user@host# set security utm custom-objects url-pattern
user@host# set security utm custom-objects custom-url-category
```

2. Configure main feature parameters using feature profiles. The following examples enables the anti-virus feature profile:

```
user@host# set security utm feature-profile anti-virus juniper-express-engine
```

3. Configure a UTM policy for each protocol and attach this policy to a profile. The following example creates the utmp3 UTM policy for the HTTP protocol:

```
user@host# set security utm utm-policy utmp3 anti-virus http-profile http1
```

4. Attach the UTM policy to a security policy. The following example attaches the utmp3 UTM policy to the p3 security policy:

```
user@host# set security policies from-zone trust to-zone untrust policy p3 then permit
application-services utm-policy utmp3
```

- [Configuring Express Antivirus UTM Policies \(J-Web Procedure\) on page 217](#)

## Example: Configuring Express Antivirus Custom Objects

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

This example shows how to configure express antivirus custom objects.

- [Requirements on page 202](#)
- [Overview on page 202](#)
- [Configuration on page 203](#)
- [Verification on page 204](#)

### Requirements

---

Before you begin:

- Decide the type of express antivirus protection you require. See “[Express Antivirus Protection Overview](#)” on page 197.
- Understand the order in which express antivirus parameters are configured. See “[Express Antivirus Configuration Overview](#)” on page 201.

### Overview

---

In this example, you define custom objects that are used to create express antivirus feature profiles. You perform the following tasks to define custom objects:

- Create two MIME lists called avmime2 and ex-avmime2, and add patterns to the list.
- Configure a URL pattern list called urllist2.

When entering the URL pattern, note the following wildcard character support:

- The \\*\.[]\?\* wildcard characters are supported.
- You must precede all wildcard URLs with http://.

- You can use the asterisk \* wildcard character only if it is at the beginning of the URL and is followed by a period.
- You can use the question mark ? wildcard character only at the end of the URL.
- The following wildcard syntax is supported: `http://*example.net`, `http://www.example.ne?`, `http://www.example.n??`.
- The following wildcard syntax is not supported: `*example.net`, `www.example.ne?`, `http://*example.net`, `http://*`.
- Configure a custom URL category list called `custurl2`, using the `urllist2` URL pattern list.

### Configuration

#### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm custom-objects mime-pattern avmime2 value [video/quicktime
image/x-portable-anymap x-world/x-vrml]
set security utm custom-objects mime-pattern ex-avmime2 value
[video/quicktime-inappropriate]
set security utm custom-objects url-pattern urllist2 value [http://www.example.net
1.2.3.4]
set security utm custom-objects custom-url-category custurl2 value urllist2
```

#### Step-by-Step Procedure

The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure express antivirus filtering custom objects:

1. Create MIME lists, and add MIME patterns to the lists.

```
[edit security utm]
user@host# set custom-objects mime-pattern avmime2 value [video/quicktime
image/x-portable-anymap x-world/x-vrml]
user@host# set custom-objects mime-pattern ex-avmime2 value
[video/quicktime-inappropriate]
```

**NOTE:** Because you use URL pattern lists to create custom URL category lists, you must configure URL pattern list custom objects before you configure custom URL category list.

2. Configure a URL pattern list custom object.

```
[edit security utm]
user@host# set custom-objects url-pattern urllist2 value [http://www.example.net
1.2.3.4]
```

3. Configure a custom URL category list.

```
[edit security utm]
user@host# set custom-objects custom-url-category custurl2 value urllist2
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
user@host# show security utm
custom-objects {
  mime-pattern {
    avmime2 {
      value [ video/quicktime image/x-portable-anymap x-world/x-vrml ];
    }
    ex-avmime2 {
      value video/quicktime-inappropriate;
    }
  }
  url-pattern {
    urllist2 {
      value [ http://www.example.net 1.2.3.4 ];
    }
  }
  custom-url-category {
    custurl2 {
      value urllist2;
    }
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying Express Antivirus Custom Objects on page 204](#)

#### **Verifying Express Antivirus Custom Objects**

**Purpose** Verify the express antivirus custom objects.

**Action** From operational mode, enter the **show configuration security utm** command.

**Related Documentation**

- [UTM Express Antivirus Protection Feature Guide for Security Devices](#)
- [Configuring Express Antivirus Custom Objects \(J-Web Procedure\) on page 212](#)
- [Attaching Express Antivirus UTM Policies to Security Policies \(J-Web Procedure\) on page 217](#)
- [Configuring Express Antivirus \(J-Web Procedure\)](#)

- [Configuring Express Antivirus Feature Profiles \(J-Web Procedure\) on page 214](#)

## Example: Configuring Express Antivirus Feature Profiles

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX650

This example shows how to configure an express antivirus feature profile.

- [Requirements on page 205](#)
- [Overview on page 205](#)
- [Configuration on page 206](#)
- [Verification on page 209](#)

### Requirements

Before you begin:

- Decide the type of express antivirus protection you require. See [“Express Antivirus Protection Overview” on page 197](#).
- Understand the order in which express antivirus parameters are configured. See [“Express Antivirus Configuration Overview” on page 201](#).
- MIME patterns must be defined for lists and exception lists. See [“Example: Configuring MIME Whitelists to Bypass Antivirus Scanning” on page 380](#).
- Custom objects must be defined. See [“Example: Configuring Express Antivirus Custom Objects” on page 202](#)
- SMTP must be configured on the device. See [“Understanding SMTP Antivirus Scanning” on page 333](#)

### Overview

In this example, you configure a feature profile called `junexprof1` and specify custom objects to be used for filtering content.

- Select and configure the Juniper Express Engine as the engine type.
- Select 120 as the time interval for updating the pattern database. The default antivirus pattern-update interval is once a day.

**NOTE:** The command for changing the URL for the pattern database is:

```
[edit]
user@host# set security utm feature-profile anti-virus juniper-express-engine
pattern-update url http://...
```

Under most circumstances, you should not need to change the default URL.

- Enable an e-mail notification with a custom message as pattern file was updated and a custom subject line as AV pattern file updated.
- Configure a list of fallback options as block.
- Configure the notification options for fallback blocking for virus detection. Configure a custom message for the fallback blocking action, and send a notification.
- Configure a notification for protocol-only virus detection, and send a notification as Antivirus Alert.
- Configure content size parameters as 20000.

**NOTE:** For SRX100, SRX110, SRX210, SRX220, and SRX240 devices, the maximum value for content size is 20,000. For SRX650 devices, the maximum value for content size is 40,000.

- Enable intelligent prescreening and set its timeout setting to 1800 seconds and trickling setting (applicable only to HTTP) to 600 seconds. This means that if the device receives a packet within a 600-second period during a file transfer or while performing an antivirus scan, it should not time out

**NOTE:** Intelligent prescreening is intended only for use with non-encoded traffic. It is not applicable to mail protocols (SMTP, POP3, IMAP) or HTTP POST.

- Configure the antivirus scanner to use MIME bypass lists and exception lists. You can use your own custom object lists, or you can use the default list, called junos-default-bypass-mime, which ships with the device. The following example enables the avmime2 and ex-avmime2 lists.
- Configure the antivirus module to use URL bypass lists. If you are using a URL whitelist (valid only for HTTP traffic), this is a custom URL category that you previously configured as a custom object. For this example, you enable the custurl1 bypass list.

## Configuration

### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile anti-virus juniper-express-engine pattern-update interval 120
set security utm feature-profile anti-virus juniper-express-engine pattern-update email-notify admin-email administrator@example.net custom-message "pattern file was updated" custom-message-subject "AV pattern file updated"
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1 fallback-options content-size block
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1 fallback-options default block
```

```

set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  fallback-options engine-not-ready block
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  fallback-options out-of-resources block
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  fallback-options timeout block
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  fallback-options too-many-requests block
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  notification-options fallback-block custom-message "Dropped due to fallback condition"
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  notification-options virus-detection type protocol-only
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  notification-options virus-detection custom-message ***virus-found***
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  scan-options content-size-limit 20000
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  scan-options intelligent-prescreening
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1
  scan-options timeout 1800
set security utm feature-profile anti-virus juniper-express-engine profile junexprof1 trickling
  timeout 600
set security utm feature-profile anti-virus mime-whitelist list avmime2
set security utm feature-profile anti-virus mime-whitelist list avmime2 exception
  ex-avmime2
set security utm feature-profile anti-virus url-whitelist custurl2

```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure express antivirus feature profiles:

1. Select and configure the engine type.  

```

[edit]
user@host# set security utm feature-profile anti-virus type juniper-express-engine

```
2. Select a time interval for updating the pattern database.  

```

[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set pattern-update interval 120

```
3. Configure the device to notify a specified administrator when patterns are updated.  

```

[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set pattern-update email-notify admin-email
  administrator@example.net custom-message "pattern file was updated"
  custom-message-subject "AV pattern file updated"

```
4. Create a profile for the Juniper Express Engine, and configure fallback options as block.  

```

[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set profile junexprof1 fallback-options content-size block
user@host# set profile junexprof1 fallback-options default block
user@host# set profile junexprof1 fallback-options engine-not-ready block
user@host# set profile junexprof1 fallback-options out-of-resources block

```

- ```
user@host# set profile junexprof1 fallback-options timeout block
user@host# set profile junexprof1 fallback-options too-many-requests block
```
5. Configure a custom notification for the fallback blocking action, and send a notification.  

```
[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set profile junexprof1 notification-options fallback-block
custom-message "Dropped due to fallback condition"
```
  6. Configure a notification for protocol-only virus detection, and send a notification.  

```
[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set profile junexprof1 notification-options virus-detection type
protocol-only
```
  7. Configure a custom notification for virus detection.  

```
[edit security utm feature-profile anti-virus juniper-express-engine]
set profile junexprof1 notification-options virus-detection custom-message
***virus-found***
```
  8. Configure content size parameter.  

```
[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set profile junexprof1 scan-options content-size-limit 20000
```
  9. Configure intelligent prescreening.  

```
[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set profile junexprof1 scan-options intelligent-prescreening
```
  10. Configure the timeout setting.  

```
[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set profile junexprof1 scan-options timeout 1800
```
  11. Configure trickling setting.  

```
[edit security utm feature-profile anti-virus juniper-express-engine]
user@host# set profile junexprof1 trickling timeout 600
```
  12. Configure the antivirus scanner to use MIME bypass lists and exception lists.  

```
[edit security utm feature-profile anti-virus]
user@host# set mime-whitelist list avmime2
user@host# set mime-whitelist list avmime2 exception ex-avmime2
```
  13. Configure the antivirus module to use URL bypass lists.  

```
[edit security utm feature-profile anti-virus]
user@host# set url-whitelist custurl2
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm feature-profile anti-virus** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
user@host# show security utm feature-profile anti-virus
mime-whitelist {
  list avmime2;
  exception ex-avmime2;
```

```

}
url-whitelist custurl2;
juniper-express-engine {
  pattern-update {
    email-notify {
      admin-email "administrator@example.net";
      custom-message "pattern file was updated";
      custom-message-subject "AV pattern file updated";
    }
    interval 120;
  }
  profile junexprofl {
    fallback-options {
      default block;
      content-size block;
      engine-not-ready block;
      timeout block;
      out-of-resources block;
      too-many-requests block;
    }
    scan-options {
      intelligent-prescreening;
      content-size-limit 20000;
      timeout 1800;
    }
    trickling timeout 600;
    notification-options {
      virus-detection {
        type protocol-only;
        custom-message ***virus-found***;
      }
      fallback-block {
        custom-message "Dropped due to fallback condition";
      }
    }
  }
}
}

```

If you are done configuring the device, enter **commit** from configuration mode.

## Verification

To confirm that the configuration is working properly, perform this task.

- [Verifying the Configuration of Express Antivirus Feature Profile on page 209](#)

### *Verifying the Configuration of Express Antivirus Feature Profile*

**Purpose** Verify the express antivirus feature profile.

**Action** From operational mode, enter any of the following commands:

- **show configuration security utm**
- **show security utm anti-virus status**

- **show security utm anti-virus statistics**

**Related Documentation**

- *UTM Express Antivirus Protection Feature Guide for Security Devices*
- [Configuring Express Antivirus UTM Policies \(J-Web Procedure\) on page 217](#)
- [Example: Configuring Express Antivirus UTM Policies on page 210](#)
- [Example: Attaching Express Antivirus UTM Policies to Security Policies on page 211](#)

## Example: Configuring Express Antivirus UTM Policies

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

This example shows how to create an express antivirus UTM policy to attach to your feature profile.

- [Requirements on page 210](#)
- [Overview on page 210](#)
- [Configuration on page 210](#)
- [Verification on page 210](#)

### Requirements

---

Before you begin, create an antivirus feature profile. See [“Example: Configuring Express Antivirus Feature Profiles” on page 205](#).

### Overview

---

In this example, you configure an express antivirus UTM policy called utmp3 and attach the policy to the antivirus profile called junexprof1.

### Configuration

---

**Step-by-Step Procedure**

To configure an express antivirus UTM policy:

1. Create a UTM policy for HTTP antivirus scanning and attach the policy to the profile.  

`[edit]  
user@host# set security utm utm-policy utmp3 anti-virus http-profile junexprof1`
2. If you are done configuring the device, commit the configuration.  

`[edit]  
user@host# commit`

### Verification

---

To verify the configuration is working properly, enter the **show security utm** command.

**Related Documentation**

- *UTM Express Antivirus Protection Feature Guide for Security Devices*
- [Express Antivirus Protection Overview on page 197](#)
- [Express Antivirus Configuration Overview on page 201](#)

- [Example: Attaching Express Antivirus UTM Policies to Security Policies on page 211](#)

## Example: Attaching Express Antivirus UTM Policies to Security Policies

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX650

This example shows how to attach an express antivirus UTM policy to a security policy.

- [Requirements on page 211](#)
- [Overview on page 211](#)
- [Configuration on page 211](#)
- [Verification on page 211](#)

### Requirements

Before you begin, create a UTM policy. See “[Example: Configuring Express Antivirus UTM Policies](#)” on page 210.

### Overview

In this example, you attach the express antivirus UTM policy called utmp3 to the security policy called p3.

### Configuration

#### Step-by-Step Procedure

To attach an express antivirus UTM policy to a security policy:

1. Enable and configure the security policy.
 

```
[edit]
user@host# set security policies from-zone trust to-zone untrust policy p3 match
source-address any
user@host# set security policies from-zone trust to-zone untrust policy p3 match
destination-address any
user@host# set security policies from-zone trust to-zone untrust policy p3 match
application junos-http
```
2. Attach the UTM policy to the security policy.
 

```
[edit]
user@host# set security policies from-zone trust to-zone untrust policy p3 then
permit application-services utm-policy utmp3
```
3. If you are done configuring the device, commit the configuration.
 

```
[edit]
user@host# commit
```

### Verification

To verify the configuration is working properly, enter **show security policies detail** from operational mode.

---

## Express Antivirus Protection (J-Web)

---

- [Configuring Express Antivirus Custom Objects \(J-Web Procedure\) on page 212](#)
- [Configuring Express Antivirus Feature Profiles \(J-Web Procedure\) on page 214](#)
- [Configuring Express Antivirus UTM Policies \(J-Web Procedure\) on page 217](#)
- [Attaching Express Antivirus UTM Policies to Security Policies \(J-Web Procedure\) on page 217](#)

### Configuring Express Antivirus Custom Objects (J-Web Procedure)

**Supported Platforms**    SRX100, SRX110, SRX210, SRX220, SRX240, SRX650

To configure express antivirus protection using the J-Web configuration editor, you must first create your custom objects (MIME pattern list, URL pattern list, and custom URL category list).

Configure a MIME pattern list custom object as follows:

1. Select **Configure>Security>UTM Custom Objects**.
2. From the MIME Pattern List tab, click **Add** to create MIME pattern lists.
3. In the Add MIME Pattern pop-up window, next to **MIME Pattern Name**, enter a unique name.

**NOTE:** Keep in mind that you are creating a MIME whitelist and a MIME exception list (if necessary). Both MIME lists appear in the MIME Whitelist and Exception MIME Whitelist fields when you configure antivirus. Therefore, the MIME list names you create should be as descriptive as possible.

4. Next to **MIME Pattern Value**, enter the MIME pattern.
5. Click **Add** to add your MIME pattern to the Values list box. Within this box, you can also select an entry and use the Delete button to delete it from the list. Continue to add MIME patterns in this manner.
6. Optionally, create a new MIME list to act as an exception list. The exception list is generally a subset of the main MIME list.

7. Click **OK** to check your configuration and save the selected values as part of the MIME list, then click **Commit Options>Commit**.
8. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

Configure a URL pattern list custom object as follows:

**NOTE:** Because you use URL pattern lists to create custom URL category lists, you must configure URL pattern list custom objects before you configure a custom URL category list.

1. Select **Configure>Security>UTM>Custom Objects**.
2. From the URL Pattern List tab, click **Add** to create URL pattern lists.
3. Next to **URL Pattern Name**, enter a unique name. This name appears in the Custom URL Category List Custom Object page for selection.
4. Next to **URL Pattern Value**, enter the URL or IP address you want added to list for bypassing scanning.

When entering the URL pattern, note the following wildcard character support:

- The `\*\.[\]\?*` wildcard characters are supported.
  - You must precede all wildcard URLs with `http://`.
  - You can only use the asterisk `*` wildcard character if it is at the beginning of the URL and is followed by a period.
  - You can only use the question mark `?` wildcard character at the end of the URL.
  - The following wildcard syntax IS supported: `http://*.juniper.net`, `http://www.juniper.ne?`, `http://www.juniper.n??`.
  - The following wildcard syntax is NOT supported: `*.juniper.net`, `www.juniper.ne?`, `http://*.juniper.net`, `http://*`.
5. Click **Add** to add your URL pattern to the Values list box. The list can contain up to 8192 items. You can also select an entry and use the Delete button to delete it from the list. Continue to add URLs or IP addresses in this manner.
  6. Click **OK** to check your configuration and save the selected values as part of the URL pattern list, then click **Commit Options>Commit**.
  7. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

Configure a custom URL category list custom object using the URL pattern list that you created:

1. Select **Configure>Security>UTM>Custom Objects**.
2. From the URL Category List tab, click **Add** to create URL category lists.
3. Next to **URL Category Name**, enter a unique name. This name appears in the URL Whitelist list when you configure antivirus global options.
4. In the Available Values box, select a **URL Pattern List** name from the list for bypassing scanning and click the right arrow button to move it to the Selected Values box.
5. Click **OK** to check your configuration and save the selected values as part of the URL list, then click **Commit Options>Commit**.
6. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

#### Related Documentation

- *UTM Express Antivirus Protection Feature Guide for Security Devices*
- [Express Antivirus Protection Overview on page 197](#)
- [Express Antivirus Configuration Overview on page 201](#)
- [Configuring Express Antivirus Feature Profiles \(J-Web Procedure\) on page 214](#)
- [Configuring Express Antivirus UTM Policies \(J-Web Procedure\) on page 217](#)

## Configuring Express Antivirus Feature Profiles (J-Web Procedure)

**Supported Platforms**   [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

After you create your custom objects, configure the antivirus feature profile:

1. Select **Configure>Security>UTM>Global options**.
2. In the Anti-Virus tab, next to **MIME whitelist**, select the custom object you created from the list.
3. Next to **Exception MIME whitelist**, select the custom object you created from the list.
4. Next to **URL Whitelist**, select the custom object you created from the list.
5. In the Engine Type section, select the type of engine you are using. For express antivirus protection, you should select **Juniper Express**.
6. Next to **Pattern update URL**, enter the URL for the pattern database in the box. Note that the URL is `http://update.juniper-updates.net/EAV/<device version>` and you should not change it.
7. Next to **Pattern update interval**, enter the time interval for automatically updating the pattern database in the box. The default for express antivirus checking is once per day.

8. Select whether you want the pattern file to update automatically (**Auto update**) or not (**No Auto update**).
9. Click **OK** to save the selected values.
10. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.
11. Under Security, in the left pane, select **Anti-Virus**.
12. Click **Add** in the right window to create a profile for the antivirus Juniper Express Engine. To edit an existing item, select it and click **Edit**.
13. In the Main tab, next to **Profile name**, enter a unique name for this antivirus profile.
14. Select the Profile Type. In this case, select **Juniper Express**.
15. Next to **Trickling timeout**, enter timeout parameters.

**NOTE:** Trickling applies only to HTTP. HTTP trickling is a mechanism used to prevent the HTTP client or server from timing out during a file transfer or during antivirus scanning.

16. Next to Intelligent prescreening, select **Yes** or **No**.

**NOTE:** Intelligent prescreening is only intended for use with non-encoded traffic. It is not applicable for mail protocols (SMTP, POP3, IMAP, and HTTP POST).

17. Next to **Content Size Limit**, enter content size parameters. The content size check occurs before the scan request is sent. The content size refers to accumulated TCP payload size.
18. Next to **Scan engine timeout**, enter scanning timeout parameters.
19. Select the **Fallback settings** tab.
20. Next to Default (fallback option), select **Log and permit** or **Block** from the list. In most cases, Block is the default fallback option.
21. Next to Decompress Layer (fallback option), select **Log and permit** or **Block** from the list.
22. Next to Content Size (fallback option), select **Log and permit** or **Block** from the list.
23. Next to Engine Not Ready (fallback option), select **Log and permit** or **Block** from the list.
24. Next to Timeout (fallback option), select **Log and permit** or **Block** from the list.
25. Next to Out of Resource (fallback option), select **Log and permit** or **Block** from the list.
26. Next to Too Many Requests (fallback option), select **Log and permit** or **Block** from the list.

27. Select the **Notification options** tab.
28. In the Fallback block section, next to Notification type, select **Protocol Only** or **Message** to select the type of notification that is sent when a fallback option of block is triggered.
29. Next to Notify mail sender, select **Yes** or **No**.
30. If you selected Yes, next to **Custom Message**, enter text for the message body of your custom message for this notification (if you are using a custom message).
31. Next to **Custom message subject**, enter text to appear in the subject line of your custom message for this notification (if you are using a custom message).
32. In the Fallback non block section, next to Notify mail recipient, select **Yes** or **No**.
33. If you selected Yes, next to **Custom Message**, enter text for the message body of your custom message for this notification (if you are using a custom message).
34. Next to **Custom message subject**, enter text to appear in the subject line of your custom message for this notification (if you are using a custom message).
35. Select the **Notification options cont** tab.
36. In the Virus detection section, next to Notification type, select **Protocol Only** or **Message** to select the type of notification that is sent when a fallback option of block is triggered.
37. Next to Notify mail sender, select **Yes** or **No**.
38. If you selected Yes, next to **Custom Message**, enter text for the message body of your custom message for this notification (if you are using a custom message).
39. Next to **Custom message subject**, enter text to appear in the subject line of your custom message for this notification (if you are using a custom message). The limit is 255 characters.
40. Click **OK** to check your configuration and save it as a candidate configuration, then click **Commit Options>Commit**.
41. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up that appears window to discover why.

**NOTE:** You create a separate antivirus profile for each antivirus protocol. These profiles may basically contain the same configuration information, but when you are creating your UTM policy for antivirus, the UTM policy configuration page provides separate antivirus profile selection fields for each supported protocol.

## Configuring Express Antivirus UTM Policies (J-Web Procedure)

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX650

After you have created an antivirus feature profile, configure a UTM policy to which you can attach the feature profile:

1. Select **Configure>Security>Policy>UTM Policies**.
2. From the UTM policy configuration window, click **Add** to configure a UTM policy. The policy configuration pop-up window appears.
3. Select the **Main** tab.
4. In the **Policy name** box, enter a unique name.
5. In the **Session per client limit** box, enter a session per client limit from 0 to 20000 for this UTM policy.
6. In the Session per client over limit list, select the action that the device should take when the session per client limit for this UTM policy is exceeded. Options include **Log and permit** and **Block**.
7. Select the **Anti-Virus profiles** tab.
8. Select the appropriate profile you have configured from the list for the corresponding protocol listed.
9. Click **OK**.
10. If the policy is saved successfully, you receive a confirmation and you must click **OK** again. If the profile is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

## Attaching Express Antivirus UTM Policies to Security Policies (J-Web Procedure)

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX650

After you create a UTM policy, create a security policy and attach the UTM policy to the security policy:

1. Select **Configure>Security>Policy>FW Policies**.
2. From the Security Policy window, click **Add** to configure a security policy with UTM. The policy configuration pop-up window appears.
3. In the Policy tab, enter a name in the **Policy Name** box.
4. Next to Default Policy Action, select one of the following: **Deny-All** or **Permit-All**.
5. Next to **From Zone**, select a zone from the list.
6. Next to **To Zone**, select a zone from the list.
7. Under Zone Direction, click **Add a Policy**.
8. Choose a **Source Address**.
9. Choose a **Destination Address**.
10. Choose an application by selecting **junos-protocol** (for all protocols that support antivirus scanning) in the Application Sets box and clicking the —> button to move it to the Matched box.
11. Next to Policy Action, select **Permit**.

**NOTE:** When you select Permit for Policy Action, several additional fields become available in the Applications Services tab, including UTM Policy.

12. Select the **Application Services** tab.
13. Next to **UTM Policy**, select the appropriate policy from the list. This action attaches your UTM policy to the security policy.
14. Click **OK**.
15. Click **OK** to check your configuration and save it as a candidate configuration, then click **Commit Options>Commit**.
16. If the policy is saved successfully, you receive a confirmation and you must click **OK** again. If the profile is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

You must activate your new policy to apply it.

### Example: Automatically Updating Express Antivirus Patterns

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

This example shows how to update the pattern file automatically on a security device.

- [Requirements on page 219](#)
- [Overview on page 219](#)
- [Configuration on page 219](#)
- [Verification on page 219](#)

#### Requirements

Before you begin:

- Obtain a valid antivirus scanner license. See [“Full Antivirus Protection Overview” on page 323](#).
- Get network connectivity and access to the pattern database server. See [“Understanding Full Antivirus Pattern Updates” on page 324](#).
- Configure your DNS settings and port settings (port 80) correctly. See [DNS Overview](#).

#### Overview

In this example, you configure the security device to update the pattern file automatically every 120 minutes. (The default antivirus pattern-update interval is once a day.)

#### Configuration

##### Step-by-Step Procedure

To configure the security device to update the pattern file automatically:

1. Set the interval.  

```
[edit]
user@host# set security utm feature-profile anti-virus juniper-express-engine
pattern-update interval 120
```
2. If you are done configuring the device, commit the configuration.  

```
[edit]
user@host# commit
```

#### Verification

To verify the configuration is working properly, enter the **show security utm** command.

## Example: Automatically Updating Express Antivirus Patterns (J-Web)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

In this example, you configure the security device to update the pattern file automatically every 120 minutes. (The default antivirus pattern-update interval is once a day.)

To automatically update antivirus patterns:

1. Select **Configure>Security>UTM>Anti-Virus**.
2. Next to Interval, in the Juniper Express Engine section, enter **120** in the box.
3. Click **OK** to check your configuration and save it as a candidate configuration, then click **Commit Options>Commit**.

## Manually Updating, Reloading, and Deleting Express Antivirus Patterns (CLI Procedure)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

To manually update antivirus patterns, enter the following CLI statement:

```
user@host> request security utm anti-virus juniper-express-engine pattern-update
```

To manually reload antivirus patterns, enter the following CLI statement:

```
user@host> request security utm anti-virus juniper-express-engine pattern-reload
```

To manually delete antivirus patterns, enter the following CLI statement:

```
user@host> request security utm anti-virus juniper-express-engine pattern-delete
```

## Security Configuration Statement Hierarchy

### Supported Platforms [LN Series](#), [SRX Series](#)

Use the statements in the **security** configuration hierarchy to configure actions, certificates, dynamic virtual private networks (VPNs), firewall authentication, flow, forwarding options, group VPNs, Intrusion Detection Prevention (IDP), Internet Key Exchange (IKE), Internet Protocol Security (IPsec), logging, Network Address Translation (NAT), public key infrastructure (PKI), policies, resource manager, rules, screens, secure shell known hosts, trace options, user identification, Unified Threat Management (UTM), and zones. Statements that are exclusive to the SRX Series devices running Junos OS are described in this section.

Each of the following topics lists the statements at a sub-hierarchy of the **[edit security]** hierarchy.

- *[edit security address-book] Hierarchy Level*
- *[edit security alarms] Hierarchy Level*
- *[edit security alg] Hierarchy Level*
- *[edit security analysis] Hierarchy Level*
- *[edit security application-firewall] Hierarchy Level*
- *[edit security application-tracking] Hierarchy Level*
- *[edit security certificates] Hierarchy Level*
- *[edit security datapath-debug] Hierarchy Level*
- *[edit security dynamic-vpn] Hierarchy Level*
- *[edit security firewall-authentication] Hierarchy Level*
- *[edit security flow] Hierarchy Level*
- *[edit security forwarding-options] Hierarchy Level*
- *[edit security forwarding-process] Hierarchy Level*
- *[edit security gprs] Hierarchy Level*
- *[edit security group-vpn] Hierarchy Level*
- *[edit security idp] Hierarchy Level*

## anti-virus (Security UTM Policy)

---

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

**Syntax**

```
anti-virus {  
  ftp {  
    download-profile profile-name;  
    upload-profile profile-name;  
  }  
  http-profile profile-name;  
  imap-profile profile-name;  
  pop3-profile profile-name;  
  smtp-profile profile-name;  
}
```

**Hierarchy Level** [edit security utm utm-policy *policy-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure a UTM policy for the antivirus protocols and attach this policy to a security profile to implement it.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege** security—To view this statement in the configuration.  
**Level** security-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- *UTM Express Antivirus Protection Feature Guide for Security Devices*

## application (Security Policies)

**Supported Platforms** [LN Series](#), [SRX Series](#)

**Syntax**

```
application {
    [application];
    any;
}
```

**Hierarchy Level** [edit security policies from-zone *zone-name* to-zone *zone-name* policy *policy-name* match]  
[edit security policies global policy *policy-name* match]

**Release Information** Statement introduced in Junos OS Release 8.5.

**Description** Specify the IP or remote procedure call (RPC) application or set of applications to be used as match criteria.

**Options** *application-name-or-set*—Name of the predefined or custom application or application set used as match criteria.

*any*—Any predefined or custom applications or application sets.

**NOTE:** A custom application that does not use a well-known destination port for the application will not be included in the *any* option, and must be named explicitly.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## content-size

---

**Supported Platforms** [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Syntax** content-size (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* fallback-options]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* fallback-options]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** If the content size exceeds a set limit, the content is either passed or blocked. The default action is log-and-permit.

**NOTE:** When you configure the content-size value, keep in mind that in certain cases, content size is available in the protocol headers, so the max-content-size fallback is applied before a scan request is sent. However, in many cases, content size is not provided in the protocol headers. In these cases, the TCP payload is sent to the antivirus scanner and accumulates until the end of the payload. If the accumulated payload exceeds the maximum content size value, then max-content-size fallback is applied. The default fallback action is log and permit, so you may want to change this option to block, in which case such a packet is dropped and a block message is sent to the client.

- Options**
- **block**—Log the error and deny the traffic
  - **log-and-permit**—Log the error and permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## custom-objects

---

**Supported Platforms** [SRX Series](#)

**Syntax**

```
custom-objects {  
  custom-url-category object-name {  
    value [value];  
  }  
  filename-extension object-name {  
    value [value];  
  }  
  mime-pattern object-name {  
    value [value];  
  }  
  protocol-command object-name {  
    value [value];  
  }  
  url-pattern object-name {  
    value [value];  
  }  
}
```

**Hierarchy Level** [edit security utm]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Configure custom objects before configuring UTM feature-profile features.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommended having a custom category name be the same as the predefined category name.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level**

## custom-url-category

**Supported Platforms** [SRX Series](#)

**Syntax** `custom-url-category object-name {  
value [value];  
}`

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Use URL pattern lists to create Custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

- Options**
- ***object-name***—Name of the URL category-list object.
  - ***value value***—Value of the URL category-list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## fallback-options (Security Antivirus Juniper Express Engine)

---

**Supported Platforms** [SRX210, SRX220, SRX240](#)

**Syntax**

```
fallback-options {  
  content-size (block | log-and-permit);  
  default (block | log-and-permit);  
  engine-not-ready (block | log-and-permit);  
  out-of-resources (block | (log-and-permit);  
  timeout (block | log-and-permit);  
  too-many-requests (block | log-and-permit);  
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Fallback options tell the system how to handle the errors.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

| <b>Description</b>              | <p>Enable intelligent prescreening.</p> <p>Intelligent prescreening tells the antivirus module to begin scanning a file much earlier. In this case, the scan engine uses the first packet or the first several packets to determine if a file could possibly contain malicious code. The scan engine does a quick check on these first packets and if the scan engine finds that it is unlikely that the file is infected, it then determines that it is safe to bypass the normal scanning procedure.</p> <p>You can disable intelligent prescreening with the <b>no-intelligent-prescreening</b> statement.</p> |
| <b>Required Privilege Level</b> | <p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## interval (Security Antivirus)

---

**Supported Platforms** [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Syntax** interval *value*;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine pattern-update]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update]  
[edit security utm feature-profile anti-virus sophos-engine pattern-update]

**Release Information** Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** Set the pattern data files auto-update interval. You can choose to leave the default interval value or you can change it by using this command. You can also force a manual update, if necessary.

**NOTE:** The data files used with Sophos are not typical virus pattern files; they are small files that help guide virus scanning logic. The full virus pattern database is stored on an external Sophos server called the Sophos Extensible List (SXL) server.

---

**Options** *value*—Pattern data files auto-update interval in minutes.

**Range:** 10 through 10,080 minutes (10 minutes through 7 days)

**Default:** For Juniper Express engine and Kaspersky Lab engine, 60 minutes; for Sophos engine, 1440 minutes (every 24 hours)

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## mime-whitelist

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

**Syntax**

```
mime-whitelist {
  exception listname;
  list listname {
    exception listname;
  }
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus]

**Release Information** Statement introduced in Junos OS Release 9.5. Statement updated for Sophos antivirus support in Junos OS Release 11.1.

**Description** Configure the antivirus scanner to use MIME bypass lists and exception lists. You can use your own custom object lists, or you can use the default list that ships with the device called junos-default-bypass-mime.

**WARNING:** When you configure the MIME whitelist feature, be aware that, because header information in HTTP traffic can be spoofed, you cannot always trust HTTP headers to be legitimate. When a Web browser is determining the appropriate action for a given file type, it detects the file type without checking the MIME header contents. However, the MIME whitelist feature does refer to the MIME encoding in the HTTP header. For these reasons, it is possible in certain cases for a malicious website to provide an invalid HTTP header. For example, a network administrator might inadvertently add a malicious website to a MIME whitelist, and, because the site is in the whitelist, it will not be blocked by Sophos even though Sophos has identified the site as malicious in its database. Internal hosts would then be able to reach this site and could become infected.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

| <b>Release Information</b> | Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.                                                                                         |
| <b>Description</b>         | Turn off automatic data file (pattern file) update for the Kaspersky Lab, Juniper Express, or Sophos engines.                                                                                                                                             |

**NOTE:** The data files used with Sophos are not typical virus pattern files; they are small files that help guide virus scanning logic. The full virus pattern database is stored on an external Sophos server called the Sophos Extensible List (SXL) server.

| <b>Description</b>              | <p>Disables intelligent prescreening.</p> <p>Intelligent prescreening tells the antivirus module to begin scanning a file much earlier. In this case, the scan engine uses the first packet or the first several packets to determine if a file could possibly contain malicious code. The scan engine does a quick check on these first packets and if the scan engine finds that it is unlikely that the file is infected, it then determines that it is safe to bypass the normal scanning procedure.</p> <p>You can enable intelligent prescreening with the <b>intelligent-prescreening</b> statement.</p> |

## pattern-update (Security Antivirus)

---

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

**Syntax**

```
pattern-update {  
  email-notify {  
    admin-email email-address;  
    custom-message message;  
    custom-message-subject message-subject;  
  }  
  interval value;  
  no-autoupdate;  
  proxy {  
    password password-string;  
    port port-number;  
    server address-or-url;  
    username name;  
  }  
  url url;  
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
[edit security utm feature-profile anti-virus sophos-engine]

**Release Information** Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** Updates to the pattern file are added as new viruses are discovered. You can configure the security device to regularly update the pattern file automatically, or you can update the file manually.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## profile (Security Antivirus Juniper Express Engine)

**Supported Platforms** SRX210, SRX220, SRX240

**Syntax**

```
profile profile-name {
  fallback-options {
    content-size (block | log-and-permit);
    default (block | log-and-permit);
    engine-not-ready (block | log-and-permit);
    out-of-resources (block | log-and-permit);
    timeout (block | log-and-permit);
    too-many-requests (block | log-and-permit);
  }
  notification-options {
    fallback-block {
      administrator-email email-address;
      allow-email;
      custom-message message;
      custom-message-subject message-subject;
      display-host;
      (notify-mail-sender | no-notify-mail-sender);
      type (message | protocol-only);
    }
    fallback-non-block {
      custom-message message;
      custom-message-subject message-subject;
      (notify-mail-recipient | no-notify-mail-recipient);
    }
  }
  virus-detection {
    custom-message message;
    custom-message-subject message-subject;
    (notify-mail-sender | no-notify-mail-sender);
    type (message | protocol-only);
  }
}
scan-options {
  content-size-limit value;
  (intelligent-prescreening | no-intelligent-prescreening);
  timeout value;
}
trickling {
  timeout value;
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Create a profile for the Juniper express engine. This profile includes all subsequent configuration options.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

| <b>Release Information</b>      | Statement introduced in Junos OS Release 9.5.                                                                                                                                                                                                                                                                                                         |
| <b>Description</b>              | Scanning a complex file could consume resources and time. If the time it is taking to scan exceeds the timeout setting in the antivirus profile, the processing is aborted and the content is either passed or blocked without completing the virus checking. The decision is made based on the timeout fallback option. The default action is block. |
| <b>Options</b>                  | <ul style="list-style-type: none"><li>• <b>block</b>—Log the error and deny the traffic</li><li>• <b>log-and-permit</b>—Log the error and permit the traffic</li></ul>                                                                                                                                                                                |

    syn-check-required;
}
tunnel {
    ipsec-group-vpn group-vpn;
    ipsec-vpn vpn-name;
    pair-policy pair-policy;
}
}
reject;
}
}

```

**Hierarchy Level** [edit security policies from-zone *zone-name*]

**Release Information** Statement introduced in Junos OS Release 8.5. Support for the **services-offload** and **junos-host** options added in Junos OS Release 11.4. Support for the **source-identity** option added in Junos OS Release 12.1. Support for the **ssl-termination-profile** and **web-redirect-to-https** options added in Junos OS Release 12.1X44-D10.

**Description** Specify a destination zone to be associated with the security policy.

- Options**
- **zone-name**—Name of the destination zone object.
  - **junos-host**—Default security zone for self-traffic of the device.

The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## too-many-requests (Security Antivirus Fallback Options)

---

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

**Syntax** too-many-requests (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* fallback-options]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* fallback-options]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** If the total number of messages received concurrently exceeds 4000, the content is either passed or blocked depending on the too-many-request fallback option. The default action is block. (The allowed request limit is not configurable.)

- Options**
- **block**—Log the error and deny the traffic
  - **log-and-permit**—Log the error and permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## trickling

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

**Syntax**

```
trickling {
    timeout value;
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name*]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name*]  
[edit security utm feature-profile anti-virus sophos-engine profile *profile-name*]

**Release Information** Statement introduced in Junos OS Release 9.5. Statement updated for Sophos support in Junos OS Release 11.1.

**Description** HTTP trickling is a mechanism used to prevent the HTTP client or server from timing-out during a file transfer or during antivirus scanning. HTTP Trickling is time-based and there is only one parameter to configure for this feature, which is the timeout Interval. By default, trickling is disabled.

**WARNING:** When you enable the trickling option, keep in mind that trickling might send part of a file to the client during its antivirus scan. It is therefore possible that some of the content could be received by the client before the file has been fully scanned.

**Options** *value*—Timeout interval in seconds.

**Range:** 0 through 600 seconds

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## url-pattern

---

### Supported Platforms

**Syntax**    `url-pattern object-name {  
                  value [value];  
                  }`

**Hierarchy Level**    [edit security utm custom-objects]

**Release Information**    Statement introduced in Junos OS Release 9.5.

**Description**    Use URL pattern lists to create custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

- Options**
- ***object-name***—Name of the URL list object.
  - ***value value***—Value of the URL list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**    security—To view this statement in the configuration.  
                                         security-control—To add this statement to the configuration.

| <b>Output Fields</b>            | This command produces no output.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## Sample Output

### clear security utm antivirus statistics

```
user@host> clear security utm anti-virus statistics
```

## request security utm anti-virus juniper-express-engine

---

**Supported Platforms** [SRX210, SRX220, SRX240, SRX550, SRX650](#)

**Syntax** request security utm anti-virus juniper-express-engine

**Release Information** Command introduced in Release 9.5 of Junos OS.  
Support for UTM in chassis cluster added in Release 11.4 of Junos OS.

**Description** Manually update the express antivirus pattern database using the command described. You can update the express antivirus pattern database automatically or manually. With full chassis cluster support for UTM this command is operational on both the nodes.

- Options**
- **pattern-delete** — Delete the current express antivirus pattern database.
  - **pattern-reload** — Reload the express antivirus pattern database.
  - **pattern-update** — Update the express antivirus pattern database with the latest signatures.

**Required Privilege Level** maintenance

- Related Documentation**

  - [clear security utm antivirus statistics on page 304](#)
  - [show security utm anti-virus statistics on page 316](#)
  - [show security utm anti-virus status on page 318](#)
  - *UTM Express Antivirus Protection Feature Guide for Security Devices*

**List of Sample Output** [request security utm anti-virus juniper-express-engine pattern-update on page 305](#)

**Output Fields** request security utm anti-virus juniper-express-engine pattern-update

When you enter this command, you are provided feedback on the status of your request.

### Sample Output

[request security utm anti-virus juniper-express-engine pattern-update](#)

```
user@host> request security utm anti-virus juniper-express-engine pattern-update
```

## show security policies

---

### Supported Platforms

**Syntax** show security policies  
<detail>  
<none>  
policy-name *policy-name*  
<detail>  
<global>

**Release Information** Command modified in Junos OS Release 9.2. Support for IPv6 addresses added in Junos OS Release 10.2. Support for IPv6 addresses in active/active chassis cluster configurations in addition to the existing support of active/passive chassis cluster configurations added in Junos OS Release 10.4. Support for wildcard addresses added in Junos OS Release 11.1. Support for global policy added in Junos OS Release 11.4. Support for services offloading added in Junos OS Release 11.4. Support for source-identities added in Junos OS Release 12.1. The **Description** output field added in Junos OS Release 12.1. Support for negated address added in Junos OS Release 12.1X45-D10. The output fields for Policy Statistics expanded, and the output fields for the **global** and **policy-name** options expanded to include from-zone and to-zone global match criteria in Junos OS Release 12.1X47-D10.

**Description** Display a summary of all security policies configured on the device. If a particular policy is specified, display information particular to that policy.

- Options**
- **none**—Display basic information about all configured policies.
  - **detail**—(Optional) Display a detailed view of all of the policies configured on the device.
  - **policy-name *policy-name***—(Optional) Display information about the specified policy.
  - **global**—Display information about global policies.

**Required Privilege Level** view

**Output Fields** Table 7 on page 188 lists the output fields for the **show security policies** command. Output fields are listed in the approximate order in which they appear.

**Table 8: show security policies Output Fields**

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>From zone</b>                        | Name of the source zone.                                                                                                                                                                                                                                                                                                                                                   |
| <b>To zone</b>                          | Name of the destination zone.                                                                                                                                                                                                                                                                                                                                              |
| <b>Policy</b>                           | Name of the applicable policy.                                                                                                                                                                                                                                                                                                                                             |
| <b>Description</b>                      | Description of the applicable policy.                                                                                                                                                                                                                                                                                                                                      |
| <b>State</b>                            | Status of the policy: <ul style="list-style-type: none"> <li>• <b>enabled:</b> The policy can be used in the policy lookup process, which determines access rights for a packet and the action taken in regard to it.</li> <li>• <b>disabled:</b> The policy cannot be used in the policy lookup process, and therefore it is not available for access control.</li> </ul> |
| <b>Index</b>                            | Internal number associated with the policy.                                                                                                                                                                                                                                                                                                                                |
| <b>Sequence number</b>                  | Number of the policy within a given context. For example, three policies that are applicable in a from-zoneA-to-zoneB context might be ordered with sequence numbers 1, 2, 3. Also, in a from-zoneC-to-zoneD context, four policies might have sequence numbers 1, 2, 3, 4.                                                                                                |
| <b>Source addresses</b>                 | For standard display mode, the names of the source addresses for a policy. Address sets are resolved to their individual names.<br><br>For detail display mode, the names and corresponding IP addresses of the source addresses for a policy. Address sets are resolved to their individual address name-IP address pairs.                                                |
| <b>Destination addresses</b>            | Name of the destination address (or address set) as it was entered in the destination zone's address book. A packet's destination address must match this value for the policy to apply to it.                                                                                                                                                                             |
| <b>Source addresses (excluded)</b>      | Name of the source address excluded from the policy.                                                                                                                                                                                                                                                                                                                       |
| <b>Destination addresses (excluded)</b> | Name of the destination address excluded from the policy.                                                                                                                                                                                                                                                                                                                  |
| <b>Source identities</b>                | One or more user roles specified for a policy.                                                                                                                                                                                                                                                                                                                             |

Table 8: show security policies Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Applications                    | <p>Name of a preconfigured or custom application whose type the packet matches, as specified at configuration time.</p> <ul style="list-style-type: none"> <li>• <b>IP protocol</b>: The Internet protocol used by the application—for example, TCP, UDP, ICMP.</li> <li>• <b>ALG</b>: If an ALG is explicitly associated with the policy, the name of the ALG is displayed. If <b>application-protocol ignore</b> is configured, ignore is displayed. Otherwise, 0 is displayed. However, even if this command shows ALG: 0, ALGs might be triggered for packets destined to well-known ports on which ALGs are listening, unless ALGs are explicitly disabled or when <b>application-protocol ignore</b> is not configured for custom applications.</li> <li>• <b>Inactivity timeout</b>: Elapsed time without activity after which the application is terminated.</li> <li>• <b>Source port range</b>: The low-high source port range for the session application.</li> </ul> |
| Destination Address Translation | <p>Status of the destination address translation traffic:</p> <ul style="list-style-type: none"> <li>• <b>drop translated</b>—Drop the packets with translated destination addresses.</li> <li>• <b>drop untranslated</b>—Drop the packets without translated destination addresses.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## show security utm status

---

### Supported Platforms

**Syntax**    show security utm status

**Release Information**    Command introduced in Junos OS Release 9.5.  
Support for UTM in chassis cluster added in Junos OS Release 11.4.

**Description**    Display whether the UTM service is running or not and status of both the nodes (with full chassis cluster support for UTM).

**Required Privilege Level**    view

**Related Documentation**

- [clear security utm session on page 40](#)
- [show security utm session on page 315](#)
- *Junos OS UTM Library for Security Devices*

**Output Fields**    show security utm status

Output fields are listed in the approximate order in which they appear.

## show security utm status

```
user@host> show security utm status
UTM service status: Running
```

## show security utm session

## Full Antivirus Protection

---

- [Full Antivirus Protection Overview on page 323](#)

### Full Antivirus Protection Overview

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

A virus is executable code that infects or attaches itself to other executable code in order to reproduce itself. Some malicious viruses erase files or lock up systems, while other viruses merely infect files and can overwhelm the target host or network with bogus data. The full file-based antivirus feature provides file-based scanning on specific Application Layer traffic checking for viruses against a virus signature database. It collects the received data packets until it has reconstructed the original application content, such as an e-mail file attachment, and then scans this content.

The full file-based antivirus scanning feature is a separately licensed subscription service. Kaspersky Lab provides the scan engine for full file-based antivirus. When your antivirus license key expires, you can continue to use locally stored antivirus signatures without any updates. But in that case, if the local database is deleted, antivirus scanning is disabled.

**NOTE:** The express antivirus feature provides better performance but lower security. Note that if you switch from full file-based antivirus protection to express antivirus protection, you must reboot the device in order for express antivirus to begin working.

The Kaspersky scan engine is provided as a downloadable UTM module. To download the Kaspersky scan engine, your SRX Series device must have an active UTM license. When you install the KAV license, the system automatically downloads the Kaspersky module from the Juniper Networks server and runs it.

When you set the antivirus type to KAV, and if the SRX Series device had a preinstalled Kaspersky engine, then the downloaded module replaces the original module on the device. Regardless of the UTM license status, when the KAV license is deleted from the device, the Kaspersky engine and all files associated with KAV are removed from the system immediately.

Use the **set security utm feature-profile anti-virus type kaspersky-lab-engine** command to set the antivirus type to KAV. If Kaspersky engine is not available on the device, and if the Kaspersky engine cannot be downloaded from the predefined URL, then use the **set security utm feature-profile anti-virus kaspersky-lab-engine pattern-update url url** command to configure the downloading application URL.

### Understanding Full Antivirus Pattern Updates

**Supported Platforms**    **SRX100, SRX110, SRX210, SRX220, SRX240, SRX650**

The full file-based antivirus protection signature database is called the Juniper Full antivirus database (downloaded by the pattern-update command). This database is different from the database used by express antivirus. It detects all destructive malicious code, including viruses (polymorphic and other advanced virus types), worms, Trojans, and malware.

Updates to the pattern file are added as new viruses are discovered. When Kaspersky Lab updates the signatures in its pattern database, the security device downloads these updates so that the antivirus scanner is using the latest, most up-to-date signatures

when scanning traffic. The security device can perform these updates automatically (the default), or you can perform pattern update downloads manually.

The database pattern server is accessible through HTTP or HTTPS. By default, the antivirus module checks for database updates automatically every 60 minutes. You can change this interval and you can trigger updates manually, as well. The number of files that are downloaded during an update and the duration of the download process can vary.

A local copy of the pattern database is saved in persistent data storage (that is, the flash disk). If the device is rebooted, the local copy remains available for the antivirus scan engine to use during the antivirus scan engine initialization time, without the need for network access to the pattern database server.

**NOTE:** If the auto-update fails, the updater automatically retries to update three more times. If the database download continues to fail, the updater stops trying and waits for the next periodic update before trying again.

**NOTE:** Once your subscription expires, you have a 30 day grace period during which you can continue to update the antivirus pattern file. Once that grace period expires, the update server no longer permits antivirus pattern file updates.

## Understanding the Full Antivirus Internal Scan Engine

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

The full file-based antivirus module is the software subsystem on the gateway device that scans specific Application Layer traffic to protect users from virus attacks and to prevent viruses from spreading. The antivirus software subsystem consists of a virus signature database, an application proxy, the scan manager, and the scan engine.

Kaspersky Lab provides the scan engine and it works in the following manner:

1. A client establishes a TCP connection with a server and then starts a transaction.
2. If the application protocol in question is marked for antivirus scanning, the traffic is forwarded to an application proxy for parsing.
3. When the scan request is sent, the scan engine scans the data by querying a virus pattern database.
4. The scan manager monitors antivirus scanning sessions, checking the properties of the data content against the existing antivirus settings.
5. After scanning has occurred, the result is then handled by the scan manager.

The Kaspersky Lab scan engine supports regular file scanning and script file scanning. With regular file scanning, the input object is a regular file. The engine matches the input content with all possible signatures. With script file scanning, the input object is a script file. It can be JavaScript, VBScript, mIRC script, bat scripts (DOS bat files), and other text scripts. The engine matches the input content only with signatures for script files. Script scanning is only applicable for HTML content over the HTTP protocol. There are two criteria for this scan type. First, the content-type field of this HTML document must be text or HTML. Second, there is no content encoding in the HTTP header. If those two criteria are met, an HTML parser is used to parse the HTML document for scripts.

## Understanding Full Antivirus Scan Level Settings

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

The antivirus module allows you to configure scanning options on a global level, on a UTM profile level, or on a firewall policy level. Each configuration level has the following implications:

- Global antivirus settings—Settings are applied to all antivirus sessions. Global settings are general overall configurations for the antivirus module or settings that are not specific for profiles.
- Profile-based settings—Antivirus settings are different for different protocols within the same policy.
- Policy-based settings—Antivirus settings are different for different policies. Policy-based antivirus settings are applied to all scan-specified traffic defined in a firewall policy.

The majority of antivirus settings are configured within an antivirus profile, bound to specified protocols, and used by designated policies. These UTM policies are then applied to the traffic according to firewall policies. If a firewall policy with an antivirus setting matches the properties of a traffic flow, the antivirus setting is applied to the traffic session. Therefore, you can apply different antivirus settings for different protocols and for different traffic sessions.

## Understanding Full Antivirus Scan Mode Support

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

The Kaspersky Lab scan engine supports two modes of scanning:

- scan-all—This option tells the scan engine to scan all the data it receives.
- scan-by-extension—This option bases all scanning decisions on the file extensions found in the traffic in question.

When scanning content, you can use a file extension list to define a set of file extensions that are used in file extension scan mode (scan-by-extension). The antivirus module can then scan files with extensions on the scan-extension list. If an extension is not defined in an extension list, the file with that extension is not scanned in scan-by-extension mode. If there is no extension present, the file in question is scanned.

When using a file extension list to scan content, please note the following requirements:

- File extension entries are case-insensitive.
- The maximum length of the file extension list name is 29 bytes.
- The maximum length of each file extension entry is 15 bytes.
- The maximum entry number in a file extension list is 255.

## Understanding Full Antivirus Intelligent Prescreening

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

By default, intelligent prescreening is enabled to improve antivirus scanning performance. The antivirus module generally begins to scan data after the gateway device has received all the packets of a file. Intelligent prescreening tells the antivirus module to begin scanning a file much earlier. In this case, the scan engine uses the first packet or the first several packets to determine if a file could possibly contain malicious code. The scan engine does a quick check on these first packets and if it finds that it is unlikely that the file is infected, it then decides that it is safe to bypass the normal scanning procedure.

**NOTE:** Intelligent prescreening is only intended for use with non-encoded traffic. It is not applicable for MIME encoded traffic, mail protocols (SMTP, POP3, IMAP) and HTTP POST.

## Understanding Full Antivirus Content Size Limits

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

Due to resource constraints, there is a default, device-dependent limit on maximum content size for the database. The content size value is configurable. There is also a lower and upper limit for maximum content size. (This range is device dependent and is not configurable.)

The content size check occurs before the scan request is sent. The exact timing of this is protocol dependent. If the protocol header contains an accurate content length field, the content size check takes place when the content length field is extracted during header parsing. The content size usually refers to file size. If there is no content length field, the size is checked while the antivirus module is receiving packets. The content size, in this case, refers to accumulated TCP payload size.

**NOTE:** This setting can be used in all protocols.

**Related  
Documentation**

## Understanding Full Antivirus Decompression Layer Limits

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

The decompression layer limit specifies how many layers of nested compressed files and files with internal extractable objects, such as archive files (tar), MS Word and PowerPoint files, the internal antivirus scanner can decompress before it executes the virus scan. For example, if a message contains a compressed .zip file that contains another compressed .zip file, there are two compression layers. Decompressing both files requires a decompress layer setting of 2.

It is worth noting that during the transfer of data, some protocols use content encoding. The antivirus scan engine must decode this layer, which is considered a decompression level, before it scans for viruses.

There are three kinds of compressed data:

- compressed file (zip, rar, gzip)
- encoded data (MIME)
- packaged data (OLE, .CAP, .MSI, .TAR, .EML)

A decompression layer could be a layer of a zipped file or an embedded object in packaged data. The antivirus engine scans each layer before unpacking the next layer, until it either reaches the user-configured decompress limit, reaches the device decompress layer limit, finds a virus or other malware, or decompresses the data completely, whichever comes first.

As the virus signature database becomes larger and the scan algorithms become more sophisticated, the scan engine has the ability to look deeper into the data for embedded malware. As a result, it can uncover more layers of compressed data. The Juniper Networks device's level of security is limited by decompress limit, which is based on the memory allocated to the security service. If a virus is not found within the decompress limit, the user has an option to either pass or drop the data.

**NOTE:** This setting can be used in all protocols.

## Understanding Full Antivirus Scanning Timeouts

**Supported Platforms**   [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

The scanning timeout value includes the time frame from when the scan request is generated to when the scan result is returned by the scan engine. The time range can be 1 to 1800 seconds. By default, it is 180 seconds.

**NOTE:** This timeout parameter is used by all supported protocols. Each protocol can have a different timeout value.

**Related  
Documentation**

- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
- [Full Antivirus Protection Overview on page 323](#)

## Understanding Full Antivirus Scan Session Throttling

**Supported Platforms**   [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

In an attempt to consume all available resources and hinder the ability of the scan engine to scan other traffic, a malicious user might generate a large amount of traffic all at once. To prevent such activity from succeeding, a session throttle is imposed for antivirus resources, thereby restricting the amount of traffic a single source can consume at one time. The limit is an integer with 100 as the default setting. This integer refers to the maximum allowed sessions from a single source. You may change this default limit, but understand that if this limit is set high, that is comparable to no limit.

Over-limit is a fallback setting for the connection-per-client limit. The default behavior of over-limit is to block sessions. This is a per-policy setting. You can specify different settings for different UTM policies.

## Understanding Full Antivirus Application Protocol Scanning

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

You can turn antivirus scanning on and off on a per protocol basis. If scanning for a protocol is disabled in an antivirus profile, there is no application intelligence for this protocol. Therefore, in most cases, traffic using this protocol is not scanned. But if the protocol in question is based on another protocol for which scanning is enabled in an antivirus profile, then the traffic is scanned as that enabled protocol.

The internal antivirus scan engine supports scanning for specific Application Layer transactions allowing you to select the content (HTTP, FTP, SMTP, POP3, or IMAP traffic) to scan. For each content type that you are scanning, you have different configuration options.

Profile-based settings, including enable/disable, scan-mode, and scan result handling settings, may not be applicable to all supported protocols. The following table lists profile-based settings and their protocol support.

**Table 9: Supported Profile-based Settings By Protocol**

| Profile Setting                                                                                                  | Protocol Support                   |
|------------------------------------------------------------------------------------------------------------------|------------------------------------|
| Enable or disable scanning on per protocol basis                                                                 | All protocols support this feature |

## Understanding HTTP Scanning

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

If antivirus scanning is enabled for Hypertext Transfer Protocol (HTTP) traffic in a content security profile, TCP traffic to defined HTTP service ports (generally port 80) is monitored. For HTTP traffic, the security device scans both HTTP responses and requests (get, post, and put commands).

**NOTE:** For HTTP antivirus scanning, both HTTP 1.0 and 1.1 are supported. If the protocol version is HTTP 0.x, the antivirus scanner attempts to scan the traffic. Unknown protocols are bypassed. For example, some application protocols use HTTP as the transport but do not comply with HTTP 1.0 or 1.1. These are considered unknown protocols and are not scanned.

This is a general description of how HTTP traffic is intercepted, scanned, and acted upon by the antivirus scanner:

1. An HTTP client sends an HTTP request to a webserver or a webserver responds to an HTTP request.
2. The security device intercepts the request and passes the data to the antivirus scanner, which scans it for viruses.
3. After completing the scan, the device follows one of two courses:
  - If there is no virus, the device forwards the request to the webserver.
  - If there is a virus, the device drops the request and sends an HTTP message reporting the infection to the client.

With script-only scanning, the input object is a script file. It can be JavaScript, VBScript, mIRC script, bat scripts (DOS bat files) and other text scripts. The engine matches the input content only with signatures for script files. Script scanning is applicable only for HTML content over the HTTP protocol. There are two criteria for this scan-type. First, the content-type field of this HTML document must be text or HTML. Second, there is no content encoding in the HTTP header. If those two criteria are met, an HTML parser is used to parse the HTML document.

## Understanding FTP Antivirus Scanning

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

If antivirus scanning is enabled for File Transfer Protocol (FTP) traffic in a content security profile, the security device monitors the control channel and, when it detects one of the FTP commands for transferring data, it scans the data sent over the data channel.

This is a general description of how FTP traffic is intercepted, scanned, and acted upon by the antivirus scanner:

1. A local FTP client opens an FTP control channel to an FTP server and requests the transfer of some data.
2. The FTP client and server negotiate a data channel over which the server sends the requested data. The security device intercepts the data and passes it to the antivirus scan engine, which scans it for viruses.
3. After completing the scan, the device follows one of two courses:
  - If there is no virus, the device forwards the data to the client.
  - If there is a virus, the device replaces the data with a drop message in the data channel and sends a message reporting the infection in the control channel.

- Related Documentation**
- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
  - [Full Antivirus Protection Overview on page 323](#)
  - [Enabling FTP Antivirus Scanning \(CLI Procedure\) on page 379](#)

## Understanding SMTP Antivirus Scanning

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

If SMTP (Simple Mail Transfer Protocol) antivirus scanning is enabled in a content security profile, the security device redirects traffic from local SMTP clients to the antivirus scanner before sending it to the local mail server.

**NOTE:** Chunking is an alternative to the data command. It provides a mechanism to transmit a large message in small chunks. It is not supported. Messages using chunking are bypassed and are not scanned.

This is a general description of how SMTP traffic is intercepted, scanned, and acted upon by the antivirus scanner:

1. An SMTP client sends an e-mail message to a local mail server or a remote mail server forwards an e-mail message via SMTP to the local mail server.
2. The security device intercepts the e-mail message and passes the data to the antivirus scanner, which scans it for viruses.

3. After completing the scan, the device follows one of two courses:
  - If there is no virus, the device forwards the message to the local server.
  - If there is a virus, the device sends a replacement message to the client.

This topic includes the following sections:

- [Understanding SMTP Antivirus Mail Message Replacement on page 334](#)
- [Understanding SMTP Antivirus Sender Notification on page 334](#)
- [Understanding SMTP Antivirus Subject Tagging on page 335](#)

---

### Understanding SMTP Antivirus Mail Message Replacement

If the antivirus scanner finds a virus in an e-mail message, the original message is dropped, the message body is truncated, and the content is replaced by a message that may appear as follows:

```
nContent-Type: text/plain
Your mail <src_ip> : <src_port> — <dst_port>: <dst_port> contains contaminated file
<filename> with virus <virusname>, so it is dropped.
```

If a scan error is returned and the fail mode is set to drop, the original message is dropped and the entire message body is truncated. The content is replaced by a message that may appear as follows:

```
nContent-Type: text/plain
Your mail <src_ip> : <src_port> — <dst_port>: <dst_port> is dropped for <reason>.
```

---

### Understanding SMTP Antivirus Sender Notification

If **notify-sender-on-virus** is set and the message is dropped due to a detected virus, an e-mail is sent to the mail sender. The content of the notification may appear as follows:

```
From: <admin>@<gateway_ip>
To: <sender_e-mail>
Subject: Mail Delivery Failure
This message is created automatically by mail delivery software. A message that you sent
could not be delivered to one or more of its recipients for the reason:
<src_ip> : <src_port> — <dst_port>: <dst_port> <ENVID> contaminated file <filename>
with virus <virusname>.
e-mail Header is:
<header of scanned e-mail>
```

If **notify-sender-on-error-drop** is set and the message is dropped due to a scan error, an e-mail is sent to the mail sender of the scanned message. The content of the e-mail may appear as follows:

```
From: <admin>@<gateway_ip>
To: <sender_e-mail>
Subject: Mail Delivery Failure
This message is created automatically by mail delivery software. A message that you sent
could not be delivered to one or more of its recipients for the reason:
<src_ip> : <src_port> — <dst_port>: <dst_port> <ENVID> <reason>.
e-mail Header is:
<header of scanned e-mail>
```

**NOTE:** For information on the ENVID parameter, refer to RFC 3461.

### Understanding SMTP Antivirus Subject Tagging

If a scan error is returned and the fail mode is set to **pass**, the antivirus module passes the message through to the server. If **notify-recipient-on-error-pass** is set, the following string is appended to the end of the subject field:

(No virus check: <reason>)

#### Related Documentation

### Understanding POP3 Antivirus Scanning

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

If Post Office Protocol 3 (POP3) antivirus scanning is enabled in a content security profile, the security device redirects traffic from a local mail server to antivirus scanner before sending it to the local POP3 client.

This is a general description of how POP3 traffic is intercepted, scanned, and acted upon by the antivirus scanner.

1. The POP3 client downloads an e-mail message from the local mail server.
2. The security device intercepts the e-mail message and passes the data to the antivirus scanner, which scans it for viruses.
3. After completing the scan, the security device follows one of two courses:
  - If there is no virus, the device forwards the message to the client.
  - If there is a virus, the device sends a message reporting the infection to the client.

**NOTE:** See [“Understanding Protocol-Only Virus-Detected Notifications” on page 342](#) for information on protocol-only notifications for IMAP.

This topic includes the following sections:

- [Understanding POP3 Antivirus Mail Message Replacement on page 336](#)
- [Understanding POP3 Antivirus Sender Notification on page 336](#)
- [Understanding POP3 Antivirus Subject Tagging on page 336](#)

### Understanding POP3 Antivirus Mail Message Replacement

---

If the antivirus scanner finds a virus in an e-mail message, the original message is dropped, the message body is truncated, and the content is replaced by a message that may appear as follows:

```
nContent-Type: text/plain
Your mail <src_ip> : <src_port> — <dst_port>: <dst_port> contains contaminated file
<filename> with virus <virusname>, so it is dropped.
```

### Understanding POP3 Antivirus Sender Notification

---

If **notify-sender-on-virus** is set and the message is dropped due to a detected virus, an e-mail is sent to the mail sender.

```
From: <admin>@<gateway_ip>
To: <sender_e-mail>
Subject: Mail Delivery Failure
This message is created automatically by mail delivery software. A message that you sent
could not be delivered to one or more of its recipients for the reason:
<src_ip> : <src_port> — <dst_port>: <dst_port> contaminated file <filename> with virus
<virusname>.
e-mail Header is:
<header of scanned e-mail>
```

If **notify-sender-on-error-drop** is set and the message is dropped due to a scan error, an e-mail is sent to the mail sender of the scanned message. The content of the e-mail may appear as follows:

```
From: <admin>@<gateway_ip>
To: <sender_e-mail>
Subject: Mail Delivery Failure
This message is created automatically by mail delivery software. A message that you sent
could not be delivered to one or more of its recipients for the reason:
<src_ip> : <src_port> — <dst_port>: <dst_port> <reason>.
e-mail Header is:
<header of scanned e-mail>
```

### Understanding POP3 Antivirus Subject Tagging

---

If a scan error is returned and the fail mode is set to **pass**, the antivirus module passes the message through to the server. If **notify-recipient-on-error-pass** is set, the following string is appended to the end of subject field:

```
(No virus check: <reason>)
```

## Understanding IMAP Antivirus Scanning

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX650

If IMAP (Internet Message Access Protocol) antivirus scanning is enabled in a content security profile, the security device redirects traffic from a local mail server to the internal antivirus scanner before sending it to the local IMAP client.

This is a general description of how IMAP traffic is intercepted, scanned, and acted upon by the antivirus scanner.

1. The IMAP client downloads an e-mail message from the local mail server.
2. The security device intercepts the e-mail message and passes the data to the antivirus scanner, which scans it for viruses.
3. After completing the scan, the security device follows one of two courses:
  - If there is no virus, the device forwards the message to the client.
  - If there is a virus, the device sends a message reporting the infection to the client.

**NOTE:** See “[Understanding Protocol-Only Virus-Detected Notifications](#)” on page 342 for information on protocol-only notifications for IMAP.

This topic includes the following sections:

- [Understanding IMAP Antivirus Mail Message Replacement on page 337](#)
- [Understanding IMAP Antivirus Sender Notification on page 337](#)
- [Understanding IMAP Antivirus Subject Tagging on page 338](#)
- [Understanding IMAP Antivirus Scanning Limitations on page 338](#)

### [Understanding IMAP Antivirus Mail Message Replacement](#)

If the antivirus scanner finds a virus in an e-mail message, the original message is dropped, the message body is truncated, and the content is replaced by a message that may appear as follows:

```
nContent-Type: text/plain
Your mail <src_ip> : <src_port> — <dst_port>: <dst_port> contains contaminated file
<filename> with virus <virusname>, so it is dropped.
```

### [Understanding IMAP Antivirus Sender Notification](#)

If **notify-sender-on-virus** is set and the message is dropped due to a detected virus, an e-mail is sent to the mail sender.

```
From: <admin>@<gateway_ip>
To: <sender_e-mail>
Subject: Mail Delivery Failure
This message is created automatically by mail delivery software. A message that you sent
could not be delivered to one or more of its recipients for the reason:
<src_ip> : <src_port> — <dst_port>: <dst_port> contaminated file <filename> with virus
<virusname>.
e-mail Header is:
<header of scanned e-mail>
```

If **notify-sender-on-error-drop** is set and the message is dropped due to a scan error, an e-mail is sent to the mail sender of the scanned message. The content of the e-mail may appear as follows:

```
From: <admin>@<gateway_ip>
To: <sender_e-mail>
Subject: Mail Delivery Failure
This message is created automatically by mail delivery software. A message that you sent
could not be delivered to one or more of its recipients for the reason:
<src_ip> : <src_port> — <dst_port>: <dst_port> <reason>.
e-mail Header is:
<header of scanned e-mail>
```

---

### Understanding IMAP Antivirus Subject Tagging

If a scan error is returned and the fail mode is set to **pass**, the antivirus module passes the message through to the server. If **notify-recipient-on-error-pass** is set, the following string is appended to the end of subject field:

(No virus check: <reason>)

---

### Understanding IMAP Antivirus Scanning Limitations

**Mail Fragments** — It is possible to chop one e-mail into multiple parts and to send each part through a different response. This is called mail fragmenting and most popular mail clients support it in order to send and receive large e-mails. Scanning of mail fragments is not supported by the antivirus scanner and in such cases, the message body is not scanned.

**Partial Content** — Some mail clients treat e-mail of different sizes differently. For example, small e-mails (less than 10 KB) are downloaded as a whole. Large e-mails (for example, less than 1 MB) are chopped into 10 KB pieces upon request from the IMAP server. Scanning of any partial content requests is not supported by the antivirus scanner.

**IMAP Uploads** — Only antivirus scanning of IMAP downloads is supported. IMAP upload traffic is not scanned.

## Whitelists

- [Understanding MIME Whitelists on page 338](#)
- [Understanding URL Whitelists on page 339](#)

### Understanding MIME Whitelists

**Supported Platforms**    **SRX100, SRX110, SRX210, SRX220, SRX240, SRX650**

The gateway device uses MIME (Multipurpose Internet Mail Extension) types to decide which traffic may bypass antivirus scanning. The MIME whitelist defines a list of MIME types and can contain one or many MIME entries.

A MIME entry is case-insensitive. An empty MIME is an invalid entry and should never appear in the MIME list. If the MIME entry ends with a / character, prefix matching takes place. Otherwise, exact matching occurs.

There are two types of MIME lists used to configure MIME type antivirus scan bypassing:

- **mime-whitelist list**—This is the comprehensive list for those MIME types that can bypass antivirus scanning.
- **exception list**—The exception list is a list for excluding some MIME types from the mime-whitelist list. This list is a subset of MIME types found in the mime-whitelist.

For example, if the mime-whitelist includes the entry **video/** and the exception list includes the entry **video/x-shockwave-flash**, by using these two lists, you can bypass objects with “video/” MIME type but not bypass “video/x-shockwave-flash” MIME type.

You should note that there are limits for mime-whitelist entries as follows:

- The maximum number of MIME items in a MIME list is 50.
- The maximum length of each MIME entry is restricted to 40 bytes.
- The maximum length of a MIME list name string is restricted to 40 bytes.

#### Related Documentation

- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- [Full Antivirus Protection Overview on page 323](#)
- [Example: Configuring MIME Whitelists to Bypass Antivirus Scanning on page 380](#)
- [Understanding URL Whitelists on page 339](#)
- [Configuring URL Whitelists to Bypass Antivirus Scanning \(CLI Procedure\) on page 381](#)

## Understanding URL Whitelists

**Supported Platforms**    **SRX100, SRX110, SRX210, SRX220, SRX240, SRX650**

A URL whitelist is a unique custom list that you define in which all the URLs or IP addresses in that list for a specified category are always bypassed for scanning. Because antivirus scanning is CPU and memory intensive action, if there are URLs or IP addresses that you are sure do not require scanning, you might want to create this custom list and add them to it.

#### Related Documentation

- *UTM Full Antivirus Protection Feature Guide for Security Devices*

## HTTP Trickling

---

- [Understanding HTTP Trickling on page 340](#)

### Understanding HTTP Trickling

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

HTTP trickling is a mechanism used to prevent the HTTP client or server from timing-out during a file transfer or during antivirus scanning. On some slow link transferring, a large file could timeout if too much time is taken for the antivirus scanner to scan a complex file.

HTTP trickling is the forwarding of specified amounts of unscanned HTTP traffic to the requesting HTTP client to prevent the browser window from timing out while the scan manager examines downloaded HTTP files. (The security device forwards small amounts of data in advance of transferring an entire scanned file.)

HTTP Trickling is time-based and there is only one parameter, the time-out interval, to configure for this feature. By default, trickling is disabled.

**NOTE:** The timeout based trickling is packet driven. This means, if no packet is received within a certain time frame, HTTP trickling is discontinued. This setting is only supported for HTTP connections.

## Scan Results and Fallback Options

---

- [Understanding Full Antivirus Scan Result Handling on page 340](#)
- [Understanding Antivirus Scanning Fallback Options on page 341](#)

### Understanding Full Antivirus Scan Result Handling

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

Different antivirus scan results are handled in different manners. For example, if a scan result is clean, the traffic is forwarded to the receiver. If the scan result is infected, the traffic is dropped. If the scan results in an error, the result handling depends on the cause of the failure and the configuration (fallback settings).

The following is a list of actions based on scan results:

- Scan Result = Pass

The scan result handling action is to pass the message. In this case, no virus is detected and no error code is returned. Or, an error code is returned, but the fallback option for this error code is set to log-and-permit.

- Scan Result = Block

The scan result handling action is to block the message. In this case, either a virus is detected or an error code is returned and the fallback option for this error code is BLOCK.

#### Related Documentation

- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
- [Full Antivirus Protection Overview on page 323](#)
- [Understanding Full Antivirus Scan Level Settings on page 326](#)

## Understanding Antivirus Scanning Fallback Options

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

Fallback options tell the system how to handle the errors returned by either the scan engine or the scan manager. The following is a list of possible errors:

- Scan engine is not ready (engine-not-ready)

The scan engine is initializing itself, for example, loading the signature database. During this phase, it is not ready to scan a file. A file could either pass or be blocked according to this setting.

- Corrupt file (corrupt-file)

Corrupt file is the error returned by the scan engine when engine detects a corrupted file.

- Decompression layer (decompress-layer)

Decompress layer error is the error returned by the scan engine when the scanned file has too many compression layers.

- Password protected file (password-file)

Password protected file is the error returned by the scan engine when the scanned file is protected by a password.

- Max content size (content-size)

If the content size exceeds a set limit, the content is passed or blocked depending on the max-content-size fallback option.

- Too many requests (too-many-requests)

If the total number of messages received concurrently exceeds the device limits, the content is passed or blocked depending on the too-many-request fallback option. (The allowed request limit is not configurable.)

- Timeout

Scanning a complex file could consume resources and time. If the time it is taking to scan exceeds the timeout setting in the antivirus profile, the processing is aborted and the content is passed or blocked without completing the virus checking. The decision is made based on the timeout fallback option.

- Out of resources (out-of-resources)

Virus scanning requires a great deal of memory and CPU resources. Due to resource constraints, memory allocation requests can be denied by the system. This failure could be returned by either scan engine (as a scan-code) or scan manager. When out-of-resources occurs, scanning is aborted.

- Default

All the errors other than those in the above list fall into this category. This could include either unhandled system exceptions (internal errors) or other unknown errors.

The default fallback action for all the error types is log-and-permit.

## Notifications

- [Understanding Protocol-Only Virus-Detected Notifications on page 342](#)
- [Understanding E-Mail Virus-Detected Notifications on page 343](#)
- [Understanding Custom Message Virus-Detected Notifications on page 343](#)

## Understanding Protocol-Only Virus-Detected Notifications

**Supported Platforms**   [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

When content is blocked because a virus is found or a scan error occurs, the client generally still receives a successful response code but with modified content (file replacement) containing a warning message. But with protocol-only notifications, a protocol-specific error code may be returned to the client. This way, the client determines that a virus was detected rather than interpreting that a file transfer succeeded.

**Related  
Documentation**

- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
- [Full Antivirus Protection Overview on page 323](#)
- [Configuring Protocol-Only Virus-Detected Notifications \(CLI Procedure\) on page 382](#)

## Understanding E-Mail Virus-Detected Notifications

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

For mail protocols (SMTP, POP3, IMAP), e-mail notification is used to notify the sender or the recipient about the detected viruses or the scanning errors. There are three settings for e-mail notifications:

- **virus-detection/notify-mail-sender** — This setting is used when a virus is detected. If it is enabled, an e-mail is sent to the sender upon virus detection.
- **fallback-block/notify-mail-sender** — This setting is used when other scan codes or scanning errors are returned and the message is dropped. If it is enabled, an e-mail is sent to the sender when an error code is returned.
- **fallback-non-block/notify-mail-recipient** — This setting is used when other scan codes or scanning errors are returned and the message is passed. If it is enabled, the e-mail sent to the recipient is tagged when an error code is returned.

**Related  
Documentation**

- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
- [Full Antivirus Protection Overview on page 323](#)
- [Configuring E-Mail Virus-Detected Notifications \(CLI Procedure\) on page 382](#)

## Understanding Custom Message Virus-Detected Notifications

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX650](#)

Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file. When using custom messages, you can provide a customized message in the message content you can define customized subject tags.

**NOTE:** Custom-message in fallback-nonblock is used only by mail protocols.

### Full Antivirus Protection

---

- [Full Antivirus Configuration Overview on page 345](#)
- [Full Antivirus Pattern Update Configuration Overview on page 346](#)
- [Example: Configuring Full Antivirus Custom Objects on page 347](#)
- [Example: Configuring Full Antivirus Feature Profiles on page 350](#)
- [Example: Configuring Full Antivirus UTM Policies on page 356](#)
- [Example: Attaching Full Antivirus UTM Policies to Security Policies on page 357](#)

### Full Antivirus Configuration Overview

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

When configuring antivirus protection, you must first create the antivirus custom objects you are using. Those custom objects may include the MIME pattern list, MIME exception list, and the filename extension list. Once you have created your custom objects, you can configure full antivirus protection, including intelligent prescreening, and content size limits.

To configure full file-based antivirus protection:

1. Configure UTM custom objects for the UTM feature. The following example enables the mime-pattern, filename-extension, url-pattern, and custom-url-category custom-objects:

```
user@host# set security utm custom-objects mime-pattern
user@host# set security utm custom-objects filename-extension
user@host# set security utm custom-objects url-pattern
user@host# set security utm custom-objects custom-url-category
```

2. Configure the main feature parameters using feature profiles. The following example enables options using the anti virus feature profile:

```
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine
pattern-update
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
fallback-options
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
notification-options
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
scan-options
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
trickling
user@host# set security utm feature-profile anti-virus mime-whitelist
user@host# set security utm feature-profile anti-virus url-whitelist
```

3. Configure a UTM policy for each protocol and attach this policy to a profile. The following example configure the utmp2 UTM policy for the HTTP protocol:

```
user@host# set security utm utm-policy utmp2 anti-virus http-profile http1
```

4. Attach the UTM policy to a security policy. The following example attaches the utmp2 UTM policy to the p2 security policy:

```
user@host# set security policies from-zone trust to-zone untrust policy p2 then permit
application-services utm-policy utmp2
```

#### Related Documentation

- *Configuring Full Antivirus (J-Web Procedure)*

## Full Antivirus Pattern Update Configuration Overview

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

Before you begin, there are several prerequisites that must be met in order to perform a successful pattern database update:

- You must have a valid antivirus scanner license.
- You must have network connectivity and access to the pattern database server.
- Your DNS settings and port settings (port 80) must be correct.

To update the patterns for the antivirus signature database:

1. On the security device, specify the URL address of the pattern-update server.
2. (Optional) Specify how often the device should automatically check for pattern-server updates.

After the security device downloads the server-initialization file, the device checks that the pattern file is valid. The device then parses the file to obtain information about it, including the file version, size, and location of the pattern file server.

If the pattern file on the security device is out-of-date (or nonexistent because this is the first time you are loading it), and, if the antivirus pattern-update service subscription is still valid, the device automatically retrieves an updated pattern file from the pattern file server.

The following is an example of the CLI for configuring the database update feature:

```
utm {
  feature-profile {
    anti-virus {
      type
        kaspersky-lab-engine {
          pattern-update
            url url
            interval minutes
          }
        }
      }
    }
```

#### Related Documentation

## Example: Configuring Full Antivirus Custom Objects

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

This example shows how to configure full antivirus custom objects.

- [Requirements on page 348](#)
- [Overview on page 348](#)

- [Configuration on page 348](#)
- [Verification on page 350](#)

---

## Requirements

Before you begin:

- Decide the type of full antivirus protection you require. See “[Full Antivirus Protection Overview](#)” on page 323.
- Understand the order in which full antivirus parameters are configured. See “[Full Antivirus Pattern Update Configuration Overview](#)” on page 346.

---

## Overview

In this example, you define custom objects that are used to create full antivirus feature profiles. You perform the following tasks to define custom objects:

1. Configure a filename extension list called `extlist1` and add extensions such as `.zip`, `.js`, and `.vbs` to the list.
2. Create two MIME lists called `avmime1` and `ex-avmime1` and add patterns to the list.
3. Configure a URL pattern list called `urllist1`.
4. Configure a custom URL category list called `custurl1` using the `urllist1` URL pattern list.

---

## Configuration

### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm custom-objects filename-extension extlist1 value [zip js vbs]
set security utm custom-objects mime-pattern avmime1 value [video/quicktime
image/x-portable-anymap x-world/x-vrml]
set security utm custom-objects mime-pattern ex-avmime1 value
[video/quicktime-inappropriate]
set security utm custom-objects url-pattern urllist1 value [http://www.url.com 5.6.7.8]
set security utm custom-objects custom-url-category custurl1 value urllist1
```

### Step-by-Step Procedure

The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure full antivirus filtering custom objects:

1. Configure the filename extension list and add extensions to it.  

```
[edit security utm]
user@host# set custom-objects filename-extension extlist1 value [zip js vbs]
```

**NOTE:** The Kaspersky scan engine ships with a read-only default extension list that you can use.

2. Create MIME lists and add MIME patterns to the lists.

```
[edit security utm]
user@host# set custom-objects mime-pattern avmime1 value [video/quicktime
image/x-portable-anymap x-world/x-vrml]
user@host# set custom-objects mime-pattern ex-avmime1 value
[video/quicktime-inappropriate]
```

3. Configure a URL pattern list.

```
[edit security utm]
user@host# set custom-objects url-pattern urllist1 value [http://www.url.com
5.6.7.8]
```

When entering the URL pattern, note the following wildcard character support:

- The \\*\.[]\?\* wildcard characters are supported.
- You must precede all wildcard URLs with http://.
- You can only use the asterisk \* wildcard character if it is at the beginning of the URL and is followed by a period.
- You can only use the question mark ? wildcard character at the end of the URL.
- The following wildcard syntax is supported: http://\*example.net, http://www.example.ne?, http://www.example.n??.
- The following wildcard syntax is not supported: \*example.net, www.example.ne?, http://\*example.net, http://\*.

**NOTE:** Because you use URL pattern lists to create custom URL category lists, you must configure URL pattern list custom objects before you configure custom URL category lists.

4. Configure a custom URL category list.

```
[edit security utm]
user@host# set custom-objects custom-url-category custurl1 value urllist1
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost# show security utm
custom-objects {
  mime-pattern {
    avmime1 {
```

```
        value [ video/quicktime image/x-portable-anymap x-world/x-vrml ];
    }
    ex-avmime1 {
        value video/quicktime-inappropriate;
    }
}
filename-extension {
    extlist1 {
        value [ zip js vbs ];
    }
}
url-pattern {
    urlist1 {
        value [ http://www.url.com 5.6.7.8 ];
    }
}
custom-url-category {
    custurl1 {
        value urlist1;
    }
}
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying Full Antivirus Custom Objects on page 350](#)

#### *Verifying Full Antivirus Custom Objects*

**Purpose** Verify the full antivirus custom objects.

**Action** From operational mode, enter the **show configuration security utm** command.

**Related Documentation**

- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
- [Example: Configuring Full Antivirus Feature Profiles on page 350](#)
- [Configuring Full Antivirus Feature Profiles \(J-Web Procedure\) on page 361](#)

### Example: Configuring Full Antivirus Feature Profiles

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

This example shows how to configure a full antivirus feature profile.

- [Requirements on page 351](#)
- [Overview on page 351](#)
- [Configuration on page 352](#)
- [Verification on page 356](#)

## Requirements

Before you begin:

- Decide the type of full antivirus protection you require. See [“Full Antivirus Protection Overview” on page 323](#).
- Understand the order in which full antivirus parameters are configured. See [“Full Antivirus Configuration Overview” on page 345](#).
- MIME patterns must be defined for lists and exception lists. See [“Example: Configuring MIME Whitelists to Bypass Antivirus Scanning” on page 380](#).

## Overview

In this example, you configure a feature profile called `kasprof1` and specify custom objects to be used for filtering content:

- Select and configure the engine type as Kaspersky Lab Engine.
- Select 120 as the time interval for updating the pattern database. The default full file-based antivirus pattern-update interval is 60 minutes.

**NOTE:** The command for changing the URL for the pattern database is:

[edit]

```
user@host# edit security utm feature-profile anti-virus kaspersky-lab-engine
```

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]
```

```
user@host# set pattern-update url http://.
```

The default URL is `http://update.juniper-updates.net/AV/<device-version>`. You should not change this URL unless you are experiencing problems with it and have called for support.

- Enable an e-mail notification with a custom message as pattern file was updated and a custom subject line as AV pattern file updated.
- Configure a list of fallback options as block.
- Configure the notification options for fallback blocking for virus detection. Configure a custom message for the fallback blocking action.
- Configure a notification for protocol-only virus detection.
- Configure scan options. For this example, configure the device to perform a TCP payload content size check before the scan request is sent.
- Configure the decompression layer limit. For this example configure the device to decompress three layers of nested compressed files before it executes the virus scan.
- Configure content size parameters as 20000.

**NOTE:** For SRX100, SRX110, SRX210, SRX220, and SRX240 devices the content size is 20000. For SRX650 devices the content size is 40,000.

- Configure scan extension settings. The default list is junos-default-extension. For this example, you select extlist1, which you created as a custom object.
- Configure the scan mode setting to configure the device to use a custom extension list. Although you can choose to scan all files, for this example you select only files with the extensions that you specify.
- Enable intelligent prescreening and set its timeout setting to 1800 seconds and trickling setting (applicable only to HTTP) to 600 seconds. This means that if the device receives a packet within a 600-second period during a file transfer or while performing an antivirus scan, it should not time out.

**NOTE:** Intelligent prescreening is only intended for use with non-encoded traffic. It is not applicable for mail protocols (SMTP, POP3, IMAP) and HTTP POST.

The following example disables intelligent prescreening for the kasprof1 profile:

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]
user@host# set profile kasprof1 scan-options no-intelligent-prescreening
```

- Configure the antivirus scanner to use MIME bypass lists and exception lists. You can use your own custom object lists, or you can use the default list that ships with the device called junos-default-bypass-mime. For this example, you use the avmime1 and ex-avmime1 lists.
- Configure the antivirus module to use URL bypass lists. If you are using a URL whitelist (valid only for HTTP traffic), this is a custom URL category that you have previously configured as a custom object. For this example, you enable the custurl1 bypass list.

## Configuration

### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile anti-virus type kaspersky-lab-engine
set security utm feature-profile anti-virus kaspersky-lab-engine pattern-update interval
  120
set security utm feature-profile anti-virus kaspersky-lab-engine pattern-update
  email-notify admin-email administrator@example.net custom-message
    patternfilewasupdated custom-message-subject AVpatternfileupdated
set security utm feature-profile anti-virus type kaspersky-lab-engine
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options content-size block
```

```

set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options corrupt-file block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options decompress-layer block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options default block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options engine-not-ready block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options out-of-resources block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options password-file block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options timeout block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options too-many-requests block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  notification-options fallback-block custom-message "Dropped due to fallback settings"
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  notification-options virus-detection type protocol-only
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  scan-options content-size-limit 20000
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  scan-options decompress-layer-limit 3
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  scan-options intelligent-prescreening
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  scan-options scan-extension extlist1
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  scan-options scan-mode by-extension
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  scan-options timeout 1800
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1 trickling
  timeout 600
set security utm feature-profile anti-virus mime-whitelist list avmime1
set security utm feature-profile anti-virus mime-whitelist list avmime1 exception
  ex-avmime1
set security utm feature-profile anti-virus url-whitelist custurl1

```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure full antivirus feature profiles:

1. Select and configure the engine type.  

```

[edit]
user@host# set security utm feature-profile anti-virus type kaspersky-lab-engine
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine
  pattern-update interval 120

```
2. Configure the device to notify a specified administrator when patterns are updated.  

```

[edit security utm feature-profile anti-virus kaspersky-lab-engine]

```

```
user@host# set pattern-update email-notify admin-email  
administrator@example.net custom-message patternfilewasupdated  
custom-message-subject AVpatternfileupdated
```

3. Create a profile for the Kaspersky Lab engine and configure fallback options as block.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 fallback-options content-size block  
user@host# set profile kasprof1 fallback-options corrupt-file block  
user@host# set profile kasprof1 fallback-options decompress-layer block  
user@host# set profile kasprof1 fallback-options default block  
user@host# set profile kasprof1 fallback-options engine-not-ready block  
user@host# set profile kasprof1 fallback-options out-of-resources block  
user@host# set profile kasprof1 fallback-options password-file block  
user@host# set profile kasprof1 fallback-options timeout block  
user@host# set profile kasprof1 fallback-options too-many-requests block
```

4. Configure a custom notification for the fallback blocking action and send a notification.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 notification-options fallback-block custom-message  
"Dropped due to fallback settings"
```

5. Configure a notification for protocol-only virus detection.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 notification-options virus-detection type  
protocol-only
```

6. Configure content size parameter.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 scan-options content-size-limit 20000
```

7. Configure the decompression layer limit.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 scan-options decompress-layer-limit 3
```

8. Configure intelligent prescreening.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 scan-options intelligent-prescreening
```

9. Configure scan extension setting.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 scan-options scan-extension extlist1
```

10. Configure the scan mode setting.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 scan-options scan-mode by-extension
```

11. Configure the timeout setting.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
user@host# set profile kasprof1 scan-options timeout 1800
```

12. Configure trickling setting.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]
user@host# set profile kasprof1 trickling timeout 600
```

13. Configure the antivirus scanner to use MIME bypass lists and exception lists.

```
[edit security utm feature-profile anti-virus]
user@host# set mime-whitelist list avmime1
user@host# set mime-whitelist list avmime1 exception ex-avmime1
```

14. Configure the antivirus module to use URL bypass lists.

```
[edit security utm feature-profile anti-virus]
user@host# set url-whitelist custurl1
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm feature-profile anti-virus** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
user@host# show security utm feature-profile anti-virus
mime-whitelist {
  list avmime1;
  exception ex-avmime1;
}
url-whitelist custurl1;
kaspersky-lab-engine {
  pattern-update {
    email-notify {
      admin-email "administrator@example.net";
      custom-message patternfilewasupdated;
      custom-message-subject AVpatternfileupdated;
    }
    interval 120;
  }
  profile kasprof1 {
    fallback-options {
      default block;
      corrupt-file block;
      password-file block;
      decompress-layer block;
      content-size block;
      engine-not-ready block;
      timeout block;
      out-of-resources block;
      too-many-requests block;
    }
    scan-options {
      intelligent-prescreening;
      scan-mode by-extension;
      scan-extension extlist1;
      content-size-limit 20000;
      timeout 1800;
      decompress-layer-limit 3;
    }
    trickling timeout 600;
    notification-options {
```

```
        virus-detection {
            type protocol-only;
            custom-message ***virus-found***;
        }
        fallback-block {
            custom-message "Dropped due to fallback settings";
        }
    }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying the Configuration of Full Antivirus Feature Profile on page 356](#)

#### *Verifying the Configuration of Full Antivirus Feature Profile*

**Purpose** Verify the full antivirus feature profile.

**Action** From operational mode, enter the **show configuration security utm** command.

- Related Documentation**
- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
  - [Full Antivirus Configuration Overview on page 345](#)
  - [Example: Configuring Full Antivirus UTM Policies on page 356](#)
  - [Example: Attaching Full Antivirus UTM Policies to Security Policies on page 357](#)

## Example: Configuring Full Antivirus UTM Policies

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

This example shows how to create a UTM policy to attach to a feature profile.

- [Requirements on page 356](#)
- [Overview on page 356](#)
- [Configuration on page 357](#)
- [Verification on page 357](#)

---

### Requirements

Before you begin, create an antivirus feature profile. See [“Example: Configuring Full Antivirus Feature Profiles” on page 350](#).

---

### Overview

In this example, you configure a full antivirus UTM policy called utmp2 and attach the policy to an HTTP profile called kasprofile1 HTTP.

## Configuration

### Step-by-Step Procedure

To configure a full antivirus UTM policy:

1. Create a UTM policy for HTTP antivirus scanning and attach the policy to the profile.

[edit]

```
user@host# set security utm utm-policy utmp2 anti-virus http-profile kasprofile1
```

2. If you are done configuring the device, commit the configuration.

[edit]

```
user@host# commit
```

## Verification

To verify the configuration is working properly, enter the **show security utm** command.

### Related Documentation

## Example: Attaching Full Antivirus UTM Policies to Security Policies

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

This example shows how to attach a UTM policy to a security policy.

- [Requirements on page 357](#)
- [Overview on page 357](#)
- [Configuration on page 357](#)
- [Verification on page 358](#)

## Requirements

Before you begin, create a UTM policy. See “[Example: Configuring Full Antivirus UTM Policies](#)” on page 356.

## Overview

In this example, you attach the UTM policy called utmp2 to the security policy called p2.

## Configuration

### Step-by-Step Procedure

To attach a full antivirus UTM policy to a security policy:

1. Enable and configure the security policy.

[edit]

```
user@host# set security policies from-zone trust to-zone untrust policy p2 match
source-address any
```

```
user@host# set security policies from-zone trust to-zone untrust policy p2 match
destination-address any
user@host# set security policies from-zone trust to-zone untrust policy p2 match
application junos-http
```

2. Attach the UTM policy to the security policy.

```
[edit]
user@host# set security policies from-zone trust to-zone untrust policy p2 then
permit application-services utm-policy utmp2
```

3. If you are done configuring the device, commit the configuration.

```
[edit]
user@host# commit
```

---

### Verification

To verify the configuration is working properly, enter the **show security policies** command.

## Full Antivirus Protection (J-Web)

- [Configuring Full Antivirus Custom Objects \(J-Web Procedure\) on page 358](#)
- [Configuring Full Antivirus Feature Profiles \(J-Web Procedure\) on page 361](#)
- [Configuring Full Antivirus UTM Policies \(J-Web Procedure\) on page 364](#)
- [Attaching Full Antivirus UTM Policies to Security Policies \(J-Web Procedure\) on page 365](#)

### Configuring Full Antivirus Custom Objects (J-Web Procedure)

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To configure antivirus protection, you must first create your custom objects (MIME Pattern List, Filename Extension List, URL Pattern List, and Custom URL Category List).

Configure a MIME pattern list custom object:

1. Select **Configure>Security>UTM>Custom Objects**.
2. From the MIME Pattern List tab, click the **Add** button to create MIME pattern lists.
3. In the Add MIME Pattern pop-up window, next to **MIME Pattern Name**, enter a unique name.

**NOTE:** Keep in mind that you are creating a MIME whitelist and a MIME exception list (if necessary). Both MIME lists appear in the MIME Whitelist and Exception MIME Whitelist fields when you configure antivirus. Therefore, the MIME list names you create should be as descriptive as possible.

4. Next to **MIME Pattern Value**, enter the MIME pattern.
5. Click **Add** to add your MIME pattern to the Values list box. Within this box, you can also select an entry and use the Delete button to delete it from the list. Continue to add MIME patterns in this manner.
6. Optionally, create a new MIME list to act as an exception list. The exception list is generally a subset of the main MIME list.
7. Click **OK** to check your configuration and save the selected values as part of the MIME list, then click **Commit Options>Commit**.
8. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

Configure a filename extension list custom object:

1. Select **Configure>Security>UTM>Custom Objects**.
2. From the Filename Extension List tab, click the **Add** button to create filename extension lists.
3. Next to **File Extension Name**, enter a unique name. This name appears in the Scan Option By Extension list when you configure an antivirus profile.
4. In the **Available Values** box, select one or more default values (press Shift to select multiple concurrent items or press Ctrl to select multiple separate items) and click the right arrow button to move the value or values to the Selected Values box.
5. Click **OK** to check your configuration and save it as a candidate configuration, then click **Commit Options>Commit**.
6. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If the profile is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

Configure a URL pattern list custom object:

**NOTE:** Because you use URL pattern lists to create custom URL category lists, you must configure URL pattern list custom objects before you configure a custom URL category list.

1. Select **Configure>Security>UTM>Custom Objects**.
2. From the URL Pattern List tab, click the **Add** button to create URL pattern lists.

3. Next to **URL Pattern Name**, enter a unique name. This name appears in the Custom URL Category List Custom Object page for selection.
4. Next to **URL Pattern Value**, enter the URL or IP address you want added to the list for bypassing scanning.

When entering the URL pattern, note the following wildcard character support:

- The `\*\.[]\?` wildcard characters are supported.
  - You must precede all wildcard URLs with `http://`.
  - You can only use the asterisk `*` wildcard character if it is at the beginning of the URL and is followed by a period.
  - You can only use the question mark `?` wildcard character at the end of the URL.
  - The following wildcard syntax IS supported: `http://*.example.net`, `http://www.example.ne?`, `http://www.example.n??`.
  - The following wildcard syntax is NOT supported: `*example.net`, `www.example.ne?`, `http://*example.net`, `http://*`.
5. Click **Add** to add your URL pattern to the Values list box. The list can contain up to 8192 items. You can also select an entry and use the Delete button to delete it from the list. Continue to add URLs or IP addresses in this manner.
  6. Click **OK** to check your configuration and save the selected values as part of the URL pattern list you have created, then click **Commit Options>Commit**.
  7. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

Configure a custom URL category list custom object:

**NOTE:** Because you use URL Pattern Lists to create custom URL category lists, you must configure URL pattern list custom objects before you configure a custom URL category list.

1. Select **Configure>Security>UTM>Custom Objects**.
2. In the URL Category List tab, click **Add** to create URL category lists.
3. Next to **URL Category Name**, enter a unique name. This name appears in the URL Whitelist list when you configure antivirus global options.
4. In the **Available Values** box, select a URL Pattern List name from the list for bypassing scanning and click the right arrow button to move it to the Selected Values box.
5. Click **OK** to check your configuration and save the selected values as part of the URL list that you have created, then click **Commit Options>Commit**.

Click **OK** to save the selected values as part of the custom URL list you have created.

6. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

**Related  
Documentation**

- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)
- [Full Antivirus Protection Overview on page 323](#)
- [Configuring Full Antivirus Feature Profiles \(J-Web Procedure\) on page 361](#)

## Configuring Full Antivirus Feature Profiles (J-Web Procedure)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

After you have created your custom object, configure an antivirus feature profile:

1. Select **Configure>Security>UTM>Global options**.
2. In the Anti-Virus tab, next to **MIME whitelist**, select the custom object you created from the list.
3. Next to **Exception MIME whitelist**, select the custom object you created from the list.
4. Next to **URL Whitelist**, select the custom object you created from the list.
5. In the **Engine Type** section, select the type of engine you are using. For full antivirus protection, you should select **Kaspersky Lab**.
6. In the Kaspersky Lab Engine Option section, in the **Pattern update URL** box, enter the URL for the pattern database.

**NOTE:** The URL is <http://update.juniper-updates.net/AV/<device version>> and you should not change it.

7. Next to **Pattern update interval**, enter the time interval, in seconds, for automatically updating the pattern database in the box. The default interval is 60.
8. Select whether you want the pattern file to update automatically (**Auto update**) or not (**No Auto update**).
9. Click **OK** to save the selected values.
10. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in a pop-up window that appears to discover why.
11. Under Security, in the left pane, select **Anti-Virus**.
12. In the right window, click **Add** to create a profile for the antivirus Kaspersky Lab Engine. (To edit an existing item, select it and click the **Edit** button.)
13. Next to **Profile name**, enter a unique name for this antivirus profile.

14. Select the **Profile Type**. In this case, select **Kaspersky**.

15. Next to **Trickling timeout**, enter timeout parameters.

**NOTE:** Trickling applies only to HTTP. HTTP trickling is a mechanism used to prevent the HTTP client or server from timing out during a file transfer or during antivirus scanning.

16. Next to Intelligent prescreening, select **Yes** or **No**.

**NOTE:** Intelligent prescreening is only intended for use with non-encoded traffic. It is not applicable for mail protocols (SMTP, POP3, IMAP, and HTTP POST).

17. In the Scan Options section, next to Intelligent prescreening, select **Yes** if you are using it.

**NOTE:** Intelligent prescreening is only intended for use with non-encoded traffic. It is not applicable for mail protocols (SMTP, POP3, IMAP, and HTTP POST).

18. Next to **Content Size Limit**, enter content size parameters. The content size check occurs before the scan request is sent. The content size refers to accumulated TCP payload size.

19. Next to **Scan engine timeout**, enter scanning timeout parameters.

20. Next to **Decompress Layer Limit**, enter decompression layer limit parameters.

21. In the Scan mode section, select either **Scan all files**, if you are scanning all content, or **Scan files with specified extension**, if you are scanning by file extensions.

**NOTE:** If you select Scan files with specified extension, you must select a filename extension list custom object from the Scan engine filename extension list that appears.

22. Select the **Fallback settings** tab.

23. Next to Default (fallback option), select **Log and permit** or **Block** from the list. In most cases, Block is the default fallback option.

24. Next to Corrupt File (fallback option), select **Log and permit** or **Block** from the list.

25. Next to Password File (fallback option), select **Log and permit** or **Block** from the list.

26. Next to Decompress Layer (fallback option), select **Log and permit** or **Block** from the list.

27. Next to Content Size (fallback option), select **Log and permit** or **Block** from the list.

28. Next to Engine Not Ready (fallback option), select **Log and permit** or **Block** from the list.
29. Next to Timeout (fallback option), select **Log and permit** or **Block** from the list.
30. Next to Out Of Resources (fallback option), select **Log and permit** or **Block** from the list.
31. Next to Too Many Request (fallback option), select **Log and permit** or **Block** from the list.
32. Select the **Notification options** tab.
33. In the Fallback block section, next to Notification type, select **Protocol Only** or **Message** to select the type of notification that is sent when a fallback option of block is triggered.
34. Next to Notify mail sender, select **Yes** or **No**.
35. If you selected Yes, next to **Custom Message**, enter text for the message body of your custom message for this notification (if you are using a custom message).
36. Next to **Custom message subject**, enter text to appear in the subject line of your custom message for this notification (if you are using a custom message).
37. In the Fallback non block section, next to Notify mail recipient, select **Yes** or **No**.
38. If you selected Yes, next to **Custom Message**, enter text for the message body of your custom message for this notification (if you are using a custom message).
39. Next to **Custom message subject**, enter text to appear in the subject line of your custom message for this notification (if you are using a custom message).
40. Select the **Notification options cont** tab.
41. In the Virus detection section, next to Notification type, select **Protocol Only** or **Message** to select the type of notification that is sent when a fallback option of block is triggered.
42. Next to Notify mail sender, select **Yes** or **No**.
43. If you selected Yes, next to **Custom Message**, enter text for the message body of your custom message for this notification (if you are using a custom message).
44. Next to **Custom message subject**, enter text to appear in the subject line of your custom message for this notification (if you are using a custom message). The limit is 255 characters.
45. Click **OK** to check your configuration and save it as a candidate configuration, then click **Commit Options>Commit**.
46. If the configuration item is saved successfully, you receive a confirmation and you must click **OK** again. If it is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

**NOTE:** You create a separate antivirus profile for each antivirus protocol. These profiles may basically contain the same configuration information, but when you are creating your UTM policy for an antivirus profile, the UTM policy configuration page provides separate antivirus profile selection fields for each supported protocol.

## Configuring Full Antivirus UTM Policies (J-Web Procedure)

**Supported Platforms**    **SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650**

After you have created an antivirus feature profile, configure a UTM policy to which you can attach the feature profile:

1. Select **Configure>Security>Policy>UTM Policies**.
2. From the UTM policy configuration window, click **Add** to configure a UTM policy. This action takes you to the policy configuration pop-up window.
3. Select the **Main** tab in pop-up window.
4. In the **Policy name** box, enter a unique name for the UTM policy.
5. In the **Session per client limit** box, enter a session per client limit from 0 to 20000 for this UTM policy.
6. In the **Session per client over limit** list, select the action that the device should take when the session per client limit for this UTM policy is exceeded. Options include **Log and permit** and **Block**.
7. Select the **Anti-Virus profiles** tab in the pop-up window.
8. Select the appropriate profile you have configured from the list for the corresponding protocol listed.
9. Click **OK** to check your configuration and save it as a candidate configuration, then click **Commit Options>Commit**.
10. If the policy is saved successfully, you receive a confirmation and you must click **OK** again. If the profile is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

## Attaching Full Antivirus UTM Policies to Security Policies (J-Web Procedure)

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

After you create a UTM policy, create a security policy and attach the UTM policy to the security policy:

1. Select **Configure>Security>Policy>FW Policies**.
2. From the Security Policy window, click **Add** to configure a security policy with UTM. This action takes you to the policy configuration pop-up window.
3. In the Policy tab, enter a name in the **Policy Name** box.
4. Next to **From Zone**, select a zone from the list.
5. Next to **To Zone**, select a zone from the list.
6. Choose a **Source Address**.
7. Choose a **Destination Address**.
8. Choose an application by selecting **junos-protocol** (for all protocols that support antivirus scanning) in the Application Sets box and clicking the —> button to move it to the Matched box.
9. Next to Policy Action, select **Permit**.

**NOTE:** When you select Permit for Policy Action, several additional fields become available in the Applications Services tab, including UTM Policy.

10. Select the **Application Services** tab in the pop-up window.
11. Next to **UTM Policy**, select the appropriate policy from the list. This action attaches your UTM policy to the security policy.
12. Click **OK** to check your configuration and save it as a candidate configuration, then click **Commit Options>Commit**.
13. If the policy is saved successfully, you receive a confirmation and you must click **OK** again. If the profile is not saved successfully, you can click **Details** in the pop-up window that appears to discover why.

You must activate your new policy to apply it.

## Scanner Pattern Database

- [Example: Configuring the Full Antivirus Pattern Update Server on page 366](#)
- [Example: Automatically Updating Full Antivirus Patterns \(J-Web\) on page 367](#)
- [Example: Automatically Updating Full Antivirus Patterns on page 368](#)
- [Manually Updating, Reloading, and Deleting Full Antivirus Patterns \(CLI Procedure\) on page 369](#)

### Example: Configuring the Full Antivirus Pattern Update Server

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

This example shows how to configure the pattern-update server on the security device.

- [Requirements on page 366](#)
- [Overview on page 366](#)
- [Configuration on page 366](#)
- [Verification on page 367](#)

---

#### Requirements

Before you begin:

- Obtain a valid antivirus scanner license. See [“Full Antivirus Protection Overview” on page 323](#).
- Get network connectivity and access to the pattern database server. See [“Understanding Full Antivirus Pattern Updates” on page 324](#).
- Configure your DNS settings and port settings (port 80) correctly. See *DNS Overview*.

---

#### Overview

To configure the pattern-update server on the security device, enter the URL address of the pattern-update server. In this example, you update the URL for an SRX210 Services Gateway.

By default, the Juniper-Kaspersky URL for full antivirus protection is `http://update.juniper-updates.net/AV/device-name`, where *device-name* is the name of your device, such as, SRX210.

---

#### Configuration

##### Step-by-Step Procedure

To configure the pattern-update server on a security device:

1. Specify the URL of the pattern-update server.  
[edit]

```
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine
pattern-update url http://update.juniper-updates.net/AV/SRX210
```

**NOTE:** Other than the platform name, you should not change this URL unless you are experiencing problems with it and have called for support.

2. If you are done configuring the device, commit the configuration.

```
[edit]
user@host# commit
```

### Verification

To verify the configuration is working properly, enter the **show security utm** command.

#### Related Documentation

- *UTM Full Antivirus Protection Feature Guide for Security Devices*

- [Example: Automatically Updating Full Antivirus Patterns on page 368](#)
- [Manually Updating, Reloading, and Deleting Full Antivirus Patterns \(CLI Procedure\) on page 369](#)

### Example: Automatically Updating Full Antivirus Patterns (J-Web)

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

In this example, you configure the security device to update the pattern file automatically every 120 minutes. (The default antivirus pattern-update interval is 60 minutes.)

To automatically update antivirus patterns:

1. Select **Configure>UTM>Anti-Virus**.
2. Next to Interval, in the Kaspersky Lab Engine section, enter **120** in the box.
3. Click **OK** to check your configuration and save it as a candidate configuration, then click **Commit Options>Commit**.

## Example: Automatically Updating Full Antivirus Patterns

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

This example shows how to update the pattern file automatically on a security device.

- [Requirements on page 368](#)
- [Overview on page 368](#)
- [Configuration on page 368](#)
- [Verification on page 368](#)

### Requirements

---

Before you begin:

- Obtain a valid antivirus scanner license. See [“Full Antivirus Protection Overview” on page 323](#).
- Get network connectivity and access to the pattern database server. See [“Understanding Full Antivirus Pattern Updates” on page 324](#).
- Configure your DNS settings and port settings (port 80) correctly. See [DNS Overview](#).

### Overview

---

In this example, you configure the security device to update the pattern file automatically every 120 minutes. (The default antivirus pattern-update interval is 60 minutes.)

### Configuration

---

#### Step-by-Step Procedure

To configure the security device to update the pattern file automatically:

1. Set the interval.  
  
[edit]  
user@host# **set security utm feature-profile anti-virus kaspersky-lab-engine pattern-update interval 120**
2. If you are done configuring the device, commit the configuration.  
  
[edit]  
user@host# **commit**

### Verification

---

To verify the configuration is working properly, enter the **show security utm** command.

#### Related Documentation

## Manually Updating, Reloading, and Deleting Full Antivirus Patterns (CLI Procedure)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To manually update antivirus patterns, enter the following CLI statement:

```
user@host> request security utm anti-virus kaspersky-lab-engine pattern-update
```

To manually reload antivirus patterns, enter the following CLI statement:

```
user@host> request security utm anti-virus kaspersky-lab-engine pattern-reload
```

To manually delete antivirus patterns, enter the following CLI statement:

```
user@host> request security utm anti-virus kaspersky-lab-engine pattern-delete
```

- [Configuring Full Antivirus Scan Session Throttling \(CLI Procedure\) on page 375](#)
- [Example: Configuring Antivirus Scanning Fallback Options on page 376](#)

## Example: Configuring Full Antivirus Scan Settings at Different Levels

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

This example shows how to configure full antivirus scan settings at different levels.

- [Requirements on page 370](#)
- [Overview on page 370](#)
- [Configuration on page 370](#)
- [Verification on page 371](#)

---

### Requirements

Before you begin, decide the type of scanning option you require. See [“Understanding Full Antivirus Scan Level Settings” on page 326](#).

---

### Overview

In this example, you define antivirus scanning options on any of the following levels:

- Global level
- UTM profile level using the kasprof1 UTM profile
- Firewall policy level using the p1 UTM policy

---

### Configuration

#### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile anti-virus kaspersky-lab-engine pattern-update interval
  20
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options default block
set utm-policy p1 anti-virus http-profile av-profile
```

#### Step-by-Step Procedure

The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure antivirus scanning options at different levels:

1. Configure scanning options at the global level.  

```
[edit security utm]
user@host# set feature-profile anti-virus kaspersky-lab-engine pattern-update
  interval 20
```
2. Configure scanning options at the UTM profile level.  

```
[edit security utm]
user@host# set feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options default block
```
3. Configure scanning options at the UTM policy level.  

```
[edit security utm]
```

```
user@host# set utm-policy p1 anti-virus http-profile av-profile
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

For brevity, this **show** command output includes only the configuration that is relevant to this example. Any other configuration on the system has been replaced with ellipses (...).

```
[edit]
user@host# show security utm
...
  utm-policy p1 {
    anti-virus {
      http-profile av-profile
      ftp {
        upload-profile av-profile
        download-profile av-profile
      }
    }
  }
...
```

If you are done configuring the device, enter **commit** from configuration mode.

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying Scan Settings at Different Levels on page 371](#)

#### *Verifying Scan Settings at Different Levels*

**Purpose** Verify the scan settings at different levels.

**Action** From operational mode, enter the **show configuration security utm** command.

- Related Documentation**
- *UTM Full Antivirus Protection Feature Guide for Security Devices*
  - [Full Antivirus Protection Overview on page 323](#)
  - [Understanding the Full Antivirus Internal Scan Engine on page 326](#)
  - [Understanding Full Antivirus Scan Mode Support on page 327](#)

### Example: Configuring Full Antivirus File Extension Scanning

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

This example shows how to configure full antivirus file extension scanning.

- [Requirements on page 372](#)
- [Overview on page 372](#)
- [Configuration on page 372](#)
- [Verification on page 372](#)

---

## Requirements

Before you begin, decide the mode of scanning you require. See “[Understanding Full Antivirus Scan Mode Support](#)” on page 327.

---

## Overview

In this example, you perform the following tasks:

1. Create a file called `extlist1` for the `kasprof1` profile, and add extensions such as `.zip`, `.js`, and `.vbs` to the `extlist1`.
2. Configure the scan mode setting. You can choose to scan all files or to scan only the files that have the extensions that you specify. This example uses the scan by-extension option to configure the device to use the `extlist1` file.

---

## Configuration

### Step-by-Step Procedure

To configure full antivirus file extension scanning:

1. Create an extension for the list and add extensions to the filename extension list.  

```
[edit]
user@host# set security utm custom-objects filename-extension extlist1 value [zip
js vbs]
```
2. Configure scan extension settings.  

```
[edit]
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
kasprof1 scan-options scan-extension extlist1
```
3. Configure the scan mode setting.  

```
[edit]
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
kasprof1 scan-options scan-mode by-extension
```
4. If you are done configuring the device, commit the configuration.  

```
[edit]
user@host# commit
```

---

## Verification

To verify the configuration is working properly, enter the **show security utm** command.

### Related Documentation

## Configuring Full Antivirus File Extension Scanning (CLI Procedure)

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

To configure file-extension scanning, use the following CLI configuration statements:

```
security utm {
  custom-objects {
    filename-extension { ; set of list
      name extension-list-name; #mandatory
      value windows-extension-string;
    }
  }
}

security utm feature-profile anti-virus kaspersky-lab-engine profile name {
  scan-options {
    scan-extension ext-list
  }
}
```

## Example: Configuring Full Antivirus Intelligent Prescreening

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

This example shows how to configure full antivirus intelligent prescreening. By default, intelligent prescreening is enabled to improve antivirus scanning performance.

- [Requirements on page 373](#)
- [Overview on page 373](#)
- [Configuration on page 374](#)
- [Verification on page 374](#)

### Requirements

Before you begin, understand how intelligent prescreening enables the improvement of antivirus scanning performance. See “[Understanding Full Antivirus Intelligent Prescreening on page 328](#)”.

### Overview

In this example, you perform the following tasks:

- Enable intelligent prescreening for the kasprof1 profile.
- Disable intelligent prescreening for the kasprof1 profile.

### Configuration

#### Step-by-Step Procedure

To enable or disable full antivirus intelligent prescreening:

1. Enable intelligent prescreening for the kasprof1 profile.

[edit]

```
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
kasprof1 scan-options intelligent-prescreening
```

2. Disable intelligent prescreening for the kasprof1 profile.

[edit]

```
user@host# set security utm feature-profile anti-virus kaspersky-lab-engine profile
kasprof1 scan-options no-intelligent-prescreening
```

**NOTE:** Intelligent prescreening is intended only for use with non-encoded traffic. It is not applicable to mail protocols (SMTP, POP3, IMAP) or HTTP POST.

3. If you are done configuring the device, commit the configuration.

[edit]

```
user@host# commit
```

### Verification

To verify the configuration is working properly, enter the **show security utm** command.

## Configuring Full Antivirus Content Size Limits (CLI Procedure)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To configure content size limits, use the following CLI configuration statements:

```
security utm feature-profile anti-virus kaspersky-lab-engine profile name {
  scan-options {
    content-size-limit KB;
  }
}
```

## Configuring Full Antivirus Decompression Layer Limits (CLI Procedure)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To configure decompression layer limits, use the following CLI configuration statements:

```
security utm feature-profile anti-virus kaspersky-lab-engine profile name {
  scan-options {
    decompress-layer-limit number
  }
}
```

## Configuring Full Antivirus Scanning Timeouts (CLI Procedure)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To configure scanning timeouts, use the following CLI configuration statements:

```
security utm feature-profile anti-virus kaspersky-lab-engine profile name {
  scan-options {
    timeout-value seconds {
    }
  }
}
```

- Related Documentation**
- [UTM Full Antivirus Protection Feature Guide for Security Devices](#)

## Configuring Full Antivirus Scan Session Throttling (CLI Procedure)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To configure scan session throttling, use the following CLI configuration statements:

```
security utm utm-policy name
  traffic-options {
    sessions-per-client {
      limit number;
      over-limit { log-and-permit | block }
    }
  }
```

## Example: Configuring Antivirus Scanning Fallback Options

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

This example shows how to configure antivirus scanning fallback options.

- [Requirements on page 376](#)
- [Overview on page 376](#)
- [Configuration on page 376](#)
- [Verification on page 378](#)

### Requirements

---

Before you begin, understand the possible error types and the default fallback actions for those error types. See [“Understanding Antivirus Scanning Fallback Options” on page 341](#).

### Overview

---

In this example, you configure a feature profile called kasprof, and set the fallback scanning options for default, content-size, corrupt-file, decompress-layer, engine-not-ready, out-of-resources, password-file, timeout, too-many-requests, as block.

**NOTE:** The command for changing the URL for the pattern database is:

```
[edit]
user@host# edit security utm feature-profile anti-virus kaspersky-lab-engine
[edit security utm feature-profile anti-virus kaspersky-lab-engine]
user@host# set pattern-update url http://..
```

The default URL is `http://update.juniper-updates.net/AV/<device-version>`. You should not change this URL unless you are experiencing problems with it and have called for support.

### Configuration

---

**CLI Quick Configuration**

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile anti-virus type kaspersky-lab-engine
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options content-size block
```

```

set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options corrupt-file block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options decompress-layer block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options default block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options engine-not-ready block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options out-of-resources block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options password-file block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options timeout block
set security utm feature-profile anti-virus kaspersky-lab-engine profile kasprof1
  fallback-options too-many-requests block

```

### Step-by-Step Procedure

The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure scanning fallback options:

1. Select and configure the engine type.

```
[edit]
```

```
user@host# set security utm feature-profile anti-virus type kaspersky-lab-engine
```

2. Create a profile for the Kaspersky Lab engine and configure a list of fallback options as block or log-and-permit.

```
[edit security utm feature-profile anti-virus kaspersky-lab-engine]
```

```
user@host# set profile kasprof1 fallback-options content-size block
```

```
user@host# set profile kasprof1 fallback-options corrupt-file block
```

```
user@host# set profile kasprof1 fallback-options decompress-layer block
```

```
user@host# set profile kasprof1 fallback-options default block
```

```
user@host# set profile kasprof1 fallback-options engine-not-ready block
```

```
user@host# set profile kasprof1 fallback-options out-of-resources block
```

```
user@host# set profile kasprof1 fallback-options password-file block
```

```
user@host# set profile kasprof1 fallback-options timeout block
```

```
user@host# set profile kasprof1 fallback-options too-many-requests block
```

### Results

From configuration mode, confirm your configuration by entering the **show security utm feature-profile anti-virus** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

For brevity, this **show** command output includes only the configuration that is relevant to this example. Any other configuration on the system has been replaced with ellipses (...).

```
[edit]
```

```
user@host# show security utm feature-profile anti-virus
```

```
kaspersky-lab-engine {
```

```
  profile kasprof1 {
```

```
    fallback-options {
```

```
        default block;  
        corrupt-file block;  
        password-file block;  
        decompress-layer block;  
        content-size block;  
        engine-not-ready block;  
        timeout block;  
        out-of-resources block;  
        too-many-requests block;  
    }  
}  
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

To confirm that the configuration is working properly, perform this task:

- [Verifying the Antivirus Scanning Fallback Options on page 378](#)

#### *Verifying the Antivirus Scanning Fallback Options*

**Purpose** Verify the antivirus scanning fallback options.

**Action** From operational mode, enter the **show configuration security utm** command.

## Whitelists

- [Example: Configuring MIME Whitelists to Bypass Antivirus Scanning on page 380](#)
- [Configuring URL Whitelists to Bypass Antivirus Scanning \(CLI Procedure\) on page 381](#)

## Example: Configuring MIME Whitelists to Bypass Antivirus Scanning

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

This example shows how to configure MIME whitelists to bypass antivirus scanning.

- [Requirements on page 380](#)
- [Overview on page 380](#)
- [Configuration on page 380](#)
- [Verification on page 381](#)

---

### Requirements

Before you begin, decide the type of MIME lists used to configure MIME type antivirus scan bypassing. See “[Understanding MIME Whitelists](#)” on page 338.

---

### Overview

In this example, you create MIME lists called avmime2 and ex-avmime2 and add patterns to them.

---

### Configuration

**Step-by-Step Procedure**

To configure MIME whitelists to bypass antivirus scanning:

1. Create MIME lists and add patterns to the lists.

```
[edit]
user@host# set security utm custom-objects mime-pattern avmime2 value
[video/quicktime image/x-portable-anymap x-world/x-vrml]
user@host# set security utm custom-objects mime-pattern ex-avmime2 value
[video/quicktime-inappropriate]
```

- If you are done configuring the device, commit the configuration.

```
[edit]
user@host# commit
```

### Verification

To verify the configuration is working properly, enter the **show security utm** command.

#### Related Documentation

## Configuring URL Whitelists to Bypass Antivirus Scanning (CLI Procedure)

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

To configure URL whitelists, use the following CLI configuration statements:

```
security utm custom-objects {
  custom-url-category { ; set of list
    name url-category-name; #mandatory
    value url-pattern-name;
  }
}
```

## HTTP Trickling

- [Configuring HTTP Trickling to Prevent Timeouts During Antivirus Scanning \(CLI Procedure\) on page 381](#)

## Configuring HTTP Trickling to Prevent Timeouts During Antivirus Scanning (CLI Procedure)

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

To configure HTTP trickling, use the following CLI configuration statements:

```
security utm feature-profile anti-virus kaspersky-lab-engine {
  profile name {
    trickling timeout seconds;
  }
}

## Notifications

---

- [Configuring Protocol-Only Virus-Detected Notifications \(CLI Procedure\) on page 382](#)
- [Configuring E-Mail Virus-Detected Notifications \(CLI Procedure\) on page 382](#)
- [Configuring Custom Message Virus-Detected Notifications \(CLI Procedure\) on page 383](#)

### Configuring Protocol-Only Virus-Detected Notifications (CLI Procedure)

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To configure protocol-only virus-detected notifications, use the following CLI configuration statements:

```
security utm feature-profile anti-virus kaspersky-lab-engine profile name {  
  notification-options {  
    virus-detection {  
      type { protocol-only | message }  
    }  
    fallback-block {  
      type { protocol-only | message }  
    }  
  }  
}
```

### Configuring E-Mail Virus-Detected Notifications (CLI Procedure)

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To configure the system to send e-mail notifications when viruses are detected, use the following CLI configuration statements:

```
security utm feature-profile anti-virus kaspersky-lab-engine profile name {  
  notification-options {  
    virus-detection {  
      notify-mail-sender  
    }  
    fallback-block {  
      notify-mail-sender  
    }  
  }  
}
```

```

        fallback-non-block {
        notify-mail-recipient
        }
    }
}

```

## Configuring Custom Message Virus-Detected Notifications (CLI Procedure)

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

To configure the system to send custom messages when viruses are detected, use the following CLI configuration statements:

```

security utm feature-profile anti-virus kaspersky-lab-engine profile name {
    notification-options {
        virus-detection {
            custom-message msg
            custom-message-subject subject-msg
        }
        fallback-block {
            custom-message msg
            custom-message-subject subject-msg
        }
        fallback-non-block {
            custom-message msg
            custom-message-subject subject-msg
        }
    }
}

```

## Security Configuration Statement Hierarchy

### Supported Platforms [LN Series, SRX Series](#)

Use the statements in the **security** configuration hierarchy to configure actions, certificates, dynamic virtual private networks (VPNs), firewall authentication, flow, forwarding options, group VPNs, Intrusion Detection Prevention (IDP), Internet Key Exchange (IKE), Internet Protocol Security (IPsec), logging, Network Address Translation (NAT), public key infrastructure (PKI), policies, resource manager, rules, screens, secure shell known hosts, trace options, user identification, Unified Threat Management (UTM), and zones. Statements that are exclusive to the SRX Series devices running Junos OS are described in this section.

Each of the following topics lists the statements at a sub-hierarchy of the **[edit security]** hierarchy.

- *[edit security address-book] Hierarchy Level*
- *[edit security alarms] Hierarchy Level*
- *[edit security alg] Hierarchy Level*
- *[edit security analysis] Hierarchy Level*
- *[edit security application-firewall] Hierarchy Level*
- *[edit security application-tracking] Hierarchy Level*
- *[edit security certificates] Hierarchy Level*
- *[edit security datapath-debug] Hierarchy Level*
- *[edit security dynamic-vpn] Hierarchy Level*
- *[edit security firewall-authentication] Hierarchy Level*
- *[edit security flow] Hierarchy Level*
- *[edit security forwarding-options] Hierarchy Level*
- *[edit security forwarding-process] Hierarchy Level*
- *[edit security gprs] Hierarchy Level*
- *[edit security group-vpn] Hierarchy Level*

## address-blacklist

### Supported Platforms

<b>Syntax</b>	address-blacklist <i>list-name</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-spam]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	Enter an address blacklist (or whitelist) custom object for local list spam filtering.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## allow-email (Security Fallback Block)

---

### Supported Platforms

**Syntax** allow-email;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options fallback-block]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options fallback-block]  
[edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options fallback-block]

**Release Information** Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** Enable e-mail notification to notify a specified administrator when a fallback-block occurs.

**Required Privilege** security—To view this statement in the configuration.  
**Level** security-control—To add this statement to the configuration.

## anti-virus (Security UTM Policy)

### Supported Platforms

**Syntax**

```
anti-virus {
  ftp {
    download-profile profile-name;
    upload-profile profile-name;
  }
  http-profile profile-name;
  imap-profile profile-name;
  pop3-profile profile-name;
  smtp-profile profile-name;
}
```

**Hierarchy Level** [edit security utm utm-policy *policy-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure a UTM policy for the antivirus protocols and attach this policy to a security profile to implement it.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## block-content-type

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	block-content-type (activex   exe   http-cookie   java-applet   zip);
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Apply blocks to other available content such as exe, http-cookie, java-applet. This is for HTTP only.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>activex</b>—Block ActiveX.</li><li>• <b>exe</b>—Block EXE files.</li><li>• <b>http-cookie</b>—Block cookies.</li><li>• <b>java-applet</b>—Block Java applets.</li><li>• <b>zip</b>—Block ZIP files.</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## block-extension

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	block-extension <i>extension-list</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Apply block extensions to the content-filtering profile.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## block-mime

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>block-mime {   exception <i>list-name</i>;   list <i>list-name</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile content-filtering profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Apply MIME pattern list custom-objects to the content-filtering profile for blocking MIME types.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## content-filtering (Security Feature Profile)

---

### Supported Platforms

**Syntax**

```
content-filtering {
  profile profile-name {
    block-command protocol-command-list;
    block-content-type (activex | exe | http-cookie | java-applet | zip);
    block-extension extension-list;
    block-mime {
      exception list-name;
      list list-name;
    }
    notification-options {
      custom-message message;
      (notify-mail-sender | no-notify-mail-sender);
      type (message | protocol-only);
    }
    permit-command protocol-command-list;
  }
  traceoptions flag flag;
}
```

**Hierarchy Level** [edit security utm feature-profile]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure UTM content-filtering features.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- *UTM Content Filtering Feature Guide for Security Devices*

## content-size

### Supported Platforms

**Syntax** content-size (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* fallback-options]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* fallback-options]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** If the content size exceeds a set limit, the content is either passed or blocked. The default action is log-and-permit.

**NOTE:** When you configure the content-size value, keep in mind that in certain cases, content size is available in the protocol headers, so the max-content-size fallback is applied before a scan request is sent. However, in many cases, content size is not provided in the protocol headers. In these cases, the TCP payload is sent to the antivirus scanner and accumulates until the end of the payload. If the accumulated payload exceeds the maximum content size value, then max-content-size fallback is applied. The default fallback action is log and permit, so you may want to change this option to block, in which case such a packet is dropped and a block message is sent to the client.

- Options**
- **block**—Log the error and deny the traffic
  - **log-and-permit**—Log the error and permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

- Related Documentation**
- *Junos OS UTM Library for Security Devices*
  - *UTM Full Antivirus Protection Feature Guide for Security Devices*
  - *UTM Express Antivirus Protection Feature Guide for Security Devices*

## content-size-limit

---

### Supported Platforms

<b>Syntax</b>	content-size-limit <i>value</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> scan-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> scan-options] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	The content size check occurs before the scan request is sent. The content size refers to accumulated TCP payload size.  Range: 20 through 20,000
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## corrupt-file

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	corrupt-file (block   log-and-permit);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> fallback-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Corrupt file is the error returned by the scan engine when engine detects a corrupted file. The default action is log-and-permit.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>block</b>—Log the error and deny the traffic</li> <li>• <b>log-and-permit</b>—Log the error and permit the traffic</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## custom-message (Security Email Notify)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	custom-message <i>message</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update email-notify] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update email-notify] [edit security utm feature-profile anti-virus sophos-engine pattern-update email-notify]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.
<b>Description</b>	You can configure the device to notify a specified administrator when patterns are updated. This is an e-mail notification with a custom message.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## custom-message (Security Fallback Block)

---

### Supported Platforms

**Syntax**    custom-message *message*;

**Hierarchy Level**    [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options fallback-block]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options fallback-block]  
[edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options fallback-block]

**Release Information**    Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description**    Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file.

**Required Privilege**    security—To view this statement in the configuration.  
**Level**    security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- *UTM Express Antivirus Protection Feature Guide for Security Devices*

## custom-message (Security Fallback Non-Block)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	custom-message <i>message</i> ;
<b>Hierarchy Level</b>	<p>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-non-block]</p> <p>[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-non-block]</p> <p>[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-non-block]</p>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file.
<b>Required Privilege Level</b>	<p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## custom-message (Security Virus Detection)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	custom-message <i>message</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options virus-detection] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options virus-detection] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options virus-detection]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## custom-message-subject (Security Email Notify)

---

<b>Supported Platforms</b>	
<b>Syntax</b>	custom-message-subject <i>message-subject</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update email-notify] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update email-notify] [edit security utm feature-profile anti-virus sophos-engine pattern-update email-notify]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.
<b>Description</b>	You can configure the device to notify a specified administrator when patterns are updated. This is an e-mail notification with a custom message and a custom subject line.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## custom-message-subject (Security Fallback Block)

### Supported Platforms

<b>Syntax</b>	custom-message-subject <i>message-subject</i> ;
<b>Hierarchy Level</b>	<p>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-block]</p> <p>[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-block]</p> <p>[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-block]</p>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file. As part of a custom message, you can customize the message subject line.
<b>Required Privilege Level</b>	<p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## custom-message-subject (Security Fallback Non-Block)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	custom-message-subject <i>message-subject</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-non-block] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-non-block] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-non-block]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file. As part of a custom message, you can customize the message subject line.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## custom-message-subject (Security Virus Detection)

### Supported Platforms

<b>Syntax</b>	custom-message-subject <i>message-subject</i> ;
<b>Hierarchy Level</b>	<p>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options virus-detection]</p> <p>[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options virus-detection]</p> <p>[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options virus-detection]</p>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file. As part of a custom message, you can customize the message subject line.
<b>Required Privilege Level</b>	<p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## custom-objects

---

### Supported Platforms

**Syntax**

```
custom-objects {  
  custom-url-category object-name {  
    value [value];  
  }  
  filename-extension object-name {  
    value [value];  
  }  
  mime-pattern object-name {  
    value [value];  
  }  
  protocol-command object-name {  
    value [value];  
  }  
  url-pattern object-name {  
    value [value];  
  }  
}
```

**Hierarchy Level** [edit security utm]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Configure custom objects before configuring UTM feature-profile features.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommended having a custom category name be the same as the predefined category name.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level**

security—To view this statement in the configuration.
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- *UTM Content Filtering Feature Guide for Security Devices*

## custom-url-category

---

### Supported Platforms

**Syntax** `custom-url-category object-name {  
value [value];  
}`

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Use URL pattern lists to create Custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

**Options**

- ***object-name***—Name of the URL category-list object.
- ***value value***—Value of the URL category-list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**

security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- [Understanding UTM Custom Objects on page 5](#)
- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*

## decompress-layer

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	decompress-layer (block   log-and-permit);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> fallback-options]
<b>Description</b>	Decompress layer error is the error returned by the scan engine when the scanned file has too many compression layers. The default action is block.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>block</b>—Log the error and deny the traffic</li><li>• <b>log-and-permit</b>—Log the error and permit the traffic</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## decompress-layer-limit

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	decompress-layer-limit <i>value</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	The decompression layer limit specifies how many layers of nested compressed files and files with internal extractable objects, such as archive files (tar), the internal antivirus scanner can decompress before it executes the virus scan.  Range: 1 through 4
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## default (Security Antivirus)

---

### Supported Platforms

**Syntax** default (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* fallback-options]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* fallback-options]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** All errors other than those specifically listed fall into this category. This could include either unhandled system exceptions (internal errors) or other unknown errors.

**Options**

- **block**—Log the error and deny the traffic
- **log-and-permit**—Log the error and permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- *UTM Express Antivirus Protection Feature Guide for Security Devices*

## display-host (Security Fallback Block)

---

### Supported Platforms

<b>Syntax</b>	display-host;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-block]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Display the computer host name in the notification e-mail sent to the administrator when a fallback-block notification occurs.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## download-profile (Security Antivirus FTP)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	download-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> anti-virus ftp]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the antivirus FTP (download) protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## email-notify

---

### Supported Platforms

**Syntax**    email-notify {  
                   admin-email *email-address*;  
                   custom-message *message*;  
                   custom-message-subject *message-subject*;  
                   }

**Hierarchy Level**    [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update]  
                           [edit security utm feature-profile anti-virus juniper-express-engine pattern-update]  
                           [edit security utm feature-profile anti-virus sophos-engine pattern-update]

**Release Information**    Statement introduced in Release 9.5 of Junos OS.

**Description**    You can configure the device to notify a specified administrator when patterns are updated. This is an e-mail notification with a custom message and a custom subject line.

**Options**    The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level**    security—To view this statement in the configuration.  
                                       security-control—To add this statement to the configuration.

**Related Documentation**    • *Junos OS UTM Library for Security Devices*  
                                       • *UTM Full Antivirus Protection Feature Guide for Security Devices*  
                                       • *UTM Express Antivirus Protection Feature Guide for Security Devices*

## exception (Security Antivirus Mime Whitelist)

---

**Supported Platforms**    [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Syntax**    `exception listname;`

**Hierarchy Level**    `[edit security utm feature-profile anti-virus mime-whitelist]`  
`[edit security utm feature-profile anti-virus mime-whitelist list listname]`

**Release Information**    Statement introduced in Release 9.5 of Junos OS.

**Description**    Configure the antivirus scanner to use an exception list to the MIME bypass list (custom objects). To use the exception list, you first create a whitelist custom-object list with the **list** statement. The system will first look at any existing whitelist mime pattern. If it matches an item, it will then continue to look for any exceptions to the whitelist and will then scan any item in the exception list.

**Required Privilege**    security—To view this statement in the configuration.  
**Level**    security-control—To add this statement to the configuration.

**Related**    • *Junos OS UTM Library for Security Devices*  
**Documentation**    • *UTM Full Antivirus Protection Feature Guide for Security Devices*

## engine-not-ready

---

### Supported Platforms

**Syntax** engine-not-ready (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* fallback-options]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* fallback-options]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** The scan engine is initializing itself, for example, loading the signature database. During this phase, it is not ready to scan a file. A file could either pass or be blocked according to this setting. The default action is block.

**Options**

- **block**—Log the error and deny the traffic
- **log-and-permit**—Log the error and permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- *UTM Express Antivirus Protection Feature Guide for Security Devices*

## fallback-block (Security Antivirus)

---

### Supported Platforms

<b>Syntax</b>	<pre>fallback-block {   administrator-email <i>email-address</i>;   allow-email;   custom-message <i>message</i>;   custom-message-subject <i>message-subject</i>;   display-host;   (notify-mail-sender   no-notify-mail-sender);   type (message   protocol-only); }</pre>
<b>Hierarchy Level</b>	<p>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options]</p> <p>[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options]</p> <p>[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options]</p>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Configure notifications for fallback blocking actions. Fallback options tell the system how to handle the errors returned by either the scan engine or the scan manager.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## fallback-non-block (Security Antivirus)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>fallback-non-block {   custom-message <i>message</i>;   custom-message-subject <i>message-subject</i>;   (notify-mail-recipient   no-notify-mail-recipient); }</pre>
<b>Hierarchy Level</b>	<pre>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options]</pre>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Configure notifications for fallback nonblocking actions.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	<p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## fallback-options (Security Antivirus Kaspersky Lab Engine)

---

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

**Syntax** fallback-options {  
    content-size (block | log-and-permit);  
    corrupt-file (block | log-and-permit);  
    decompress-layer (block | log-and-permit);  
    default (block | log-and-permit);  
    engine-not-ready (block | log-and-permit);  
    out-of-resources (block | (log-and-permit);  
    password-file (block | (log-and-permit);  
    timeout (block | log-and-permit);  
    too-many-requests (block | log-and-permit);  
}

**Hierarchy Level** [edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Fallback options tell the system how to handle the errors returned by either the scan engine or the scan manager.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## http-profile (Security Antivirus)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	http-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> anti-virus]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the antivirus HTTP protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## intelligent-prescreening

<b>Supported Platforms</b>	
<b>Syntax</b>	intelligent-prescreening;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> scan-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	<p>Enable intelligent prescreening.</p> <p>Intelligent prescreening tells the antivirus module to begin scanning a file much earlier. In this case, the scan engine uses the first packet or the first several packets to determine if a file could possibly contain malicious code. The scan engine does a quick check on these first packets and if the scan engine finds that it is unlikely that the file is infected, it then determines that it is safe to bypass the normal scanning procedure.</p> <p>You can disable intelligent prescreening with the <b>no-intelligent-prescreening</b> statement.</p>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## interval (Security Antivirus)

---

### Supported Platforms

**Syntax**    interval *value*;

**Hierarchy Level**    [edit security utm feature-profile anti-virus juniper-express-engine pattern-update]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update]  
[edit security utm feature-profile anti-virus sophos-engine pattern-update]

**Release Information**    Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description**    Set the pattern data files auto-update interval. You can choose to leave the default interval value or you can change it by using this command. You can also force a manual update, if necessary.

**NOTE:** The data files used with Sophos are not typical virus pattern files; they are small files that help guide virus scanning logic. The full virus pattern database is stored on an external Sophos server called the Sophos Extensible List (SXL) server.

---

**Options**    *value*—Pattern data files auto-update interval in minutes.

**Range:** 10 through 10,080 minutes (10 minutes through 7 days)

**Default:** For Juniper Express engine and Kaspersky Lab engine, 60 minutes; for Sophos engine, 1440 minutes (every 24 hours)

**Required Privilege Level**    security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## imap-profile (Security UTM Policy Antivirus)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	imap-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> anti-virus]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the antivirus IMAP protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## kaspersky-lab-engine

---

**Supported Platforms**    [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Syntax**    kaspersky-lab-engine {  
    pattern-update {  
        email-notify {  
            admin-email *email-address*;  
            custom-message *message*;  
            custom-message-subject *message-subject*;  
        }  
        interval *value*;  
        no-autoupdate;  
        proxy {

## list (Security Antivirus Mime Whitelist)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>list <i>listname</i> {     exception <i>listname</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus mime-whitelist]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure the antivirus scanner to use MIME bypass lists (custom objects). If you want to have exceptions to the whitelist, create a mime-pattern list with the <b>exception</b> statement in addition to the <b>list</b> statement.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

---

## mime-pattern

---

### Supported Platforms

**Syntax**    `mime-pattern object-name {  
                  value [value];  
                  }`

**Hierarchy Level**    `[edit security utm custom-objects]`

**Release Information**    Statement introduced in Junos OS Release 9.5.

**Description**    The gateway device uses MIME (Multipurpose Internet Mail Extension) types to decide which traffic is allowed to bypass various types of scanning.

**Options**

- ***object-name***—Name of the MIME object.
- ***value value***—Value of the MIME object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**    `security`—To view this statement in the configuration.  
                                     `security-control`—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- *UTM Content Filtering Feature Guide for Security Devices*

## mime-whitelist

---

### Supported Platforms

**Syntax**

```
mime-whitelist {  
  exception listname;  
  list listname {  
    exception listname;  
  }  
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus]

**Release Information** Statement introduced in Junos OS Release 9.5. Statement updated for Sophos antivirus support in Junos OS Release 11.1.

**Description** Configure the antivirus scanner to use MIME bypass lists and exception lists. You can use your own custom object lists, or you can use the default list that ships with the device called junos-default-bypass-mime.

**WARNING:** When you configure the MIME whitelist feature, be aware that, because header information in HTTP traffic can be spoofed, you cannot always trust HTTP headers to be legitimate. When a Web browser is determining the appropriate action for a given file type, it detects the file type without checking the MIME header contents. However, the MIME whitelist feature does refer to the MIME encoding in the HTTP header. For these reasons, it is possible in certain cases for a malicious website to provide an invalid HTTP header. For example, a network administrator might inadvertently add a malicious website to a MIME whitelist, and, because the site is in the whitelist, it will not be blocked by Sophos even though Sophos has identified the site as malicious in its database. Internal hosts would then be able to reach this site and could become infected.

---

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*

## no-autoupdate

---

### Supported Platforms

**Syntax** no-autoupdate;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine pattern-update]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update]  
[edit security utm feature-profile anti-virus sophos-engine pattern-update]

**Release Information** Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** Turn off automatic data file (pattern file) update for the Kaspersky Lab, Juniper Express, or Sophos engines.

**NOTE:** The data files used with Sophos are not typical virus pattern files; they are small files that help guide virus scanning logic. The full virus pattern database is stored on an external Sophos server called the Sophos Extensible List (SXL) server.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*

## no-intelligent-prescreening

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	no-intelligent-prescreening;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> scan-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	<p>Disables intelligent prescreening.</p> <p>Intelligent prescreening tells the antivirus module to begin scanning a file much earlier. In this case, the scan engine uses the first packet or the first several packets to determine if a file could possibly contain malicious code. The scan engine does a quick check on these first packets and if the scan engine finds that it is unlikely that the file is infected, it then determines that it is safe to bypass the normal scanning procedure.</p> <p>You can enable intelligent prescreening with the <b>intelligent-prescreening</b> statement.</p>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## no-notify-mail-recipient

---

### Supported Platforms

**Syntax** no-notify-mail-recipient;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options fallback-non-block]  
 [edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options fallback-non-block]  
 [edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options fallback-non-block]

**Release Information** Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.

**Description** Do not notify the e-mail recipient about errors returned by the antivirus scan engine when a fallback nonblocking action occurs.

You can specify that the e-mail recipient is to be notified with the **notify-mail-recipient** statement.

**Required Privilege Level** security—To view this statement in the configuration.  
 security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

- *UTM Express Antivirus Protection Feature Guide for Security Devices*

## no-notify-mail-sender (Security Fallback Block)

---

### Supported Platforms

**Syntax** no-notify-mail-sender;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options fallback-block]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options fallback-block]  
[edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options fallback-block]

**Release Information** Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** Do not notify the e-mail sender about errors returned by the antivirus scan engine when a fallback action occurs.

You can specify that the e-mail sender is to be notified with the **notify-mail-sender** statement.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## notification-options (Security Antivirus)

### Supported Platforms

<b>Syntax</b>	<pre>notification-options {   fallback-block {     administrator-email <i>email-address</i>;     allow-email;     custom-message <i>message</i>;     custom-message-subject <i>message-subject</i>;     display-host;     (notify-mail-sender   no-notify-mail-sender);     type (message   protocol-only);   }   fallback-non-block {     custom-message <i>message</i>;     custom-message-subject <i>message-subject</i>;     (notify-mail-recipient   no-notify-mail-recipient);   }   virus-detection {     custom-message <i>message</i>;     custom-message-subject <i>message-subject</i>;     (notify-mail-sender   no-notify-mail-sender);     type (message   protocol-only);   } }</pre>
<b>Hierarchy Level</b>	<pre>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i>] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i>] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i>]</pre>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	There are multiple notification options you can configure to trigger when a virus is detected.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	<pre>security—To view this statement in the configuration. security-control—To add this statement to the configuration.</pre>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## notify-mail-recipient

---

### Supported Platforms

**Syntax** notify-mail-recipient;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options fallback-non-block]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options fallback-non-block]  
[edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options fallback-non-block]

**Release Information** Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.

**Description** Notify the e-mail recipient about errors returned by the antivirus scan engine when a fallback nonblocking action occurs.

You can specify that the e-mail recipient is not to be notified with the **no-notify-mail-recipient** statement.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## out-of-resources

### Supported Platforms

<b>Syntax</b>	out-of-resources (block   (log-and-permit);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> fallback-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> fallback-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Virus scanning requires a great deal of memory and CPU resources. Due to resource constraints, memory allocation requests can be denied by the system. When out-of-resources occurs, scanning is aborted. The default action is block.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>block</b>—Log the error and deny the traffic</li> <li>• <b>log-and-permit</b>—Log the error and permit the traffic</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## password (Security Antivirus)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	password <i>password-string</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update proxy] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update proxy] [edit security utm feature-profile anti-virus sophos-engine pattern-update proxy]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Set the password for the proxy server.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## password-file

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	password-file (block   (log-and-permit);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> fallback-options]
<b>Description</b>	Password protected file is the error returned by the scan engine when the scanned file is protected by a password. The default action is log-and-permit.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>block</b>—Log the error and deny the traffic</li><li>• <b>log-and-permit</b>—Log the error and permit the traffic</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## pattern-update (Security Antivirus)

### Supported Platforms

<b>Syntax</b>	<pre> pattern-update {   email-notify {     admin-email <i>email-address</i>;     custom-message <i>message</i>;     custom-message-subject <i>message-subject</i>;   }   interval <i>value</i>;   no-autoupdate;   proxy {     password <i>password-string</i>;     port <i>port-number</i>;     server <i>address-or-url</i>;     username <i>name</i>;   }   url <i>url</i>; } </pre>
<b>Hierarchy Level</b>	<pre> [edit security utm feature-profile anti-virus juniper-express-engine] [edit security utm feature-profile anti-virus kaspersky-lab-engine] [edit security utm feature-profile anti-virus sophos-engine] </pre>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Updates to the pattern file are added as new viruses are discovered. You can configure the security device to regularly update the pattern file automatically, or you can update the file manually.
<b>Required Privilege Level</b>	<p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## pop3-profile (Security UTM Policy Antivirus)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	pop3-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> anti-virus]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the antivirus POP3 protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## port (Security Antivirus)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	port <i>port-number</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update proxy] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update proxy] [edit security utm feature-profile anti-virus sophos-engine pattern-update proxy]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Set the port number for the proxy server.
<b>Options</b>	<b>Range:</b> 0 through 65,535
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## profile (Security Antivirus Kaspersky Lab Engine)

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

**Syntax**

```

profile profile-name {
  fallback-options {
    content-size (block | log-and-permit);
    corrupt-file (block | log-and-permit);
    decompress-layer (block | log-and-permit);
    default (block | log-and-permit);
    engine-not-ready (block | log-and-permit);
    out-of-resources (block | (log-and-permit);
    password-file (block | (log-and-permit);
    timeout (block | log-and-permit);
    too-many-requests (block | log-and-permit);
  }
  notification-options {
    fallback-block {
      administrator-email email-address;
      allow-email;
      custom-message message;
      custom-message-subject message-subject;
      display-host;
      (notify-mail-sender | no-notify-mail-sender);
      type (message | protocol-only);
    }
    fallback-non-block {
      custom-message message;
      custom-message-subject message-subject;
      (notify-mail-recipient | no-notify-mail-recipient);
    }
    virus-detection {

  }
  trickling {
    timeout value;
  }
}

```

**Hierarchy Level** [edit security utm feature-profile anti-virus kaspersky-lab-engine]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

<b>Description</b>	Create a profile for the Kaspersky Lab engine. This profile includes all subsequent configuration options.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

---

## protocol-command

---

### Supported Platforms

<b>Syntax</b>	<pre>protocol-command <i>object-name</i> {     value [<i>value</i>]; }</pre>
<b>Hierarchy Level</b>	[edit security utm custom-objects]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Different protocols use different commands to communicate between servers and clients. By blocking or allowing certain commands, traffic can be controlled on the protocol command level.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b><i>object-name</i></b>—Name of the command-list object.</li><li>• <b><i>value value</i></b>—Value of the command-list object. You can configure multiple values separated by spaces and enclosed in square brackets.</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <a href="#">Understanding UTM Custom Objects on page 5</a></li></ul>

## proxy (Security Antivirus)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>proxy {   password <i>password-string</i>;   port <i>port-number</i>;   server <i>address-or-url</i>;   username <i>name</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update] [edit security utm feature-profile anti-virus sophos-engine pattern-update]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Update the pattern file on the proxy server.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## scan-extension

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	scan-extension <i>filename</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	For antivirus file extension scanning, configure the scan extension setting by specifying the name of the defined file extension list.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## scan-mode

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	scan-mode (all   by-extension);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	You can scan all content or scan content with specific file extensions. You can use a file extension list to define a set of file extensions that are used in file extension scan mode. The antivirus module can then only scan files with extensions on the scan-extension list.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>all</b>—Scan all files.</li><li>• <b>by-extension</b>—Scan only files with extensions specified in a file extension list custom object.</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## scan-options (Security Antivirus Kaspersky Lab Engine)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>scan-options {   content-size-limit <i>value</i>;   decompress-layer-limit <i>value</i>;   (intelligent-prescreening   no-intelligent-prescreening);   scan-extension <i>filename</i>;   scan-mode (all   by-extension);   timeout <i>value</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure the antivirus feature to scan specific types of traffic based on various scanning configuration parameters.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Junos OS UTM Library for Security Devices</i></li> <li><i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## server (Security Antivirus)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	server <i>address-or-url</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update proxy] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update proxy] [edit security utm feature-profile anti-virus sophos-engine pattern-update proxy]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Set the IP address or URL for the proxy server.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Junos OS UTM Library for Security Devices</i></li> <li><i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## smtp-profile (Security UTM Policy Antivirus)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	smtp-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> anti-virus]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the antivirus SMTP protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## timeout (Security Antivirus Fallback Options)

---

<b>Supported Platforms</b>	
<b>Syntax</b>	timeout (block   log-and-permit);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> fallback-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> fallback-options]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	Scanning a complex file could consume resources and time. If the time it is taking to scan exceeds the timeout setting in the antivirus profile, the processing is aborted and the content is either passed or blocked without completing the virus checking. The decision is made based on the timeout fallback option. The default action is block.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>block</b>—Log the error and deny the traffic</li><li>• <b>log-and-permit</b>—Log the error and permit the traffic</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## timeout (Security Antivirus Scan Options)

### Supported Platforms

**Syntax**    `timeout value;`

**Hierarchy Level**    `[edit security utm feature-profile anti-virus juniper-express-engine profile profile-name scan-options]`  
                           `[edit security utm feature-profile anti-virus kaspersky-lab-engine profile profile-name scan-options]`  
                           `[edit security utm feature-profile anti-virus sophos-engine profile profile-name scan-options]`

**Release Information**    Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description**    The scanning timeout value includes the time frame from when the scan request is generated to when the scan result is returned by the scan engine. The time range can be 1 to 1800 seconds. By default, it is 180 seconds.

**Required Privilege Level**    `security`—To view this statement in the configuration.  
                                       `security-control`—To add this statement to the configuration.

**Related Documentation**

tunnel {
    ipsec-group-vpn group-vpn;
    ipsec-vpn vpn-name;
    pair-policy pair-policy;
}
}
reject;
}
}

```

**Hierarchy Level** [edit security policies from-zone *zone-name*]

**Release Information** Statement introduced in Junos OS Release 8.5. Support for the **services-offload** and **junos-host** options added in Junos OS Release 11.4. Support for the **source-identity** option added in Junos OS Release 12.1. Support for the **ssl-termination-profile** and **web-redirect-to-https** options added in Junos OS Release 12.1X44-D10.

**Description** Specify a destination zone to be associated with the security policy.

- Options**
- **zone-name**—Name of the destination zone object.
  - **junos-host**—Default security zone for self-traffic of the device.

The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

---

## too-many-requests (Security Antivirus Fallback Options)

---

### Supported Platforms

**Syntax** too-many-requests (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* fallback-options]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* fallback-options]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** If the total number of messages received concurrently exceeds 4000, the content is either passed or blocked depending on the too-many-request fallback option. The default action is block. (The allowed request limit is not configurable.)

- Options**
- **block**—Log the error and deny the traffic
  - **log-and-permit**—Log the error and permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

- Related Documentation**
- *Junos OS UTM Library for Security Devices*
  - *UTM Full Antivirus Protection Feature Guide for Security Devices*

## trickling

### Supported Platforms

**Syntax**    `trickling {  
                  timeout value;  
                  }`

**Hierarchy Level**    `[edit security utm feature-profile anti-virus juniper-express-engine profile profile-name]  
                          [edit security utm feature-profile anti-virus kaspersky-lab-engine profile profile-name]  
                          [edit security utm feature-profile anti-virus sophos-engine profile profile-name]`

**Release Information**    Statement introduced in Junos OS Release 9.5. Statement updated for Sophos support in Junos OS Release 11.1.

**Description**    HTTP trickling is a mechanism used to prevent the HTTP client or server from timing-out during a file transfer or during antivirus scanning. HTTP Trickling is time-based and there is only one parameter to configure for this feature, which is the timeout Interval. By default, trickling is disabled.

**WARNING:** When you enable the trickling option, keep in mind that trickling might send part of a file to the client during its antivirus scan. It is therefore possible that some of the content could be received by the client before the file has been fully scanned.

**Options**    *value*—Timeout interval in seconds.  
              **Range:** 0 through 600 seconds

**Required Privilege Level**    security—To view this statement in the configuration.  
                                  security-control—To add this statement to the configuration.

**Related Documentation**    • *UTM Express Antivirus Protection Feature Guide for Security Devices*

## type (Security Antivirus Feature Profile)

---

### Supported Platforms

<b>Syntax</b>	type (juniper-express-engine   kaspersky-lab-engine   sophos-engine);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Statement updated for Sophos in Release 11.1 of Junos OS.
<b>Description</b>	Set the antivirus engine that will be used on the device. You can only have one engine type running and you must restart the device if you change engines.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## type (Security Fallback Block)

---

### Supported Platforms

<b>Syntax</b>	type (message   protocol-only);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-block]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	You can configure notifications for both fallback blocking and fallback nonblocking actions. With protocol-only notifications, a protocol-specific error code may be returned to the client.
<b>Options</b>	<ul style="list-style-type: none"><li>• message—Send a generic notification.</li><li>• protocol-only—Send a protocol-specific notification.</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## type (Security Virus Detection)

---

### Supported Platforms

**Syntax** type (message | protocol-only);

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options virus-detection]  
 [edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options virus-detection]  
 [edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options virus-detection]

**Release Information** Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.

**Description** When content is blocked because a virus is found or a scan error occurs, the client generally still receives a successful response code but with modified content (file replacement) containing a warning message. But with protocol-only notifications, a protocol-specific error code might be returned to the client.

- Options**
- message—Send a generic notification.
  - protocol-only—Send a protocol-specific notification.

**Required Privilege Level** security—To view this statement in the configuration.  
 security-control—To add this statement to the configuration.

**Related Documentation**

- *UTM Express Antivirus Protection Feature Guide for Security Devices*

## traceoptions (Security Antivirus)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	traceoptions flag <i>flag</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Define tracing operations for UTM antivirus features.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>flag</b>—Trace operation to perform. To specify more than one trace operation, include multiple <b>flag</b> statements.<ul style="list-style-type: none"><li>• <b>all</b>—Enable trace all antivirus trace options.</li><li>• <b>basic</b>—Trace antivirus module generic basic information.</li><li>• <b>detail</b>—Trace antivirus module generic detail information.</li><li>• <b>engine</b>—Trace scan engine information.</li><li>• <b>event</b>—Trace communication events between routing engine side processes.</li><li>• <b>ipc</b>—Trace communication events with Packet Forwarding Engine.</li><li>• <b>manager</b>—Trace antivirus manager process activities.</li><li>• <b>pattern</b>—Trace detail information of pattern loading.</li><li>• <b>sendmail</b>—Trace mail notifying process activities.</li><li>• <b>statistics</b>—Trace statistics information.</li><li>• <b>updater</b>—Trace pattern updater process activities.</li><li>• <b>worker</b>—Trace antivirus worker process activities.</li></ul></li></ul>
<b>Required Privilege Level</b>	trace—To view this statement in the configuration. trace-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## upload-profile (Security Antivirus FTP)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	upload-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> anti-virus ftp]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure a UTM policy for the antivirus FTP (upload) protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## url (Security Antivirus)

<b>Supported Platforms</b>	
<b>Syntax</b>	url <i>url</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update] [edit security utm feature-profile anti-virus sophos-engine pattern-update]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Specify the URL for the pattern database. You should not change the default URL unless you are experiencing problems with it and have called for support.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## url-pattern

---

### Supported Platforms

**Syntax**    `url-pattern object-name {  
                  value [value];  
                  }`

**Hierarchy Level**    [edit security utm custom-objects]

**Release Information**    Statement introduced in Junos OS Release 9.5.

**Description**    Use URL pattern lists to create custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

- Options**
- ***object-name***—Name of the URL list object.
  - ***value value***—Value of the URL list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**    security—To view this statement in the configuration.  
                                         security-control—To add this statement to the configuration.

- Related Documentation**

  - *Junos OS UTM Library for Security Devices*

## url-whitelist (Security Antivirus)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	url-whitelist <i>listname</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	A URL whitelist is a unique custom list that you define in which all the URLs or IP addresses in that list for a specified category are always bypassed for scanning.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## username (Security Antivirus)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	username <i>name</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update proxy] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update proxy] [edit security utm feature-profile anti-virus sophos-engine pattern-update proxy]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Set the username for the proxy server.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## virus-detection (Security Antivirus)

---

### Supported Platforms

<b>Syntax</b>	<pre>virus-detection {   custom-message <i>message</i>;   custom-message-subject <i>message-subject</i>;   (notify-mail-sender   no-notify-mail-sender);   type (message   protocol-only); }</pre>
<b>Hierarchy Level</b>	<pre>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i>   notification-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i>   notification-options] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i>   notification-options]</pre>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Configure a notification to send when a virus is detected.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## CHAPTER 15

# Administration

- [Monitoring Antivirus Sessions and Scan Results on page 481](#)
- [Operational Commands on page 485](#)

### Monitoring Antivirus Sessions and Scan Results

---

- [Monitoring Antivirus Scan Engine Status on page 481](#)
- [Monitoring Antivirus Session Status on page 482](#)
- [Monitoring Antivirus Scan Results on page 482](#)

### Monitoring Antivirus Scan Engine Status

**Supported Platforms** [LN Series](#), [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Purpose** Using the CLI, you can view the following scan engine status items:

Antivirus license key status

- View license expiration dates.

Scan engine status and settings

- View last action result.
- View default file extension list.

Antivirus pattern update server settings

- View update URL (HTTP or HTTPS-based).
- View update interval.

Antivirus pattern database status

- View auto update status.
- View last result of database loading.
- If the download completes, view database version timestamp virus record number.
- If the download fails, view failure reason.

**Action** In the CLI, enter the `user@host> show security utm anti-virus status` command.

Example status result:

```
AV Key Expire Date: 03/01/2010 00:00:00
Update Server: http://update.juniper-updates.net/AV/SRX210
interval: 60 minutes
auto update status: next update in 12 minutes
last result: new database loaded
AV signature version: 12/21/2008 00:35 GMT, virus records: 154018
Scan Engine Info: last action result: No error(0x00000000)
```

  - [Monitoring Antivirus Scan Results on page 482](#)

## Monitoring Antivirus Session Status

**Supported Platforms** [LN Series](#), [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Purpose** Using the CLI, you can view the following session status items:

Antivirus session status displays a snapshot of current antivirus sessions. It includes

- Maximum supported antivirus session numbers.
- Total allocated antivirus session numbers.
- Total freed antivirus session numbers.
- Current active antivirus session numbers.

**Action** In the CLI, enter the `user@host> show security utm session status` command.

- Related Documentation**

  - [Monitoring Antivirus Scan Engine Status on page 481](#)
  - [Monitoring Antivirus Scan Results on page 482](#)

## Monitoring Antivirus Scan Results

**Supported Platforms** [LN Series](#), [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

**Purpose** View statistics for antivirus requests, scan results, and fallback counters.

Scan requests provide

- The total number of scan request forwarded to the engine.
- The number of scan request being pre-windowed.
- The number of scan requests using scan-all mode.
- The number of scan requests using scan-by-extension mode.

Scan code counters provide

- Number of clean files.
- Number of infected files.
- Number of password protected files.
- Number of decompress layers.
- Number of corrupt files.
- When the engine is out of resources.
- When there is an internal error.

Fallback applied status provides either a log-and-permit or block result when the following has occurred

- Scan engine not ready.
- Maximum content size reached.
- Too many requests.
- Password protected file found.
- Decompress layer too large.
- Corrupt file found.
- Timeout occurred.
- Out of resources.
- Other.

**Action** To view antivirus scan results using the CLI editor, enter the **user@host> show security utm anti-virus statistics status** command.

To view antivirus scan results using J-Web:

1. Select **Monitor>Security>UTM>Anti-Virus**.

The following information becomes viewable in the right pane.

#### Antivirus license key status

- View license expiration dates.

#### Antivirus pattern update server settings

- View update URL (HTTP or HTTPS-based).
- View update interval.

#### Antivirus pattern database status

- View auto update status.
- View last result of database loading.
- If the download completes, view database version timestamp virus record number.
- If the download fails, view failure reason.

#### Antivirus statistics provide

- The number of scan request being pre-windowed.
- The total number of scan request forwarded to the engine.
- The number of scan requests using scan-all mode.
- The number of scan requests using scan-by-extension mode.

#### Scan code counters provide

- Number of clean files.
- Number of infected files.
- Number of password protected files.
- Number of decompress layers.
- Number of corrupt files.
- When the engine is out of resources.
- When there is an internal error.

Fallback applied status provides either a log-and-permit or block result when the following has occurred

- Scan engine not ready.
- Password protected file found.
- Decompress layer too large.
- Corrupt file found.
- Out of resources.
- Timeout occurred.
- Maximum content size reached.

- Too many requests.
  - Other.
2. You can click the **Clear Anti-Virus Statistics** button to clear all current viewable statistics and begin collecting new statistics.

## Operational Commands

---

- `clear security utm antivirus statistics`
- `request security utm anti-virus kaspersky-lab-engine`
- `show security policies`
- `show security utm status`
- `show security utm session`
- `show security utm anti-virus statistics`
- `show security utm anti-virus status`

## clear security utm antivirus statistics

---

### Supported Platforms

**Syntax** clear security utm anti-virus statistics

**Release Information** Command introduced in Junos OS Release 9.5. Support for Sophos Antivirus added in Junos OS Release 11.1.  
Support for UTM in chassis cluster added in Junos OS Release 11.4.

**Description** Clear antivirus statistics information. With chassis cluster support for UTM, statistics from both the nodes are cleared.

**Required Privilege Level** clear

**Related Documentation**

- [show security utm anti-virus statistics on page 316](#)
- [show security utm anti-virus status on page 318](#)
- [request security utm anti-virus juniper-express-engine on page 305](#)
- [request security utm anti-virus kaspersky-lab-engine on page 487](#)
- *Junos OS UTM Library for Security Devices*
- *UTM Express Antivirus Protection Feature Guide for Security Devices*

**Output Fields** This command produces no output.

### Sample Output

#### clear security utm antivirus statistics

```
user@host> clear security utm anti-virus statistics
```

## request security utm anti-virus kaspersky-lab-engine

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	request security utm anti-virus kaspersky-lab-engine
<b>Release Information</b>	Command introduced in Release 11.1 of Junos OS. Support for UTM in chassis cluster added in Release 11.4 of Junos OS.
<b>Description</b>	Manually update the full file-based antivirus pattern database using the commands described. You can update the full file-based antivirus pattern database automatically or manually. With full chassis cluster support for UTM this command is operational on both the nodes.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>pattern-delete</b> — Delete the current full file-based antivirus pattern database.</li> <li>• <b>pattern-reload</b> — Reload the full file-based antivirus pattern database.</li> <li>• <b>pattern-update</b> — Update the full file-based antivirus pattern database with the latest signatures.</li> </ul>
<b>Required Privilege Level</b>	maintenance
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request security utm anti-virus juniper-express-engine on page 305</a></li> <li>• <a href="#">clear security utm antivirus statistics on page 304</a></li> <li>• <a href="#">show security utm anti-virus statistics on page 316</a></li> <li>• <a href="#">show security utm anti-virus status on page 318</a></li> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">request security utm anti-virus kaspersky-lab-engine pattern-update on page 487</a>
<b>Output Fields</b>	request security utm anti-virus kaspersky-lab-engine pattern-update  When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### request security utm anti-virus kaspersky-lab-engine pattern-update

```
user@host> request security anti-virus kaspersky-lab-engine pattern-update
```

## show security policies

---

### Supported Platforms

**Syntax** show security policies  
<detail>  
<none>  
policy-name *policy-name*  
<detail>  
<global>

**Release Information** Command modified in Junos OS Release 9.2. Support for IPv6 addresses added in Junos OS Release 10.2. Support for IPv6 addresses in active/active chassis cluster configurations in addition to the existing support of active/passive chassis cluster configurations added in Junos OS Release 10.4. Support for wildcard addresses added in Junos OS Release 11.1. Support for global policy added in Junos OS Release 11.4. Support for services offloading added in Junos OS Release 11.4. Support for source-identities added in Junos OS Release 12.1. The **Description** output field added in Junos OS Release 12.1. Support for negated address added in Junos OS Release 12.1X45-D10. The output fields for Policy Statistics expanded, and the output fields for the **global** and **policy-name** options expanded to include from-zone and to-zone global match criteria in Junos OS Release 12.1X47-D10.

**Description** Display a summary of all security policies configured on the device. If a particular policy is specified, display information particular to that policy.

- Options**
- **none**—Display basic information about all configured policies.
  - **detail**—(Optional) Display a detailed view of all of the policies configured on the device.
  - **policy-name *policy-name***—(Optional) Display information about the specified policy.
  - **global**—Display information about global policies.

**Required Privilege Level** view

[show security policies policy-name p1 detail \(Negated Address\) on page 494](#)  
[show security policies global on page 495](#)

**Output Fields** Table 7 on page 188 lists the output fields for the **show security policies** command. Output fields are listed in the approximate order in which they appear.

**Table 10: show security policies Output Fields**

Field Name	Field Description
<b>From zone</b>	Name of the source zone.
<b>To zone</b>	Name of the destination zone.
<b>Policy</b>	Name of the applicable policy.
<b>Description</b>	Description of the applicable policy.
<b>State</b>	Status of the policy: <ul style="list-style-type: none"> <li>• <b>enabled:</b> The policy can be used in the policy lookup process, which determines access rights for a packet and the action taken in regard to it.</li> <li>• <b>disabled:</b> The policy cannot be used in the policy lookup process, and therefore it is not available for access control.</li> </ul>
<b>Index</b>	Internal number associated with the policy.
<b>Sequence number</b>	Number of the policy within a given context. For example, three policies that are applicable in a from-zoneA-to-zoneB context might be ordered with sequence numbers 1, 2, 3. Also, in a from-zoneC-to-zoneD context, four policies might have sequence numbers 1, 2, 3, 4.
<b>Source addresses</b>	For standard display mode, the names of the source addresses for a policy. Address sets are resolved to their individual names.  For detail display mode, the names and corresponding IP addresses of the source addresses for a policy. Address sets are resolved to their individual address name-IP address pairs.
<b>Destination addresses</b>	Name of the destination address (or address set) as it was entered in the destination zone's address book. A packet's destination address must match this value for the policy to apply to it.
<b>Source addresses (excluded)</b>	Name of the source address excluded from the policy.
<b>Destination addresses (excluded)</b>	Name of the destination address excluded from the policy.
<b>Source identities</b>	One or more user roles specified for a policy.

Table 10: show security policies Output Fields (*continued*)

Field Name	Field Description
Applications	<p>Name of a preconfigured or custom application whose type the packet matches, as specified at configuration time.</p> <ul style="list-style-type: none"> <li>• <b>IP protocol</b>: The Internet protocol used by the application—for example, TCP, UDP, ICMP.</li> <li>• <b>ALG</b>: If an ALG is explicitly associated with the policy, the name of the ALG is displayed. If <b>application-protocol ignore</b> is configured, ignore is displayed. Otherwise, 0 is displayed. However, even if this command shows ALG: 0, ALGs might be triggered for packets destined to well-known ports on which ALGs are listening, unless ALGs are explicitly disabled or when <b>application-protocol ignore</b> is not configured for custom applications.</li> <li>• <b>Inactivity timeout</b>: Elapsed time without activity after which the application is terminated.</li> <li>• <b>Source port range</b>: The low-high source port range for the session application.</li> </ul>
Destination Address Translation	<p>Status of the destination address translation traffic:</p> <ul style="list-style-type: none"> <li>• <b>drop translated</b>—Drop the packets with translated destination addresses.</li> <li>• <b>drop untranslated</b>—Drop the packets without translated destination addresses.</li> </ul>
Application Firewall	<p>An application firewall includes the following:</p> <ul style="list-style-type: none"> <li>• <b>Rule-set</b>—Name of the rule set.</li> <li>• <b>Rule</b>—Name of the rule. <ul style="list-style-type: none"> <li>• <b>Dynamic applications</b>—Name of the applications.</li> <li>• <b>Dynamic application groups</b>—Name of the application groups.</li> <li>• <b>Action</b>—The action taken with respect to a packet that matches the application firewall rule set. Actions include the following: <ul style="list-style-type: none"> <li>• <b>permit</b></li> <li>• <b>deny</b></li> </ul> </li> </ul> </li> <li>• <b>Default rule</b>—The default rule applied when the identified application is not specified in any rules of the rule set.</li> </ul>
Action or Action-type	<ul style="list-style-type: none"> <li>• The action taken in regard to a packet that matches the policy's tuples. Actions include the following: <ul style="list-style-type: none"> <li>• <b>permit</b></li> <li>• <b>firewall-authentication</b></li> <li>• <b>tunnel ipsec-vpn <i>vpn-name</i></b></li> <li>• <b>pair-policy <i>pair-policy-name</i></b></li> <li>• <b>source-nat pool <i>pool-name</i></b></li> <li>• <b>pool-set <i>pool-set-name</i></b></li> <li>• <b>interface</b></li> <li>• <b>destination-nat <i>name</i></b></li> <li>• <b>deny</b></li> <li>• <b>reject</b></li> <li>• <b>services-offload</b></li> </ul> </li> </ul>
Session log	<p>Session log entry that indicates whether the <b>at-create</b> and <b>at-close</b> flags were set at configuration time to log session information.</p>

Table 10: show security policies Output Fields (*continued*)

Field Name	Field Description
<b>Scheduler name</b>	Name of a preconfigured scheduler whose schedule determines when the policy is active and can be used as a possible match for traffic.
<b>Policy statistics</b>	<ul style="list-style-type: none"> <li>• <b>Input bytes</b>—The total number of bytes presented for processing by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of bytes presented for processing by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of bytes presented for processing by the device from the reply direction.</li> </ul> </li> <li>• <b>Output bytes</b>—The total number of bytes actually processed by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of bytes from the initial direction actually processed by the device.</li> <li>• <b>Reply direction</b>—The number of bytes from the reply direction actually processed by the device.</li> </ul> </li> <li>• <b>Input packets</b>—The total number of packets presented for processing by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of packets presented for processing by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of packets presented for processing by the device from the reply direction.</li> </ul> </li> <li>• <b>Output packets</b>—The total number of packets actually processed by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of packets actually processed by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of packets actually processed by the device from the reply direction.</li> </ul> </li> <li>• <b>Session rate</b>—The total number of active and deleted sessions.</li> <li>• <b>Active sessions</b>—The number of sessions currently present because of access control lookups that used this policy.</li> <li>• <b>Session deletions</b>—The number of sessions deleted since system startup.</li> <li>• <b>Policy lookups</b>—The number of times the policy was accessed to check for a match.</li> </ul> <p><b>NOTE:</b> Configure the Policy P1 with the <b>count</b> option to display policy statistics.</p>

## show security utm status

---

### Supported Platforms

**Syntax**    show security utm status

**Release Information**    Command introduced in Junos OS Release 9.5.  
Support for UTM in chassis cluster added in Junos OS Release 11.4.

**Description**    Display whether the UTM service is running or not and status of both the nodes (with full chassis cluster support for UTM).

**Required Privilege Level**    view

**Related Documentation**

- [clear security utm session on page 40](#)
- [show security utm session on page 315](#)
- *Junos OS UTM Library for Security Devices*

**Output Fields**    show security utm status

Output fields are listed in the approximate order in which they appear.

## show security utm status

```
user@host> show security utm status
UTM service status: Running
```

## show security utm session

---

### Supported Platforms

**Syntax** show security utm session

**Release Information** Command introduced in Junos OS Release 9.5.  
Support for UTM in chassis cluster added in Junos OS Release 11.4.

**Description** Display general UTM session information including all allocated sessions and active sessions. Also, display information from both nodes in a chassis cluster.

**Required Privilege Level** view

**Related Documentation**

- [clear security utm session on page 40](#)
- [show security utm status on page 43](#)

## Sophos Antivirus Protection Overview

### Supported Platforms [SRX Series](#)

Sophos antivirus scanning is offered as a less CPU-intensive alternative to the full file-based antivirus feature. Sophos supports the same protocols as full antivirus and functions in much the same manner; however, it has a smaller memory footprint and is compatible with lower end devices that have less memory.

Sophos antivirus is an in-the-cloud antivirus solution. The virus pattern and malware database is located on external servers maintained by Sophos (Sophos Extensible List) servers, thus there is no need to download and maintain large pattern databases on the Juniper device. The Sophos antivirus scanner also uses a local internal cache to maintain query responses from the external list server to improve lookup performance.

Because a significant amount of traffic processed by Juniper Unified Threat Management (UTM) is HTTP based, Uniform Resource Identifier (URI) checking is used to effectively prevent malicious content from reaching the endpoint client or server. The following checks are performed for HTTP traffic: URI lookup, true file type detection, and file checksum lookup. The following application layer protocols are supported: HTTP, FTP, SMTP, POP3 and IMAP.

- *Junos OS UTM Library for Security Devices*

## Sophos Antivirus Features

### Supported Platforms [SRX Series](#)

Sophos Antivirus has the following main features:

- **Sophos Antivirus Expanded MIME Decoding Support**—Sophos antivirus offers decoding support for HTTP, POP3, SMTP, and IMAP. MIME decoding support includes the following for each supported protocol:
  - Multipart and nested header decoding
  - Base64 decoding, printed quote decoding, and encoded word decoding in the subject field
- **Sophos Antivirus Scan Result Handling**—With Sophos antivirus, the TCP traffic is closed gracefully when a virus is found and the data content is dropped.

The following fail mode options are supported: content-size, default, engine-not-ready, out-of-resource, timeout, and too-many-requests. You can set the following actions: block, log-and-permit, and permit. Fail mode handling of supported options with Sophos is much the same as with full antivirus.

- **Sophos Uniform Resource Identifier Checking**—Sophos provides Uniform Resource Identifier (URI) checking, which is similar to anti-spam realtime blackhole list (RBL) lookups. URI checking is a way of analyzing URI content in HTTP traffic against the Sophos database to identify malware or malicious content. Because malware is predominantly static, a checksum mechanism is used to identify malware to improve performance. Files that are capable of using a checksum include: .exe, .zip, .rar, .swf, .pdf, and .ole2 (doc and xls).

**NOTE:** If you have a Juniper device protecting an internal network that has no HTTP traffic, or has Web servers that are not accessible to the outside world, you may want to turn off URI checking. If the Web servers are not accessible to the outside world, it is unlikely that they contain URI information that is in the Sophos URI database. URI checking is on by default.

## Understanding Sophos Antivirus Data File Update

### Supported Platforms [SRX Series](#)

Sophos antivirus uses a small set of data files that need to be updated periodically. These data files only contain information on guiding scanning logic and do not contain the full pattern database. The main pattern database, which includes protection against critical viruses, URI checks, malware, worms, Trojans, and spyware, is located on remote Sophos Extensible List servers maintained by Sophos.

The Sophos data files are updated over HTTP or HTTPS and can be updated manually or scheduled to update automatically. This is similar functionality to that found in the Full Antivirus solution, but with some minor differences:

- With Sophos antivirus, the signature database auto-update interval is once a day by default. This interval can be changed.
- With Sophos, there is no interruption in virus scanning capability during the data file update. If the update fails, the existing data files will continue to be used.
- By default, the URL for Sophos antivirus data file update is <http://update.juniper-updates.net/SAV/>.

**NOTE:** The Sophos antivirus scanning feature is a separately licensed subscription service. When your antivirus license key expires, functionality will no longer work because the pattern lookup database is located on remote Sophos servers. You have a 30-day grace period in which to update your license.

- *Junos OS UTM Library for Security Devices*

## Comparison of Sophos Antivirus to Kaspersky Antivirus

### Supported Platforms [SRX Series](#)

Sophos Antivirus is much like Juniper Express Antivirus and also has similarities to the Full Antivirus feature:

- Unlike the Juniper Express and Full Antivirus solutions, the antivirus and malware database for Sophos is stored on a group of remote Sophos Extensible List servers. Queries are performed using the DNS protocol. Sophos maintains these servers, so there is no need to download and maintain large pattern databases on the Juniper device. Because the database is remote, there is no size limitation and there is a quicker response to new virus outbreaks.

.....

**NOTE:** Sophos antivirus uses a set of data files that need to be updated on a regular basis. These are not typical virus pattern files; they are a set of small files that help guide virus scanning logic. You can manually download the data files or set up automatic download.

.....

- Sophos does not provide the same prescreening detection as Kaspersky Antivirus. Sophos does provide a similar solution that is part of the Sophos engine and cannot be turned on and off.
- The Sophos antivirus scanning feature is a separately licensed subscription service. Also, the pattern lookup database is located on remote servers maintained by Sophos, so when your antivirus license key expires, functionality will no longer work. You have a 30-day grace period in which to update your license.

- [Example: Configuring Sophos Antivirus Feature Profile on page 513](#)
- [Example: Configuring Sophos Antivirus UTM Policies on page 520](#)
- [Example: Configuring Sophos Antivirus Firewall Security Policies on page 521](#)

### Sophos Antivirus Configuration Overview

#### Supported Platforms [SRX Series](#)

Sophos antivirus is part of the Unified Threat Management (UTM) feature set, so you first configure UTM options (custom objects), configure the Sophos Feature, then create a UTM policy and a security policy. The security policy controls all traffic that is forwarded by the device, and the UTM policy specifies which parameters to use to scan traffic. The UTM policy is also used to bind a set of protocols to one or more UTM feature profiles, including Sophos antivirus in this case.

You must complete the following tasks to configure Sophos antivirus:

1. Configure UTM custom objects and MIME lists. See [“Example: Configuring Sophos Antivirus Custom Objects” on page 510](#),
2. Configure the Sophos antivirus feature profile. See [“Example: Configuring Sophos Antivirus Feature Profile” on page 513](#).
3. Configure a UTM policy. See [“Example: Configuring Sophos Antivirus UTM Policies” on page 520](#)
4. Configure a security policy. See [“Example: Configuring Sophos Antivirus Firewall Security Policies” on page 521](#).

## Example: Configuring Sophos Antivirus Custom Objects

### Supported Platforms [SRX Series](#)

This example shows you how to create UTM global custom objects to be used with Sophos antivirus.

- [Requirements on page 510](#)
- [Overview on page 510](#)
- [Configuration on page 510](#)
- [Verification on page 512](#)

---

### Requirements

Before you begin, read about UTM custom objects. See "[Understanding UTM Custom Objects](#)" on page 5.

---

### Overview

Configure MIME lists. This includes creating a MIME whitelist and a MIME exception list for antivirus scanning. In this example, you bypass scanning of QuickTime videos, unless if they contain the MIME type quicktime-inappropriate.

**WARNING:** When you configure the MIME whitelist feature, be aware that, because header information in HTTP traffic can be spoofed, you cannot always trust HTTP headers to be legitimate. When a Web browser is determining the appropriate action for a given file type, it detects the file type without checking the MIME header contents. However, the MIME whitelist feature does refer to the MIME encoding in the HTTP header. For these reasons, it is possible in certain cases for a malicious website to provide an invalid HTTP header. For example, a network administrator might inadvertently add a malicious website to a MIME whitelist, and, because the site is in the whitelist, it will not be blocked by Sophos even though Sophos has identified the site as malicious in its database. Internal hosts would then be able to reach this site and could become infected.

---

### Configuration

#### GUI Step-by-Step Procedure

To configure a MIME list:

1. Click the **Configure** tab from the taskbar, and then select **Security>UTM>Custom Objects**.
2. Click the **MIME Pattern List** tab and then click **Add**
3. In the MIME Pattern Name box, type **avmime2**.
4. In the MIME Pattern Value box, type **video/quicktime**, and click **Add**.

5. In the MIME Pattern Value box, type **image/x-portable-anympa**, and click **Add**.
6. In the MIME Pattern Value box, type **x-world/x-vrml**, and click **Add**.

To configure a MIME exception list:

1. Click the **Configure** tab from the taskbar, and then select **Security>UTM>Custom Objects**.
2. Click the **MIME Pattern List** tab and then select **Add**.
3. In the MIME Pattern Name box, type **exception-avmime2**.
4. In the MIME Pattern Value box, type **video/quicktime-inappropriate** and click **Add**.

Configure a URL pattern list (whitelist) of URLs or addresses that will be bypassed by antivirus scanning. After you create the URL pattern list, you will create a custom URL category list and add the pattern list to it.

**NOTE:** Because you use URL pattern lists to create custom URL category lists, you must configure URL pattern list custom objects before you configure custom URL category lists.

To configure a URL pattern whitelist:

1. Click the **Configure** tab from the taskbar, and then select **Security>UTM>Custom Objects**.
2. Click the **URL Pattern List** tab, and then click **Add**.
3. In the URL Pattern Name box, enter **urlist2**.
4. In the URL Pattern Value box, enter **http://example**. (You can also use the IP address of the server instead of the URL.)

Save your configuration:

1. Click **OK** to check your configuration and save it as a candidate configuration.
2. If you are done configuring the device, click **Actions>Commit**.

**NOTE:** URL pattern wildcard support—The wildcard rule is as follows: `\*\.[]\?*`  and you must precede all wildcard URLs with `http://`. You can use “\*” only if it is at the beginning of the URL and is followed by a “.”. You can only use “?” at the end of the URL.

The following wildcard syntax is supported: `http://*.example`, `http://www.example.ne?`, `http://www.example.n??`. The following wildcard syntax is not supported: `*example`, `www.example.ne?`, `http://*example`, `http://*`.

**Step-by-Step Procedure** To configure antivirus protection using the CLI, you must create your custom objects in the following order:

1. Create the MIME whitelist.

```
[edit security utm]
user@host# set custom-objects mime-pattern avmime2 value [video/quicktime
image/x-portable-anymap x-world/x-vrml]
```

Create the MIME exception list.

```
[edit security utm]
user@host# set custom-objects mime-pattern exception-avmime2 value
[video/quicktime-inappropriate]
```

2. Configure a URL pattern list (whitelist) of URLs or addresses that you want to bypass. After you create the URL pattern list, you create a custom URL category list and add the pattern list to it. Configure a URL pattern list custom object by creating the list name and adding values to it as follows.

**NOTE:** Because you use URL pattern lists to create custom URL category lists, you must configure URL pattern list custom objects before you configure custom URL category lists.

```
[edit security utm]
user@host# set custom-objects url-pattern urllist2 value [http://www.example.net
192.168.1.5]
```

**NOTE:** URL pattern wildcard support—The wildcard rule is as follows: `\*\.[ ]\?*` and you must precede all wildcard URLs with `http://`. You can only use “\*” if it is at the beginning of the URL and is followed by a “.”. You can only use “?” at the end of the URL.

The following wildcard syntax is supported: `http://*.example.net`, `http://www.example.ne?`, `http://www.example.n??`. The following wildcard syntax is not supported: `*example.net`, `www.example.ne?`, `http://*example.net`, `http://*`.

3. Configure a custom URL category list custom object by using the URL pattern list `urllist2` that you created earlier:

```
[edit security utm]
user@host# set custom-objects custom-url-category custurl2 value urllist2
```

---

### Verification

To verify the configuration, enter the **show security utm custom-objects** command.

- Related Documentation**
- [Sophos Antivirus Protection Overview on page 505](#)
  - [Sophos Antivirus Configuration Overview on page 509](#)
  - [Example: Configuring Sophos Antivirus Feature Profile on page 513](#)
  - [Understanding UTM Custom Objects on page 5](#)
  - [Junos OS UTM Library for Security Devices](#)

## Example: Configuring Sophos Antivirus Feature Profile

**Supported Platforms**   [SRX Series](#)

This example shows you how to configure a Sophos antivirus profile that defines the parameters that will be used for virus scanning.

- [Requirements on page 513](#)
- [Overview on page 513](#)
- [Configuration on page 514](#)
- [Verification on page 519](#)

### Requirements

---

Before you begin:

- Install a Sophos antivirus license. See the *Installation and Upgrade Guide for Security Devices*.
- Configure custom objects for UTM. See [“Example: Configuring Sophos Antivirus Custom Objects” on page 510](#).

### Overview

---

The following configuration defines Sophos as the antivirus engine and sets parameters, such as the data file update interval, notification options for administrators, fallback options, and file size limits.

## Configuration

### GUI Step-by-Step Procedure

**NOTE:** The following example shows you how to create a custom Sophos profile. If you want to use the Juniper Networks preconfigured profile, use the profile named `junos-sophos-av-defaults` in your UTM policy. See [“Example: Configuring Sophos Antivirus UTM Policies” on page 520](#).

1. Select and configure the engine type. Because you are configuring Sophos antivirus, you configure `sophos-engine`:
  - a. Click the **Configure** tab from the taskbar, and then select **Security>UTM>Anti-Virus**.
  - b. Click the **Global Options** tab and then click **Sophos**.
  - c. Click **OK** and commit your changes.
  - d. Restart the device to enable Sophos as the antivirus engine.
2. Return to the antivirus Global Options screen as you did in step 1, and set the following parameters:
  - a. In the MIME whitelist list, select **exception-avmime2**.
  - b. In the URL whitelist list, select **custurl2**.
  - c. In the Pattern update interval (sec) box, type **2880**.
  - d. In the box, type the e-mail address that will receive SophosAdmin e-mail data file update notifications. For example - `admin@example.net`.
  - e. In the Custom Message box, type **The Sophos data file update on the SRX240 has been completed**. In the Custom message subject box, type **Sophos Data File Updated**.
  - f. Click **OK** to check your configuration and save it as a candidate configuration.
3. Configure a profile for the `sophos-engine` and set parameters.
  - a. Click the **Configure** tab from the taskbar and then select **Security>UTM>Anti-Virus**. Click **Add**.
  - b. In the Add profile box, click the **Main** tab.
  - c. In the Profile name box, type **sophos-profl**.
  - d. In the Trickling timeout box, type **180**.

**WARNING:** When enabling the trickling option, it's important to understand that trickling may send part of the file to the client during the antivirus scan. It is possible that some of the content could be

received by the client and the client may become infected before the file is fully scanned.

- 
- e. URI checking is on by default. To turn it off, clear **yes** in the URI check box.
  - f. In the Content size Limit box, type **20000**.
  - g. In the Scan engine timeout box, type **1800**.
4. Configure fallback settings by clicking the **Fallback settings** tab. In this example, all fallback options are set to log and permit. Click **Log and permit** for the following items: Default action, Content size, Engine not ready, Timeout, Out of resource, Too many requests.
  5. Configure notification options by clicking the **Notification options** tab. You can configure notifications for both fallback blocking and fallback nonblocking actions and for virus detection.  
To configure notifications for Fallback settings:
    - a. For Notification type, click **Protocol**.
    - b. For Notify mail sender, click **yes**.
    - c. In the Custom message box, type **Fallback block action occurred**.
    - d. In the Custom message subject box, type **\*\*\*Antivirus fallback Alert\*\*\***.
  6. To configure notification options for virus detection, click the **Notification options cont...** tab.
    - a. For the Notification type option button, select **Protocol**.
    - b. For the Notify mail sender option button, select **yes**.
    - c. In the Custom message box, type **Virus has been detected**.
    - d. In the Custom message subject box, type **\*\*\*Virus detected\*\*\***.
  7. Click **OK** to check your configuration and save it as a candidate configuration.
  8. If you are done configuring the device, click **Actions>Commit**.

**Step-by-Step  
Procedure**

To configure the Sophos antivirus feature profile using the CLI:

**NOTE:** The following example shows you how to create a custom Sophos profile. If you want to use the Juniper Networks preconfigured profile, use the profile named `junos-sophos-av-defaults` in your UTM policy. See [“Example: Configuring Sophos Antivirus UTM Policies” on page 520](#).

1. Select and configure the engine type. Because you are configuring Sophos antivirus, you configure `sophos-engine`.

```
[edit]
user@host# set security utm feature-profile anti-virus type sophos-engine
```

2. Commit the configuration, and restart the device. After the device restarts, enter configuration mode again.

3. Select a time interval for updating the data files. The default antivirus pattern-update interval is 1440 minutes (every 24 hours). You can choose to leave this default, or you can change it. You can also force a manual update, if needed. To change the default from every 24 hours to every 48 hours:

```
[edit security utm feature-profile anti-virus]
user@host# set sophos-engine pattern-update interval 2880
```

4. Configure the network device with the proxy server details, to download the pattern update from a remote server:

```
[edit security utm feature-profile anti-virus]
user@host# set sophos-engine pattern-update proxy
```

5. In most circumstances, you will not need to change the URL to update the pattern database. If you do need to change this option, use the following command:

```
[edit security utm feature-profile anti-virus]
user@host# set sophos-engine pattern-update url
http://www.example.net/test-download
```

6. You can configure the device to notify a specified administrator when data files are updated. This is an e-mail notification with a custom message and a custom subject line.

```
[edit security utm feature-profile anti-virus]
user@host# set sophos-engine pattern-update email-notify admin-email
admin@example.net custom-message "Sophos antivirus data file was updated"
custom-message-subject "AV data file updated"
```

7. Configure a list of fallback options as block, log and permit, or permit. The default setting is log-and-permit. You can use the default settings, or you can change them.

Configure the content size action. In this example, if the content size is exceeded, the action taken is block.

First create the profile named `sophos-profl`.

```
[edit security utm feature-profile anti-virus]
user@host# edit sophos-engine profile sophos-profl
```

Configure the content size fallback-option to block.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-profl]
user@host# set fallback-options content-size block
```

Configure the default fallback option to log-and-permit.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-profl]
user@host# set fallback-options default log-and-permit
```

Configure log-and-permit if the antivirus engine is not ready.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-profl]
user@host# set fallback-options engine-not-ready log-and-permit
```

Configure log-and-permit if the device is out of resources.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-profl]
user@host# set fallback-options out-of-resources log-and-permit
```

Configure log-and-permit if a virus scan timeout occurs.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-profl]
user@host# set fallback-options timeout log-and-permit
```

Configure log-and-permit if there are too many requests for the virus engine to handle.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-profl]
user@host# set fallback-options too-many-requests log-and-permit
```

8. Configure notification options. You can configure notifications for fallback blocking, fallback nonblocking actions, and virus detection.

In this step, configure a custom message for the fallback blocking action and send a notification for protocol-only actions to the administrator and the sender.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-profl]
user@host# set notification-options fallback-block custom-message ***Fallback
block action occurred*** custom-message-subject Antivirus Fallback Alert
notify-mail-sender type protocol-only allow email administrator-email
admin@example.net
```

9. Configure a notification for protocol-only virus detection, and send a notification.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-profl]
user@host# set notification-options virus-detection type protocol-only
notify-mail-sender custom-message-subject ***Virus detected***
custom-message Virus has been detected
```

10. Configure content size parameters.

**NOTE:** When you configure the content-size value, keep in mind that in certain cases, content size is available in the protocol headers, so the max-content-size fallback is applied before a scan request is sent. However, in many cases, content size is not provided in the protocol headers. In these cases, the TCP payload is sent to the antivirus scanner and accumulates until the end of the payload. If the accumulated payload exceeds the maximum content size value, then max-content-size fallback is applied. The default fallback action is log and permit, so you may want to change this option to block, in which case such a packet is dropped and a block message is sent to the client.

In this example, if the content size exceeds 20 MB, the packet is dropped.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-prof1]
user@host# set scan-options content-size-limit 20000
```

11. URI checking is on by default. To turn off URI checking:

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-prof1]
user@host# set scan-options no-uri-check
```

12. Configure the timeout setting for the scanning operation to 1800 seconds.

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-prof1]
user@host# set scan-options timeout 1800
```

13. The Sophos Extensible List servers contain the virus and malware database for scanning operations. Set the response timeout for these servers to 3 seconds (the default is 2 seconds).

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-prof1]
user@host# set scan-options sxl-timeout 3
```

14. Configure the Sophos Extensible List server retry option to 2 retries (the default is 1).

```
[edit security utm feature-profile anti-virus sophos-engine profile sophos-prof1]
user@host# set scan-options sxl-retry 2
```

15. Configure the trickling setting to 180 seconds. If you use trickling, you can also set timeout parameters. Trickling applies only to HTTP. HTTP trickling is a mechanism used to prevent the HTTP client or server from timing out during a file transfer or during antivirus scanning.

**WARNING:** When you enable the trickling option, keep in mind that trickling might send part of a file to the client during its antivirus scan. It is therefore possible that some of the content could be received by the client before the file has been fully scanned.

```
[edit security utm feature-profile anti-virus]
user@host# set sophos-engine profile sophos-prof1 trickling timeout 180
```

16. Configure the antivirus module to use MIME bypass lists and exception lists. You can use your own custom object lists, or you can use the default list that ships with the device called `junos-default-bypass-mime`. In this example, you use the lists that you set up earlier.

```
[edit security utm feature-profile anti-virus]
user@host# set mime-whitelist list avmime2
[edit security utm feature-profile anti-virus]
user@host# set mime-whitelist list exception-avmime2
```

17. Configure the antivirus module to use URL bypass lists. If you are using a URL whitelist, this is a custom URL category you have previously configured as a custom object. URL whitelists are valid only for HTTP traffic. In this example you use the lists that you set up earlier.

```
[edit security utm feature-profile anti-virus]
user@host# set url-whitelist custurl2
```

### Verification

To verify your feature profile configuration, run the **show security utm feature-profile anti-virus** command.

#### *Obtaining Information About the Current Antivirus Status*

**Action** From operational mode, enter the **show security utm anti-virus status** command to view the antivirus status.

```
user@host>show security utm anti-virus status
```

- Meaning**
- Antivirus key expire date—The license key expiration date.
  - Update server—URL for the data file update server.
    - Interval—The time period, in minutes, when the device will update the data file from the update server.
    - Pattern update status—When the data file will be updated next, displayed in minutes.
    - Last result—Result of the last update. If you already have the latest version, this will display **already have latest database**.
  - Antivirus signature version—Version of the current data file.
  - Scan engine type—The antivirus engine type that is currently running.
  - Scan engine information—Result of the last action that occurred with the current scan engine.

## Example: Configuring Sophos Antivirus UTM Policies

### Supported Platforms [SRX Series](#)

This example shows how to create a UTM policy for Sophos antivirus.

- [Requirements on page 520](#)
- [Overview on page 520](#)
- [Configuration on page 520](#)
- [Verification on page 521](#)

---

### Requirements

Before you create the UTM policy, create custom objects and the Sophos feature profile.

1. Configure UTM custom objects and MIME lists. See [“Example: Configuring Sophos Antivirus Custom Objects” on page 510](#).
2. Configure the Sophos antivirus feature profile. See [“Example: Configuring Sophos Antivirus Feature Profile” on page 513](#).

---

### Overview

After you have created an antivirus feature profile, you configure a UTM policy for an antivirus scanning protocol and attach this policy to a feature profile. In this example, HTTP will be scanned for viruses, as indicated by the **http-profile** statement. You can scan other protocols as well by creating different profiles or adding other protocols to the profile, such as: **imap-profile**, **pop3-profile**, and **smtp-profile**.

---

### Configuration

#### GUI Step-by-Step Procedure

To configure a UTM policy for Sophos antivirus:

1. Click the **Configure** tab from the taskbar, and then select **Security>Policy>UTM Policies**. Then click **Add**.
2. Click the **Main** tab. In the Policy name box, type **utmp3**.
3. Click the **Anti-Virus profiles** tab. In the HTTP profile list, select **sophos-profl**.
4. Click **OK** to check your configuration and save it as a candidate configuration.
5. If you are done configuring the device, select **Actions>Commit**.

#### Step-by-Step Procedure

To configure a UTM policy for Sophos antivirus:

1. Go to the edit security utm hierarchy.  

```
[edit]  
user@host# edit security utm
```
2. Create the UTM policy utmp3 and attach it to the http-profile sophos-profl.  

```
[edit security utm]  
user@host# set utm-policy utmp3 anti-virus http-profile sophos-profl
```

**NOTE:** You can use the default Sophos feature profile settings by replacing `sophos-profl` in the above statement with `junos-sophos-av-defaults`.

### Verification

To verify the configuration, enter the **show security utm utm-policy utmp3** command.

## Example: Configuring Sophos Antivirus Firewall Security Policies

### Supported Platforms [SRX Series](#)

This example shows how to create a security policy for Sophos antivirus.

- [Requirements on page 521](#)
- [Overview on page 521](#)
- [Configuration on page 522](#)
- [Verification on page 523](#)

### Requirements

Before you create the security policy, create custom objects, the Sophos feature profile, and the UTM policy.

1. Configure UTM custom objects and MIME lists. See [“Example: Configuring Sophos Antivirus Custom Objects” on page 510](#).
2. Configure the Sophos antivirus feature profile. See [“Example: Configuring Sophos Antivirus Feature Profile” on page 513](#).
3. Configure a UTM policy. See [“Example: Configuring Sophos Antivirus UTM Policies” on page 520](#).

### Overview

Create a firewall security policy that will cause traffic from the untrust zone to the trust zone to be scanned by Sophos antivirus using the feature profile settings defined in [“Example: Configuring Sophos Antivirus Feature Profile” on page 513](#). Because the match application configuration is set to any, all application types will be scanned.

## Configuration

---

### GUI Step-by-Step Procedure

To configure a security policy for Sophos antivirus:

1. Configure the untrust to trust policy to match any source address or destination address, and select the applications to be scanned to **any**.
  - a. Click the **Configure** tab from the taskbar, and then select **Security>Policy>FW Policies**. Then select **Add**.
  - b. In the Policy Name box, type **p3**
  - c. In the Policy Action box, select **permit**.
  - d. In the From Zone list, select **untrust**.
  - e. In the To Zone list, select **trust**.
  - f. In the Source Address and Destination Address boxes, make sure that Matched is set to **any**.
  - g. In the Applications boxes, select **any** from the Application/Sets list, and move it to the Matched list.
2. Attach the UTM policy named **utmp3** to the firewall security policy. This will cause matched traffic to be scanned by the Sophos antivirus feature.
  - a. From the Edit Policy box, click the **Application Services** tab.
  - b. In the UTM Policy list, select **utmp3**.
3. Click **OK** to check your configuration and save it as a candidate configuration.
4. If you are done configuring the device, select **Actions>Commit**.

### Step-by-Step Procedure

To configure a security policy for Sophos antivirus:

1. Configure the untrust to trust policy to match any source-address.

```
[edit security]
user@host# set policies from-zone untrust to-zone trust policy p3 match
source-address any
```
2. Configure the untrust to trust policy to match any destination-address.

```
[edit security]
user@host# set policies from-zone untrust to-zone trust policy p3 match
destination-address any
```
3. Configure the untrust to trust policy to match any application type.

```
[edit security]
user@host# set policies from-zone untrust to-zone trust policy p3 match application
any
```
4. Attach the UTM policy named **utmp3** to the firewall security policy. This will cause matched traffic to be scanned by the Sophos antivirus feature.

```
[edit security]
user@host# set policies from-zone untrust to-zone trust policy p3 then permit
application-services utm-policy utmp3
```

### Verification

To verify the configuration, enter the **show security policies** command.

## Security Configuration Statement Hierarchy

**Supported Platforms**   [LN Series, SRX Series](#)

Use the statements in the **security** configuration hierarchy to configure actions, certificates, dynamic virtual private networks (VPNs), firewall authentication, flow, forwarding options, group VPNs, Intrusion Detection Prevention (IDP), Internet Key Exchange (IKE), Internet Protocol Security (IPsec), logging, Network Address Translation (NAT), public key infrastructure (PKI), policies, resource manager, rules, screens, secure shell known hosts, trace options, user identification, Unified Threat Management (UTM), and zones. Statements that are exclusive to the SRX Series devices running Junos OS are described in this section.

Each of the following topics lists the statements at a sub-hierarchy of the **[edit security]** hierarchy.

- [\[edit security address-book\] Hierarchy Level](#)
- [\[edit security alarms\] Hierarchy Level](#)
- [\[edit security alg\] Hierarchy Level](#)

<b>Hierarchy Level</b>	[edit security utm feature-profile]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Configure UTM antivirus full and express features.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## application (Security Policies)

**Supported Platforms** [LN Series](#)

**Syntax**

```
application {
    [application];
    any;
}
```

**Hierarchy Level** [edit security policies from-zone *zone-name* to-zone *zone-name* policy *policy-name* match]  
[edit security policies global policy *policy-name* match]

**Release Information** Statement introduced in Junos OS Release 8.5.

**Description** Specify the IP or remote procedure call (RPC) application or set of applications to be used as match criteria.

**Options** *application-name-or-set*—Name of the predefined or custom application or application set used as match criteria.

*any*—Any predefined or custom applications or application sets.

**NOTE:** A custom application that does not use a well-known destination port for the application will not be included in the *any* option, and must be named explicitly.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## content-size (Security Antivirus Sophos Engine)

---

**Supported Platforms** [SRX Series](#)

**Syntax** content-size (block | log-and-permit | permit);

**Hierarchy Level** [edit security utm feature-profile anti-virus sophos-engine profile *profile-name* fallback-options]

**Release Information** Statement introduced in Release 11.1 of Junos OS.

**Description** If the content size exceeds a set limit, the content is either passed or blocked.

**NOTE:** When you configure the content-size value, keep in mind that in certain cases, content size is available in the protocol headers, so the max-content-size fallback is applied before a scan request is sent. However, in many cases, content size is not provided in the protocol headers. In these cases, the TCP payload is sent to the antivirus scanner and accumulates until the end of the payload. If the accumulated payload exceeds the maximum content size value, then max-content-size fallback is applied. You might want to set the fallback action to block, in which case such a packet is dropped and a block message is sent to the client.

---

- Options**
- **block**—Log the error and deny the traffic
  - **log-and-permit**—Log the error and permit the traffic
  - **permit**—Permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## content-size-limit

---

### Supported Platforms

<b>Syntax</b>	content-size-limit <i>value</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> scan-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> scan-options] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	<p>The content size check occurs before the scan request is sent. The content size refers to accumulated TCP payload size.</p> <p>Range: 20 through 20,000</p>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## custom-message (Security Email Notify)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	custom-message <i>message</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update email-notify] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update email-notify] [edit security utm feature-profile anti-virus sophos-engine pattern-update email-notify]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.
<b>Description</b>	You can configure the device to notify a specified administrator when patterns are updated. This is an e-mail notification with a custom message.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## custom-message (Security Fallback Block)

---

<b>Supported Platforms</b>	
<b>Syntax</b>	custom-message <i>message</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-block]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## custom-message (Security Fallback Non-Block)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	custom-message <i>message</i> ;
<b>Hierarchy Level</b>	<p>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-non-block]</p> <p>[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-non-block]</p> <p>[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-non-block]</p>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Custom message notifications are mainly used in file replacement or in a response message when the antivirus scan result is to drop the file.
<b>Required Privilege Level</b>	<p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>

## custom-url-category

---

### Supported Platforms

**Syntax**    `custom-url-category object-name {  
                  value [value];  
                  }`

**Hierarchy Level**    [edit security utm custom-objects]

**Release Information**    Statement introduced in Junos OS Release 9.5.

**Description**    Use URL pattern lists to create Custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

- Options**
- ***object-name***—Name of the URL category-list object.
  - ***value value***—Value of the URL category-list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**    security—To view this statement in the configuration.  
                                         security-control—To add this statement to the configuration.

- Related Documentation**

## default (Security Antivirus Sophos Engine)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	default (block   log-and-permit   permit);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> fallback-options]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	All errors other than those specifically listed fall into this category. This could include either unhandled system exceptions (internal errors) or other unknown errors.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>block</b>—Log the error and deny the traffic</li> <li>• <b>log-and-permit</b>—Log the error and permit the traffic</li> <li>• <b>permit</b>—Permit the traffic</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## display-host (Security Fallback Block)

<b>Supported Platforms</b>	
<b>Syntax</b>	display-host;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-block]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Display the computer host name in the notification e-mail sent to the administrator when a fallback-block notification occurs.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## display-host (Security Virus Detection)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	display-host;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus profile <i>profile name</i> notification-options virus-detection]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	Display the computer host name in the notification e-mail sent to the administrator when a virus is detected by Sophos antivirus.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>

## email-notify

---

<b>Supported Platforms</b>	
<b>Syntax</b>	email-notify { admin-email <i>email-address</i> ; custom-message <i>message</i> ; custom-message-subject <i>message-subject</i> ; }
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update] [edit security utm feature-profile anti-virus juniper-express-engine pattern-update] [edit security utm feature-profile anti-virus sophos-engine pattern-update]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	You can configure the device to notify a specified administrator when patterns are updated. This is an e-mail notification with a custom message and a custom subject line.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## engine-not-ready (Security Antivirus Sophos Engine)

---

<b>Supported Platforms</b>	SRX Series
<b>Syntax</b>	default (block   log-and-permit   permit);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> fallback-options]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	The scan engine is initializing itself, for example, loading the signature database. During this phase, it is not ready to scan a file. A file could either pass or be blocked according to this setting.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>block</b>—Log the error and deny the traffic</li> <li>• <b>log-and-permit</b>—Log the error and permit the traffic</li> <li>• <b>permit</b>—Permit the traffic</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## fallback-block (Security Antivirus)

---

### Supported Platforms

<b>Syntax</b>	<pre>fallback-block {   administrator-email <i>email-address</i>;   allow-email;   custom-message <i>message</i>;   custom-message-subject <i>message-subject</i>;   display-host;   (notify-mail-sender   no-notify-mail-sender);   type (message   protocol-only); }</pre>
<b>Hierarchy Level</b>	<p>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options]</p> <p>[edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options]</p> <p>[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options]</p>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Configure notifications for fallback blocking actions. Fallback options tell the system how to handle the errors returned by either the scan engine or the scan manager.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## fallback-non-block (Security Antivirus)

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>fallback-non-block {   custom-message <i>message</i>;   custom-message-subject <i>message-subject</i>;   (notify-mail-recipient   no-notify-mail-recipient); }</pre>
<b>Hierarchy Level</b>	<pre>[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options]</pre>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Configure notifications for fallback nonblocking actions.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	<p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>

Hierarchy Level [edit security policies]

<b>Release Information</b>	Statement introduced in Junos OS Release 8.5. Support for the <b>services-offload</b> option added in Junos OS Release 11.4. Support for the <b>source-identity</b> option added in Junos OS Release 12.1. Support for the <b>description</b> option added in Junos OS Release 12.1. Support for the <b>ssl-termination-profile</b> and <b>web-redirect-to-https</b> options added in Junos OS Release 12.1X44-D10. Support for the <b>user-firewall</b> option added in Junos OS Release 12.1X45-D10.
<b>Description</b>	Specify a source zone and destination zone to be associated with the security policy.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>from-zone zone-name</b>—Name of the source zone.</li><li>• <b>to-zone zone-name</b>—Name of the destination zone.</li></ul> <p>The remaining statements are explained separately. See <a href="#">CLI Explorer</a>.</p>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Security Policies Feature Guide for Security Devices</i></li><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>Infranet Authentication Feature Guide for Security Devices</i></li></ul>

## interval (Security Antivirus)

### Supported Platforms

**Syntax** interval *value*;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine pattern-update]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update]  
[edit security utm feature-profile anti-virus sophos-engine pattern-update]

**Release Information** Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** Set the pattern data files auto-update interval. You can choose to leave the default interval value or you can change it by using this command. You can also force a manual update, if necessary.

**NOTE:** The data files used with Sophos are not typical virus pattern files; they are small files that help guide virus scanning logic. The full virus pattern database is stored on an external Sophos server called the Sophos Extensible List (SXL) server.

**Options** *value*—Pattern data files auto-update interval in minutes.

**Range:** 10 through 10,080 minutes (10 minutes through 7 days)

**Default:** For Juniper Express engine and Kaspersky Lab engine, 60 minutes; for Sophos engine, 1440 minutes (every 24 hours)

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## mime-pattern

### Supported Platforms

<b>Syntax</b>	mime-pattern <i>object-name</i> { <i>value</i> [ <i>value</i> ]; }
<b>Hierarchy Level</b>	[edit security utm custom-objects]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	The gateway device uses MIME (Multipurpose Internet Mail Extension) types to decide which traffic is allowed to bypass various types of scanning.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b><i>object-name</i></b>—Name of the MIME object.</li> <li>• <b><i>value value</i></b>—Value of the MIME object. You can configure multiple values separated by spaces and enclosed in square brackets.</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Content Filtering Feature Guide for Security Devices</i></li> </ul>

## mime-whitelist

---

### Supported Platforms

**Syntax**

```
mime-whitelist {  
  exception listname;  
  list listname {  
    exception listname;  
  }  
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus]

**Release Information** Statement introduced in Junos OS Release 9.5. Statement updated for Sophos antivirus support in Junos OS Release 11.1.

**Description** Configure the antivirus scanner to use MIME bypass lists and exception lists. You can use your own custom object lists, or you can use the default list that ships with the device called junos-default-bypass-mime.

**WARNING:** When you configure the MIME whitelist feature, be aware that, because header information in HTTP traffic can be spoofed, you cannot always trust HTTP headers to be legitimate. When a Web browser is determining the appropriate action for a given file type, it detects the file type without checking the MIME header contents. However, the MIME whitelist feature does refer to the MIME encoding in the HTTP header. For these reasons, it is possible in certain cases for a malicious website to provide an invalid HTTP header. For example, a network administrator might inadvertently add a malicious website to a MIME whitelist, and, because the site is in the whitelist, it will not be blocked by Sophos even though Sophos has identified the site as malicious in its database. Internal hosts would then be able to reach this site and could become infected.

---

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## no-autoupdate

---

### Supported Platforms

**Syntax** no-autoupdate;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine pattern-update]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update]  
[edit security utm feature-profile anti-virus sophos-engine pattern-update]

**Release Information** Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** Turn off automatic data file (pattern file) update for the Kaspersky Lab, Juniper Express, or Sophos engines.

**NOTE:** The data files used with Sophos are not typical virus pattern files; they are small files that help guide virus scanning logic. The full virus pattern database is stored on an external Sophos server called the Sophos Extensible List (SXL) server.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## no-notify-mail-recipient

---

### Supported Platforms

**Syntax** no-notify-mail-recipient;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options fallback-non-block]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options fallback-non-block]  
[edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options fallback-non-block]

**Release Information** Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.

**Description** Do not notify the e-mail recipient about errors returned by the antivirus scan engine when a fallback nonblocking action occurs.

You can specify that the e-mail recipient is to be notified with the **notify-mail-recipient** statement.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

<b>Syntax</b>	no-notify-mail-sender;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options virus-detection] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options virus-detection] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options virus-detection]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	<p>Do not notify the e-mail sender when a virus is detected by the antivirus engine.</p> <p>You can specify that the e-mail sender is to be notified with the <b>notify-mail-sender</b> statement.</p>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## no-uri-check

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	no-uri-check;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	<p>Do not perform Sophos antivirus Uniform Resource Identifier (URI) checking. URI checking is performed by analyzing HTTP traffic URI content against a remote Sophos database server to identify malware or malicious content. URI checking is on by default.</p> <p>You can enable Sophos antivirus URI checking with the <b>uri-check</b> statement.</p>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>

## notification-options (Security Antivirus)

### Supported Platforms

<b>Syntax</b>	<pre> notification-options {   fallback-block {     administrator-email <i>email-address</i>;     allow-email;     custom-message <i>message</i>;     custom-message-subject <i>message-subject</i>;     display-host;     (notify-mail-sender   no-notify-mail-sender);     type (message   protocol-only);   }   fallback-non-block {     custom-message <i>message</i>;     custom-message-subject <i>message-subject</i>;     (notify-mail-recipient   no-notify-mail-recipient);   }   virus-detection {     custom-message <i>message</i>;     custom-message-subject <i>message-subject</i>;     (notify-mail-sender   no-notify-mail-sender);     type (message   protocol-only);   } } </pre>
<b>Hierarchy Level</b>	<pre> [edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i>] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i>] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i>] </pre>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	There are multiple notification options you can configure to trigger when a virus is detected.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## notify-mail-recipient

---

### Supported Platforms

**Syntax** notify-mail-recipient;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options fallback-non-block]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options fallback-non-block]  
[edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options fallback-non-block]

**Release Information** Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.

**Description** Notify the e-mail recipient about errors returned by the antivirus scan engine when a fallback nonblocking action occurs.

You can specify that the e-mail recipient is not to be notified with the **no-notify-mail-recipient** statement.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## notify-mail-sender (Security Fallback Block)

### Supported Platforms

**Syntax** notify-mail-sender;

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options fallback-block]  
 [edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options fallback-block]  
 [edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options fallback-block]

**Release Information** Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** E-mail notification is used to notify the sender or the recipient about the errors returned by either the scan engine or the scan manager when a fallback action occurs.

You can specify that the sender is not to be notified with the **no-notify-mail-sender** statement.

**Required Privilege Level** security—To view this statement in the configuration.  
 security-control—To add this statement to the configuration.

**Related Documentation**

## notify-mail-sender (Security Virus Detection)

---

### Supported Platforms

**Syntax**    notify-mail-sender;

**Hierarchy Level**    [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* notification-options virus-detection]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* notification-options virus-detection]  
[edit security utm feature-profile anti-virus sophos-engine profile *profile-name* notification-options virus-detection]

**Release Information**    Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description**    E-mail notification is used to notify the sender or the recipient about the detected viruses or the scanning errors. When a virus is detected, an e-mail is sent to the sender upon virus detection.

You can specify that the sender is not to be notified with the **no-notify-mail-sender** statement.

**Required Privilege Level**    security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*
- *UTM Express Antivirus Protection Feature Guide for Security Devices*

## out-of-resources (Security Antivirus Sophos Engine)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	default (block   log-and-permit   permit);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> fallback-options]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	Virus scanning requires a great deal of memory and CPU resources. Due to resource constraints, memory allocation requests can be denied by the system. When out-of-resources occurs, scanning is aborted.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>block</b>—Log the error and deny the traffic</li> <li>• <b>log-and-permit</b>—Log the error and permit the traffic</li> <li>• <b>permit</b>—Permit the traffic</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## password (Security Antivirus)

<b>Supported Platforms</b>	<a href="#">SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650</a>
<b>Syntax</b>	password <i>password-string</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update proxy] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update proxy] [edit security utm feature-profile anti-virus sophos-engine pattern-update proxy]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Set the password for the proxy server.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## pattern-update (Security Antivirus)

---

### Supported Platforms

**Syntax**

```
pattern-update {  
  email-notify {  
    admin-email email-address;  
    custom-message message;  
    custom-message-subject message-subject;  
  }  
  interval value;  
  no-autoupdate;  
  proxy {  
    password password-string;  
    port port-number;  
    server address-or-url;  
    username name;  
  }  
  url url;  
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus juniper-express-engine]  
[edit security utm feature-profile anti-virus kaspersky-lab-engine]  
[edit security utm feature-profile anti-virus sophos-engine]

**Release Information** Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description** Updates to the pattern file are added as new viruses are discovered. You can configure the security device to regularly update the pattern file automatically, or you can update the file manually.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

---

## port (Security Antivirus)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	port <i>port-number</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update proxy] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update proxy] [edit security utm feature-profile anti-virus sophos-engine pattern-update proxy]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Set the port number for the proxy server.
<b>Options</b>	<b>Range:</b> 0 through 65,535
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## profile (Security Sophos Engine Antivirus)

**Supported Platforms** [SRX Series](#)

**Syntax**

```
profile <name> {
  fallback-options {
    content-size (block | log-and-permit | permit);
    default (block | log-and-permit | permit);
    engine-not-ready (block | log-and-permit | permit);
    out-of-resources (block | log-and-permit | permit);
    timeout (block | log-and-permit | permit);
    too-many-requests (block | log-and-permit | permit);
  }
  notification-options {
    fallback-block {
      administrator-email email-address;
      allow-email;
      custom-message message;
      custom-message-subject message-subject;
      display-host;
      (notify-mail-sender | no-notify-mail-sender);
      type (message | protocol-only);
    }
    fallback-non-block {
      custom-message message;
      custom-message-subject message-subject;
      (notify-mail-recipient | no-notify-mail-recipient);
    }
  }
  virus-detection {
    custom-message message;
    custom-message-subject message-subject;
    (notify-mail-sender | no-notify-mail-sender);
    type (message | protocol-only);
  }
}
scan-options {
  content-size-limit value;
  (no-uri-check | uri-check);
  timeout value;
}
trickling {
  timeout value;
}
```

**Hierarchy Level** [edit security utm feature-profile anti-virus sophos-engine]

**Release Information** Statement introduced in Release 11.1 of Junos OS.

**Description** Create a profile for the Sophos antivirus engine. This profile includes all subsequent configuration options.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## protocol-command

---

### Supported Platforms

**Syntax** protocol-command *object-name* {  
value [*value*];  
}

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Different protocols use different commands to communicate between servers and clients. By blocking or allowing certain commands, traffic can be controlled on the protocol command level.

**Options**

- ***object-name***—Name of the command-list object.
- ***value value***—Value of the command-list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## proxy (Security Antivirus)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre>proxy {   password <i>password-string</i>;   port <i>port-number</i>;   server <i>address-or-url</i>;   username <i>name</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update] [edit security utm feature-profile anti-virus sophos-engine pattern-update]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Update the pattern file on the proxy server.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## scan-options (Security Antivirus Sophos Engine)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	<pre>scan-options {   content-size-limit <i>value</i>;   (no-uri-check   uri-check);   timeout <i>value</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	Configure the antivirus feature to scan specific types of traffic based on various scanning configuration parameters.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## server (Security Antivirus)

<b>Supported Platforms</b>	<a href="#">SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650</a>
<b>Syntax</b>	server <i>address-or-url</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update proxy] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update proxy] [edit security utm feature-profile anti-virus sophos-engine pattern-update proxy]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Set the IP address or URL for the proxy server.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## sophos-engine

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

**Syntax**

```
sophos-engine {
  pattern-update {
    email-notify {
      admin-email email-address;
      custom-message message;
      custom-message-subject message-subject;
    }
    interval value;
    no-autoupdate;
    proxy {
      password password-string;
      port port-number;
      server address-or-url;
      username name;
    }
    url url;
  }
  profile <name> {
    fallback-options {
      content-size (block | log-and-permit | permit);
      default (block | log-and-permit | permit);
      engine-not-ready (block | log-and-permit | permit);
      out-of-resources (block | log-and-permit | permit);
      timeout (block | log-and-permit | permit);
      too-many-requests (block | log-and-permit | permit);
    }
    notification-options {
      fallback-block {
        administrator-email email-address;
        allow-email;
        custom-message message;
        custom-message-subject message-subject;
        display-host;
        (notify-mail-sender | no-notify-mail-sender);
        type (message | protocol-only);
      }
      fallback-non-block {
        custom-message message;
        custom-message-subject message-subject;
        (notify-mail-recipient | no-notify-mail-recipient);
      }
      virus-detection {
        custom-message message;
        custom-message-subject message-subject;
        (notify-mail-sender | no-notify-mail-sender);
        type (message | protocol-only);
      }
    }
    scan-options {
      content-size-limit value;
      (no-uri-check | uri-check);
    }
  }
}
```

```

        timeout value;
    }
    trickling {
        timeout value;
    }
}
sxl-retry value;
sxl-timeout seconds;
}

```

<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	Configure the UTM Sophos antivirus feature.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## sxl-retry

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	sxl-retry <i>value</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus sophos-engine]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	Configure the number of retry attempts to the remote Sophos Extensible List (SXL) server when a request timeout occurs.
<b>Options</b>	<p><b>value</b> —Number of retries.</p> <p><b>Range:</b> 0 through 5</p> <p><b>Default:</b> 1</p>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## sxl-timeout

---

Supported Platforms	<a href="#">SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650</a>
Syntax	sxl-timeout <i>seconds</i> ;
Hierarchy Level	[edit security utm feature-profile anti-virus sophos-engine]
Release Information	Statement introduced in Release 11.1 of Junos OS.
Description	Configure the timeout value for responses to a Sophos checksum or URI query.
Options	<b>seconds</b> —Number of seconds before timeout occurs. <b>Range:</b> 1 through 5 seconds <b>Default:</b> 2 seconds
Required Privilege Level	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>

## timeout (Security Antivirus Fallback Options Sophos Engine)

---

Supported Platforms	<a href="#">SRX Series</a>
Syntax	default (block   log-and-permit   permit);
Hierarchy Level	[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> fallback-options]
Release Information	Statement introduced in Release 11.1 of Junos OS.
Description	Scanning a complex file could consume resources and time. If the time it is taking to scan exceeds the timeout setting in the antivirus profile, the processing is aborted and the content is either passed or blocked without completing the virus checking. The decision is made based on the timeout fallback option.
Options	<ul style="list-style-type: none"><li>• <b>block</b>—Log the error and deny the traffic</li><li>• <b>log-and-permit</b>—Log the error and permit the traffic</li><li>• <b>permit</b>—Permit the traffic</li></ul>
Required Privilege Level	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>

## timeout (Security Antivirus Scan Options)

### Supported Platforms

**Syntax**    timeout *value*;

**Hierarchy Level**    [edit security utm feature-profile anti-virus juniper-express-engine profile *profile-name* scan-options]  
                              [edit security utm feature-profile anti-virus kaspersky-lab-engine profile *profile-name* scan-options]  
                              [edit security utm feature-profile anti-virus sophos-engine profile *profile-name* scan-options]

**Release Information**    Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.

**Description**    The scanning timeout value includes the time frame from when the scan request is generated to when the scan result is returned by the scan engine. The time range can be 1 to 1800 seconds. By default, it is 180 seconds.

**Required Privilege Level**    security—To view this statement in the configuration.  
                                          security-control—To add this statement to the configuration.

**Related Documentation**    • *Junos OS UTM Library for Security Devices*

```

**Hierarchy Level** [edit security policies from-zone *zone-name*]

**Release Information** Statement introduced in Junos OS Release 8.5. Support for the **services-offload** and **junos-host** options added in Junos OS Release 11.4. Support for the **source-identity** option added in Junos OS Release 12.1. Support for the **ssl-termination-profile** and **web-redirect-to-https** options added in Junos OS Release 12.1X44-D10.

**Description** Specify a destination zone to be associated with the security policy.

- Options**
- **zone-name**—Name of the destination zone object.
  - **junos-host**—Default security zone for self-traffic of the device.

The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## too-many-requests (Security Antivirus Fallback Options Sophos Engine)

---

**Supported Platforms** [SRX Series](#)

**Syntax** default (block | log-and-permit | permit);

**Hierarchy Level** [edit security utm feature-profile anti-virus sophos-engine profile *profile-name* fallback-options]

**Release Information** Statement introduced in Release 11.1 of Junos OS.

**Description** If the total number of messages received concurrently exceeds the device limits, the content is either passed or blocked depending on the too-many-request fallback option. (The allowed request limit is not configurable.)

- Options**
- **block**—Log the error and deny the traffic
  - **log-and-permit**—Log the error and permit the traffic
  - **permit**—Permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

- Related Documentation**
- *Junos OS UTM Library for Security Devices*

## trickling

### Supported Platforms

**Syntax**    `trickling {  
                  timeout value;  
                  }`

**Hierarchy Level**    `[edit security utm feature-profile anti-virus juniper-express-engine profile profile-name]  
                          [edit security utm feature-profile anti-virus kaspersky-lab-engine profile profile-name]  
                          [edit security utm feature-profile anti-virus sophos-engine profile profile-name]`

**Release Information**    Statement introduced in Junos OS Release 9.5. Statement updated for Sophos support in Junos OS Release 11.1.

**Description**    HTTP trickling is a mechanism used to prevent the HTTP client or server from timing-out during a file transfer or during antivirus scanning. HTTP Trickling is time-based and there is only one parameter to configure for this feature, which is the timeout Interval. By default, trickling is disabled.

**WARNING:** When you enable the trickling option, keep in mind that trickling might send part of a file to the client during its antivirus scan. It is therefore possible that some of the content could be received by the client before the file has been fully scanned.

**Options**    *value*—Timeout interval in seconds.  
              **Range:** 0 through 600 seconds

**Required Privilege Level**    security—To view this statement in the configuration.  
                                      security-control—To add this statement to the configuration.

**Related Documentation**    • *UTM Express Antivirus Protection Feature Guide for Security Devices*

## type (Security Antivirus Feature Profile)

---

### Supported Platforms

<b>Syntax</b>	type (juniper-express-engine   kaspersky-lab-engine   sophos-engine);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Statement updated for Sophos in Release 11.1 of Junos OS.
<b>Description</b>	Set the antivirus engine that will be used on the device. You can only have one engine type running and you must restart the device if you change engines.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## type (Security Fallback Block)

---

### Supported Platforms

<b>Syntax</b>	type (message   protocol-only);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options fallback-block] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options fallback-block]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	You can configure notifications for both fallback blocking and fallback nonblocking actions. With protocol-only notifications, a protocol-specific error code may be returned to the client.
<b>Options</b>	<ul style="list-style-type: none"><li>• message—Send a generic notification.</li><li>• protocol-only—Send a protocol-specific notification.</li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## type (Security Virus Detection)

### Supported Platforms

<b>Syntax</b>	type (message   protocol-only);
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options virus-detection] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options virus-detection] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options virus-detection]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5. Support for Sophos engine added in Junos OS Release 11.1.
<b>Description</b>	When content is blocked because a virus is found or a scan error occurs, the client generally still receives a successful response code but with modified content (file replacement) containing a warning message. But with protocol-only notifications, a protocol-specific error code might be returned to the client.
<b>Options</b>	<ul style="list-style-type: none"> <li>message—Send a generic notification.</li> <li>protocol-only—Send a protocol-specific notification.</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## url (Security Antivirus)

### Supported Platforms

<b>Syntax</b>	url <i>url</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update] [edit security utm feature-profile anti-virus sophos-engine pattern-update]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS for Juniper Express engine and Kaspersky Lab engine. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Specify the URL for the pattern database. You should not change the default URL unless you are experiencing problems with it and have called for support.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## uri-check

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	uri-check;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> scan-options]
<b>Release Information</b>	Statement introduced in Release 11.1 of Junos OS.
<b>Description</b>	<p>Perform Sophos antivirus Uniform Resource Identifier (URI) checking. URI checking is a way of analyzing URI content in HTTP traffic against a remote Sophos database to identify malware or malicious content. URI checking is on by default.</p> <p>You can disable Sophos antivirus URI checking with the <b>no-uri-check</b> statement.</p>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.

## url-pattern

### Supported Platforms

**Syntax** `url-pattern object-name {  
value [value];  
}`

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Use URL pattern lists to create custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

- Options**
- ***object-name***—Name of the URL list object.
  - ***value value***—Value of the URL list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

- Related Documentation**
- *Security Policies Feature Guide for Security Devices*
  - *Junos OS UTM Library for Security Devices*

## username (Security Antivirus)

---

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	username <i>name</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile anti-virus juniper-express-engine pattern-update proxy] [edit security utm feature-profile anti-virus kaspersky-lab-engine pattern-update proxy] [edit security utm feature-profile anti-virus sophos-engine pattern-update proxy]
<b>Release Information</b>	Statement introduced in Release 11.2 of Junos OS.
<b>Description</b>	Set the username for the proxy server.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li><li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li></ul>

## virus-detection (Security Antivirus)

### Supported Platforms

<b>Syntax</b>	<pre> virus-detection {   custom-message <i>message</i>;   custom-message-subject <i>message-subject</i>;   (notify-mail-sender   no-notify-mail-sender);   type (message   protocol-only); }</pre>
<b>Hierarchy Level</b>	<pre> [edit security utm feature-profile anti-virus juniper-express-engine profile <i>profile-name</i> notification-options] [edit security utm feature-profile anti-virus kaspersky-lab-engine profile <i>profile-name</i> notification-options] [edit security utm feature-profile anti-virus sophos-engine profile <i>profile-name</i> notification-options]</pre>
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Support for Sophos engine added in Release 11.1 of Junos OS.
<b>Description</b>	Configure a notification to send when a virus is detected.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	<p>security—To view this statement in the configuration.</p> <p>security-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> <li>• <i>UTM Full Antivirus Protection Feature Guide for Security Devices</i></li> <li>• <i>UTM Express Antivirus Protection Feature Guide for Security Devices</i></li> </ul>

## CHAPTER 18

# Administration

- [Managing Sophos Antivirus Protection on page 601](#)
- [Operational Commands on page 602](#)

## Managing Sophos Antivirus Protection

---

- [Managing Sophos Antivirus Data Files on page 601](#)

## Managing Sophos Antivirus Data Files

### Supported Platforms [SRX Series](#)

Before you begin:

- Install a Sophos antivirus license. See the *Installation and Upgrade Guide for Security Devices*.
- Configure Sophos as the antivirus feature for the device. See “[Example: Configuring Sophos Antivirus Feature Profile](#)” on [page 513](#). To set the antivirus engine type, you run the `set security utm feature-profile anti-virus type sophos-engine` statement.

In this example, you configure the security device to update the data files automatically every 4320 minutes (every 3 days). The default data file update interval is 1440 minutes (every 24 hours).

To automatically update Sophos data files:

```
[edit security utm feature-profile anti-virus]
user@host# set sophos-engine pattern-update interval 4320
```

**NOTE:** The following commands are performed from CLI operational mode.

To manually update data files:

```
user@host> request security utm anti-virus sophos-engine pattern-update
```

To manually reload data files:

```
user@host> request security utm anti-virus sophos-engine pattern-reload
```

To manually delete data files:

```
user@host> request security utm anti-virus sophos-engine pattern-delete
```

To check the status of antivirus, which also shows the data files version:

```
user@host> show security utm anti-virus status
```

To check the status of the proxy server:

```
user@host> show security utm anti-virus status
```

- [show security utm anti-virus statistics](#)
- [show security utm anti-virus status](#)

## clear security utm antivirus statistics

---

### Supported Platforms

**Syntax** clear security utm anti-virus statistics

**Release Information** Command introduced in Junos OS Release 9.5. Support for Sophos Antivirus added in Junos OS Release 11.1.  
Support for UTM in chassis cluster added in Junos OS Release 11.4.

**Description** Clear antivirus statistics information. With chassis cluster support for UTM, statistics from both the nodes are cleared.

**Required Privilege Level** clear

**Related Documentation**

- [show security utm anti-virus statistics on page 316](#)
- [show security utm anti-virus status on page 318](#)

**Output Fields** This command produces no output.

### Sample Output

clear security utm antivirus statistics

```
user@host> clear security utm anti-virus statistics
```

## request security utm anti-virus sophos-engine

---

**Supported Platforms** [SRX Series](#)

**Syntax** request security utm anti-virus sophos-engine

**Release Information** Command introduced in Release 11.1 of Junos OS.  
Support for UTM in chassis cluster added in Release 11.4 of Junos OS.

**Description** Manually update the Sophos antivirus pattern database using the command described. You can update the express antivirus pattern database automatically or manually. To update automatically you use the configuration statement **set security utm feature-profile anti-virus sophos-engine pattern-update interval seconds**. With full chassis cluster support for UTM this command is operational on both the nodes.

**Options**

- **pattern-delete** — Delete the current Sophos antivirus pattern database.
- **pattern-reload** — Reload the Sophos antivirus pattern database.
- **pattern-update** — Update the Sophos antivirus pattern database with the latest signatures.

**Required Privilege Level** maintenance

**Related Documentation**

- [Configuration on page 629](#)
- [Administration on page 731](#)

## CHAPTER 19

# Overview

- [Web Filtering on page 611](#)
- [Web Filtering Types on page 615](#)

## Web Filtering

---

- [Web Filtering Overview on page 611](#)
- [Enhanced Web Filtering Overview on page 612](#)
- [Understanding the Quarantine Action for Enhanced Web Filtering on page 613](#)

## Web Filtering Overview

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

Web filtering lets you manage Internet usage by preventing access to inappropriate Web content. There are four types of Web filtering solutions:

- **Integrated Web filtering**—The integrated Web filtering solution intercepts every HTTP request in a TCP connection. In this case, the decision making is done on the device after it identifies the category for a URL either from user-defined categories or from a category server (SurfControl Content Portal Authority provided by Websense).

**NOTE:** The integrated Web filtering feature is a separately licensed subscription service. When the license key for Web filtering has expired, no URLs are sent to the category server for checking, only local user-defined categories are checked.

- **Redirect Web filtering**—The redirect Web filtering solution intercepts HTTP requests and sends them to an external URL filtering server, provided by Websense, to determine whether to block the requests.

**NOTE:** Redirect Web filtering does not require a license.

- **Local Web filtering**—The local Web filtering solution intercepts every HTTP request in a TCP connection. In this case, the decision making is done on the device after it looks

up a URL to determine if it is in the whitelist or blacklist based on its user-defined category.

**NOTE:** Local Web filtering does not require a license or a remote category server.

- **Enhanced Web filtering**—The enhanced web filtering solution intercepts the HTTP and the HTTPS requests and sends the HTTP URL or the HTTPS source IP to the Websense ThreatSeeker Cloud (TSC). The TSC categorizes the URL into one of the 95 or more categories that are predefined and also provides site reputation information. The TSC further returns the URL category and the site reputation information to the device. The device determines if it can permit or block the request based on the information provided by the TSC.

You can bind either Web filtering profiles or antivirus profiles, or both, to a firewall policy. When both are bound to a firewall policy, Web filtering is applied first, then antivirus is applied. If a URL is blocked by Web filtering, the TCP connection is closed and no antivirus scanning is necessary. If a URL is permitted, the content of the transaction is then passed to the antivirus scanning process.

UTM Web Filtering supports HTTPS protocol. UTM Web filtering solution uses the IP address of the HTTPS packet to make blacklist, whitelist, permit, or block decisions.

During a block decision, the UTM Web filtering solution does not generate a block page because the clear text is not available for a HTTPS session. However, the solution terminates the session and sends resets to the client and the server for the blocked HTTPS sessions.

UTM Web filtering configuration for HTTP is also applicable for the HTTPS sessions .

**NOTE:** The `sessions-per-client limit` CLI command, which imposes a session throttle to prevent a malicious user from generating large amounts of traffic simultaneously, does not support Web filtering.

## Enhanced Web Filtering Overview

**Supported Platforms**   [SRX Series](#)

Enhanced Web Filtering (EWF) with Websense is an integrated URL filtering solution. When you enable the solution on the device, it intercepts the HTTP and the HTTPS requests and sends the HTTP URL or the HTTPS source IP to the Websense ThreatSeeker Cloud (TSC). The TSC categorizes the URL into one of the 95 or more categories that are predefined and also provides site reputation information. The TSC further returns the URL category and the site reputation information to the device. The device determines if it can permit or block the request based on the information provided by the TSC.

You can consider the EWF solution as the next-generation URL filtering solution, building upon the existing SurfControl solution.

Enhanced Web Filtering supports the following HTTP methods:

- GET
- POST
- OPTIONS
- HEAD
- PUT
- DELETE
- TRACE
- CONNECT

## Understanding the Quarantine Action for Enhanced Web Filtering

**Supported Platforms**   [SRX Series](#)

UTM Enhanced Web Filtering supports block, log-and-permit, and permit actions for HTTP/HTTPS requests. In addition to this, UTM Enhanced Web Filtering now supports the quarantine action which allows or denies access to the blocked site based on the user's response to the message.

The following sequence explains how the HTTP or HTTPS request is intercepted, redirected, and acted upon by the quarantine action:

- The HTTP client requests URL access.
- The device intercepts the HTTP request and sends the extracted URL to the Websense Thread Seeker Cloud (TSC).
- The TSC returns the URL category and the site reputation information to the device.
- If the action configured for the category is quarantine, the device logs the quarantine action and sends a redirect response to HTTP client.
- The URL is sent to the HTTP server for redirecting.
- The device shows a warning message stating that the access to the URL is blocked according to the organization's security policies and prompts the user to respond.
- If the user response is "No," the session is terminated. If the user response is "Yes," the user is allowed access to the site and such access is logged and reported to the administrator.

**NOTE:** On all branch SRX Series devices, the quarantine action is supported only for UTM Enhanced Web Filtering or Juniper enhanced type of Web filtering.

---

### Quarantine Message

The quarantine message sent to the HTTP client is user-configurable and is of the following types:

- Default message

The default quarantine message is displayed when a user attempts to access a quarantined website and it contains the following information:

- URL name
- Quarantine reason
- Category (if available)
- Site-reputation (if available)

For example, if you have set the action for Enhanced\_Search\_Engines\_and\_Portals to quarantine, and you try to access [www.search.example.com](http://www.search.example.com), the quarantine message is as follows:

**\*\*\*The requested webpage is blocked by your organization's access policy\*\*\***

- Syslog message.

The syslog message will be logged by the system when the user access the web page that has already been quarantined and marked as block or permit.

The corresponding syslog message on the device under test is:

```
Jan 25 15:10:40 rodian utmd[3871]: WEBFILTER_URL_BLOCKED: WebFilter:
ACTION="URL Blocked" 99.99.99.4(60525)->74.125.224.114(80)
CATEGORY="Enhanced_Search_Engines_and_Portals" REASON="by predefined
category(quarantine)" PROFILE="ewf-test-profile" URL=www.search.example.com
OBJ=/'
```

## Understanding Enhanced Web Filtering

### Supported Platforms [SRX Series](#)

Web filtering enables you to manage Internet access and prevent access to inappropriate Web content. This topic describes how the Enhanced Web Filtering feature intercepts, scans, and acts upon HTTP or HTTPS traffic.

1. The device creates TCP socket connections to the Threat Seeker Cloud(TSC).
2. The device intercepts an HTTP or an HTTPS connection and extracts each URL( in the HTTP request) or IP (in the HTTPS request).
3. The device looks for the URL in the user-configured blacklist or whitelist.
  - If the URL is in the user-configured blacklist, the device blocks the URL.
  - If the URL is in the user-configured whitelist, the device permits the URL.

4. The device checks the user-defined categories and blocks or permits the URL based on the user-specified action for the category.
5. The device looks for the URL in the URL filtering cache.
  - If the URL is not available in the URL filtering cache, the device sends the URL in HTTP format to the TSC with a request for categorization. The device uses one of the connections made available to the TSC to send the request.
  - The TSC responds to the device with the categorization and a reputation score.
6. The device performs the following actions based on the identified category:
  - If the URL is permitted, the device forwards the HTTP request to the HTTP server.
  - If the URL is blocked, the device sends a deny page to the HTTP client and also sends a reset message to the HTTP server to close the connection
  - If the URL is quarantined, the device sends a redirect response to the HTTP client and the URL is redirected to the HTTP server.
  - If the category is not available, the device permits or blocks the URL based on the configured action for the reputation score.
  - If an action for the site reputation score is not configured, the device permits or blocks the URL based on the default action configured in the Web filtering profile.

## Functional Requirements for Enhanced Web Filtering

- **License key**—The Enhanced Web Filtering solution builds upon the SurfControl integrated feature on the device. A valid license key for the Surf Control integrated solution is also valid for Enhanced Web Filtering. You do not need to install a new license to upgrade to the Enhanced Web Filtering solution.

**NOTE:** You can ignore the warning message "requires 'wf\_key\_websense\_ewf' license" because it is generated by routine EWF license validation check.

A grace period of 30 days, consistent with other UTM features, is provided for the Enhanced Web Filtering feature after the license key expires.

**NOTE:** The device will continue to support the SurfControl integrated solution after the upgrade.

When the grace period for the Enhanced Web Filtering feature has passed (or if the feature has not been installed), Web Filtering is disabled, all HTTP requests bypass Web filtering, and any connections to the TSC are disabled. When you install a valid license, the connections to the server are established again.

- A **debug** command provides the following information to each TCP connection available on the device:
  - Number of processed requests
  - Number of pending requests
  - Number of errors (dropped or timed-out requests)
- **TCP connection between a Web client and a Web server**—An App-ID module is used to identify an HTTP connection. The Enhanced Web Filtering solution identifies an HTTP connection after the device receives the first SYN packet. If an HTTP request has to be blocked, Enhanced Web Filtering sends a block message from the device to the Web client. Enhanced Web Filtering further sends a TCP FIN request to the client and a TCP reset (RST) to the server to disable the connection. The device sends all the messages through the flow session. The messages follow the entire service chain.
- **HTTP request interception**—Enhanced Web Filtering intercepts the first HTTP request on the device and performs URL filtering on all methods defined in HTTP 1.0 and HTTP 1.1. The device holds the original request while waiting for a response from the TSC. If the first packet in the HTTP URL is fragmented or if the device cannot extract the URL for some reason, then the destination IP address is used for the categorization.

**NOTE:** For HTTP 1.1 persistent connections, the subsequent requests on that session are ignored by the Enhanced Web Filtering module.

If the device holds the original request for a long time, then the client will retransmit the request. The URL filtering code will detect the retransmitted packets. If the original HTTP request has already been forwarded, then Enhanced Web Filtering forwards the retransmitted packet to the server. However, if Enhanced Web Filtering is in the middle of first-packet processing or makes the calculation to block the session, then the solution drops the retransmitted packet. A counter tracks the number of retransmitted packets received by the device.

If the TSC does not respond in time to the categorization request from the device, then the original client request is blocked or permitted as per the timeout fallback setting.

Enhanced Web Filtering supports HTTPS requests; however, the destination IP is used for Web filtering instead of actual plain text URLs. You cannot decrypt HTTPS requests to obtain the URL; however, you can extract the source IP from the IP header. This IP is passed to the TSC and a category corresponding to the TSC is returned if possible.

- **Blocking message**—The blocking message sent to the webClient is user-configurable and is of the following types:
  - The Juniper Networks blocking message is the default message defined in the device that can be modified by the user. The default blocking message contains the reason why the request is blocked and the category name (if it is blocked because of a category).
  - Syslog message.

For example, if you have set the action for Enhanced\_Search\_Engines\_and\_Portals to block, and you try to access [www.google.com](http://www.google.com), the blocking message is of the following form: **Juniper Web Filtering:Juniper Web Filtering has been set to block this site.**

**CATEGORY: Enhanced\_Search\_Engines\_and\_Portals REASON: BY\_PRE\_DEFINED .**

However, the corresponding syslog message on the DUT is:

**WEBFILTER\_URL\_BLOCKED: WebFilter: ACTION="URL Blocked"**

**56.56.56.2(59418)->74.125.224.48(80)**

**CATEGORY="Enhanced\_Search\_Engines\_and\_Portals" REASON="by predefined category" PROFILE="web-ewf" URL=www.google.com OBJ=/ .**

- **Monitoring the Websense server**—The URL filtering module uses two methods to determine if the TSC is active: socket connections and heartbeat. Enhanced Web Filtering maintains persistent TCP sockets to the TSC. The server responds with a TCP ACK if it is enabled. Enhanced Web Filtering sends an application layer NOOP keepalive to the TSC. If the device does not receive responses to three consecutive NOOP keepalives in a specific period, it determines the socket to be inactive. Enhanced Web Filtering module attempts to open a new connection to the TSC. If all sockets are inactive, the TSC is considered to be inactive. Therefore an error occurs. The error is displayed and logged. Subsequent requests and pending requests are either blocked or passed according to the server connectivity fallback setting until new connections to the TSC are opened again.
- **HTTP protocol communication with TSC**—Enhanced Web Filtering uses the HTTP 1.1 protocol to communicate with the TSC. This ensures a persistent connection and transmission of multiple HTTP requests through the same connection. A single HTTP request or response is used for client or server communication. The TSC can handle queued requests; for optimal performance, an asynchronous request or response

mechanism is used. The requests are sent over TCP, so TCP retransmission is used to ensure request or response delivery. TCP also ensures valid in-order, non-retransmitted HTTP stream data is sent to the HTTP client on the device.

- **Responses**—The responses adhere to the basic HTTP conventions. Successful responses include a 20x response code (typically 200). An error response include a 4xx or 5xx code. Error responses in the 4xx series indicate issues in the custom code. Error responses in the 5xx series indicate issues with the service.

Error codes and meanings are as follows:

- 400—Bad request
- 403—Forbidden
- 404—Not found
- 408—Request canceled or null response
- 500—Internal server error

Errors in the 400 series indicate issues with the request. Errors in the 500 series indicate issues with the TSC service. Websense is notified of these errors automatically and responds accordingly.

You can configure the default fallback-setting to determine whether to pass or block the request: **set security utm feature-profile web-filtering juniper-enhanced profile juniper-enhanced fallback-settings default ?**

The response also contains the site categorization and site reputation information.

- **Categories**—A category list is available on the device. This list consists of categories, each containing a category code, a name, and a parent ID. Categories can also be user-defined. Each category consists of a list of URLs or IP addresses. Categories are not updated dynamically and are tied to the Junos OS release because they have to be compiled into the Junos OS image. Any update in categories needs to be synchronized with the Junos OS release cycle.
- **Caching**—Successfully categorized responses are cached on the device. Uncategorized URLs are not cached. The size of the cache can be configured by the user.
- **Safe search (HTTP support only, not HTTPS)**—A safe-search solution is used to ensure that the embedded objects such as images on the URLs received from the search engines are safe and that no undesirable content is returned to the client.

A URL is provided to the TSC to provide categorization information. If it is a search URL, the TSC also returns a safe-search string. For instance, the safe-search string for Google is **safe=active**. This safe-search string is appended to the URL, and a redirect response for redirecting the client's query with safe search is turned on. This ensures that no unsafe content is returned to the client. If the TSC indicates that it needs to be safe-searched, then you can perform the safe-search redirect.

For example, the client makes a request to the URL

[http://images.google.com/images?hl=en&source=imghp&biw=1183&bih=626&q=adult+movies&gbv=2&aq=f&aqi=&aql=&oq=&gs\\_rfai=](http://images.google.com/images?hl=en&source=imghp&biw=1183&bih=626&q=adult+movies&gbv=2&aq=f&aqi=&aql=&oq=&gs_rfai=) No category action is defined for this URL. TSC returns safe-search string **safe=active**. The Enhanced Web Filtering

code on the DUT generates a HTTP 302 response, with the redirect URL:  
[http://images.google.com/images?hl=en&source=imghp&biw=1183&bih=626&q=adult+movies&gbv=2&aq=f&aqi=&aql=&oq=&gs\\_rfai=&safe=active](http://images.google.com/images?hl=en&source=imghp&biw=1183&bih=626&q=adult+movies&gbv=2&aq=f&aqi=&aql=&oq=&gs_rfai=&safe=active). This response is returned to the client. The client now sends out a safe redirect request to this URL.

**NOTE:** Safe-search redirect supports HTTP only. You cannot extract the URL for HTTPS. Therefore it is not possible to generate a redirect response for HTTPS search URLs. Safe-search redirects can be disabled by using the CLI option `no-safe-search`.

- **Site reputation**—The TSC provides site reputation information. Based on these reputations, you can choose a block or a permit action. If the URL is not handled by a whitelist or a blacklist and does not fall in a user or predefined category, then the reputation can be used to perform URL filtering decision.

The reputation scores are as follows:

- 100-90—Site is considered very safe.
- 80-89—Site is considered moderately safe.
- 70-79—Site is considered fairly safe.
- 60-69—Site is considered suspicious.
- 0-59—Site is considered harmful.

The device maintains a log for URLs that are blocked or permitted based on site reputation scores.

- **Profiles**—An URL filtering profile is defined as a list of categories, with each profile having an action type (permit, log-and-permit, block, quarantine, blacklist, or whitelist) associated with it. A predefined profile, *junos-wf-enhanced-default*, is provided to users if they choose not to define their own profile. A blacklist or a whitelist action type is a user-defined category in which all the URLs or IP addresses are always blocked or permitted and optionally logged. For each URL filtering profile, you can configure one action type (blacklist or whitelist).

You can also define an action based on site reputations in a profile to specify the action when the incoming URL does not belong to any of the categories defined in the profile. If you do not configure the site reputation handling information, then you can define a default action. All URLs that do not have a defined category or defined reputation action in their profile will be blocked, permitted, logged-and-permitted, or quarantined depending on the block or permit handling for the default action explicitly defined in the profile. If you do not specify a default action, then the URLs will be permitted. For search engine requests, if there is no explicit user-defined configuration, and the URL request is without the safe search option, then Enhanced Web Filtering generates a redirect response and sends it to the client. The client will generate a new search request with the safe-search option enabled.

**NOTE:**

A URL filtering profile can contain the following items:

- One blacklist
- One whitelist
- Multiple user-defined and predefined categories, each with a permit or block action
- Multiple site reputation handling categories, each with a permit or block action
- One default action with a permit or block action

The order of search is blacklist, whitelist, user-defined category, predefined category, safe-search, site reputation, and default action.

## Understanding Integrated Web Filtering

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

With integrated Web filtering, the firewall intercepts every HTTP request in a TCP connection and extracts the URL from the HTTP request. Each individual HTTP request is blocked or permitted based on URL filtering profiles defined by you. The decision making is done on the device after it identifies a category for a URL.

A URL category is a list of URLs grouped by content. URL categories are predefined and maintained by SurfControl or are defined by you. SurfControl maintains about 40 predefined categories. When defining your own URL categories, you can group URLs and create categories specific to your needs.

You define your own categories using URL pattern list and custom URL category list custom objects. Once defined, you can select your categories when you configure your Web filtering profile. Each category can have a maximum of 20 URLs. When you create a category, you can add either the URL or the IP address of a site. When you add a URL to a user-defined category, the device performs DNS lookup, resolves the host name into IP addresses, and caches this information. When a user tries to access a site with the IP address of the site, the device checks the cached list of IP addresses and tries to resolve

the hostname. Many sites have dynamic IP addresses, meaning that their IP addresses change periodically. A user attempting to access a site can type an IP address that is not in the cached list on the device. Therefore, if you know the IP addresses of sites you are adding to a category, enter both the URL and the IP address(es) of the site.

**NOTE:** If a URL appears in both a user-defined category and a predefined category, the device matches the URL to the user-defined category.

**NOTE:** Web filtering is performed on all the methods defined in HTTP 1.0 and HTTP 1.1.

This topic contains the following sections:

- [Integrated Web Filtering Process on page 622](#)
- [Integrated Web Filtering Cache on page 622](#)
- [Integrated Web Filtering Profiles on page 623](#)
- [Profile Matching Precedence on page 623](#)

---

### Integrated Web Filtering Process

This is a general description of how Web traffic is intercepted and acted upon by the Web filtering module.

1. The device intercepts a TCP connection.
2. The device intercepts each HTTP request in the TCP connection.
3. The device extracts each URL in the HTTP request and checks its URL filter cache.
4. Global Web filtering whitelists and blacklists are checked first for block or permit.
5. If the HTTP request URL is allowed based on cached parameters, it is forwarded to the webserver. If there is no cache match, a request for categorization is sent to the SurfControl server. (If the HTTP request URL is blocked, the request is not forwarded and a notification message is logged.)
6. In the allowed case, the SurfControl server responds with the corresponding category.
7. Based on the identified category, if the URL is permitted, the device forwards the HTTP request to the webserver. If the URL is not permitted, then a deny page is sent to the HTTP client.

---

### Integrated Web Filtering Cache

By default, the device retrieves and caches the URL categories from the SurfControl CPA server. This process reduces the overhead of accessing the SurfControl CPA server each time the device receives a new request for previously requested URLs. You can configure the size and duration of the cache, according to the performance and memory requirements of your networking environment. The lifetime of cached items is configurable between 1 and 1800 seconds with a default value of 300 seconds.

**NOTE:** Caches are not preserved across device reboots or power losses.

---

## Integrated Web Filtering Profiles

---

You configure Web filtering profiles that permit or block URLs according to defined categories. A Web filtering profile consists of a group of URL categories assigned one of the following actions:

- **Permit** — The device always allows access to the websites in this category.
- **Block** — The device blocks access to the websites in this category. When the device blocks access to this category of websites, it displays a message in your browser indicating the URL category.
- **Blacklist** — The device always blocks access to the websites in this list. You can create a user-defined category.
- **Whitelist** — The device always allows access to the websites in this list. You can create a user-defined category.

**NOTE:** A predefined profile is provided and can be used if you choose not to define your own profile.

A Web filtering profile may contain one blacklist or one whitelist, multiple user-defined and/or predefined categories each with a permit or block action, and an *Other* category with a permit or block action. You can define an action for all *Other* categories in a profile to specify what to do when the incoming URL does not belong to any of the categories defined in the profile. If the action for the *Other* category is block, the incoming URL is blocked if it does not match any of the categories explicitly defined in the profile. If an action for the *Other* category is not specified, the default action of permit is applied to the incoming URL not matching any category.

---

## Profile Matching Precedence

---

When a profile employs several categories for URL matching, those categories are checked for matches in the following order:

1. If present, the global blacklist is checked first. If a match is made, the URL is blocked. If no match is found...
2. The global whitelist is checked next. If a match is made, the URL is permitted. If no match is found...
3. User-defined categories are checked next. If a match is made, the URL is blocked or permitted as specified. If no match is found...
4. Predefined categories are checked next. If a match is made, the URL is blocked or permitted as specified. If no match is found...
5. The *Other* category is checked next. If a match is made, the URL is blocked or permitted as specified.

## Understanding Local Web Filtering

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

With local Web filtering, the firewall intercepts every HTTP request in a TCP connection and extracts the URL. The decision making is done on the device after it looks up a URL to determine if it is in the whitelist or blacklist based on its user-defined category. If the URL is in the url-blacklist, the request is blocked; if it's in the url-whitelist, the request is permitted. If the URL is not in either list, the defined default action will occur (block, log-and-permit, or permit). You can permit or block access to a requested site by binding a Web filtering profile to a firewall policy. Local Web filtering provides basic Web filtering without requiring an additional license or external category server.

This topic contains the following sections:

- [User-Defined URL Categories on page 624](#)
- [Local Web Filtering Process on page 625](#)
- [Local Web Filtering Profiles on page 625](#)
- [Profile Matching Precedence on page 625](#)

---

### User-Defined URL Categories

When defining your own URL categories, you can group URLs and create categories specific to your needs. Each category can have a maximum of 20 URLs. When you create a category, you can add either the URL or the IP address of a site. When you add a URL to a user-defined category, the device performs DNS lookup, resolves the hostname into IP addresses, and caches this information. When a user tries to access a site with the IP address of the site, the device checks the cached list of IP addresses and tries to resolve the hostname. Many sites have dynamic IP addresses, meaning that their IP addresses change periodically. A user attempting to access a site can type an IP address that is not in the cached list on the device. Therefore, if you know the IP addresses of sites you are adding to a category, enter both the URL and the IP address(es) of the site.

You define your own categories using URL pattern list and custom URL category list custom objects. Once defined, you assign your categories to the global user-defined url-blacklist (block) or url-whitelist (permit) categories.

**NOTE:** Web filtering is performed on all the methods defined in HTTP 1.0 and HTTP 1.1.

---

### Local Web Filtering Process

---

This is a general description of how Web traffic is intercepted and acted upon by the Web filtering module.

1. The device intercepts a TCP connection.
2. The device intercepts each HTTP request in the TCP connection.
3. The device extracts each URL in the HTTP request and checks its URL against the user-defined whitelist and blacklist.
4. If the URL is found in the blacklist, the request is not permitted and a deny page is sent to the http client. If the URL is found in the whitelist, the request is permitted.
5. If the URL is not found in the whitelist or blacklist, the configured default fallback action is applied. If no fallback action is defined, then the request is permitted.

---

### Local Web Filtering Profiles

---

You configure Web filtering profiles that permit or block URLs according to defined custom categories. A Web filtering profile consists of a group of URL categories assigned one of the following actions:

- Blacklist — The device always blocks access to the websites in this list. Only user-defined categories are used with local Web filtering.
- Whitelist — The device always allows access to the websites in this list. Only user-defined categories are used with local Web filtering.

A Web filtering profile can contain one blacklist or one whitelist with multiple user-defined categories each with a permit or block action. You can define a default fallback action when the incoming URL does not belong to any of the categories defined in the profile. If the action for the default category is block, the incoming URL is blocked if it does not match any of the categories explicitly defined in the profile. If an action for the default action is not specified, the default action of permit is applied to the incoming URL not matching any category.

---

### Profile Matching Precedence

---

When a profile employs several categories for URL matching, those categories are checked for matches in the following order:

1. If present, the global blacklist is checked first. If a match is made, the URL is blocked. If no match is found...
2. The global whitelist is checked next. If a match is made, the URL is permitted. If no match is found...

3. User-defined categories are checked next. If a match is made, the URL is blocked or permitted as specified.

## Understanding Redirect Web Filtering

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

With redirect Web filtering, the Web filtering module intercepts an HTTP request. The URL in the request is then sent to the external Websense server, which makes a permit or a deny decision. If access is permitted to the URL in question, the original HTTP request and all the subsequent requests are sent to the intended HTTP server. But if access is denied to the URL in question, a blocking message is sent to the client.

This is a general description of how Web traffic is intercepted, redirected, and acted upon by the Web filtering module:

1. A Web client establishes a TCP connection with the webserver.
2. The Web client then sends an HTTP request.
3. The device intercepts the requests and extract URL. The URL is checked against Global Web filtering whitelists and blacklists. If no match is made, the Websense server configuration parameters are utilized. Otherwise go to step 6.
4. The URL is sent to the Websense server for checking,
5. The Websense server returns a response indicating whether or not the URL is to be permitted or blocked.
6. If access is allowed, then the original HTTP request is sent to the webserver. If access is denied, the device sends a blocking message to the client and tears down the TCP connection.

**NOTE:** Web filtering is performed on all the methods defined in HTTP1.0 and HTTP 1.1. However, redirect Web filtering does not support HTTPS traffic because it cannot be decrypted to obtain the URL.

---

**NOTE:** Decision making from real-time options provides a higher level of accuracy, therefore caching for redirect Web filtering is not supported.

---

NOTE: Redirect Web filtering does not require a subscription license.

## Example: Configuring Enhanced Web Filtering

### Supported Platforms [SRX Series](#)

- [Requirements on page 629](#)
- [Overview on page 629](#)
- [Configuration on page 630](#)
- [Verification on page 636](#)

### Requirements

---

Before you begin, you should be familiar with Web Filtering and Enhanced Web Filtering. See [“Web Filtering Overview” on page 611](#) and [“Understanding Enhanced Web Filtering” on page 615](#).

### Overview

---

In this example, you configure custom objects and feature profiles.

In the first example configuration, you create a custom object called `urllist3` that contains the pattern `http://www.example.net 1.2.3.4`. The `urllist3` custom object is then added to the custom URL category `custurl3`.

In the second example configuration, you configure the Web filtering feature profile. You set the URL blacklist filtering category to `custblacklist`, set the whitelist filtering category to `custwhitelist`, and set the type of Web filtering engine to `juniper-enhanced`. Then you

set the cache size parameters for Web filtering to 500 KB and the cache timeout parameters to 1800.

You name the Enhanced Web Filtering server as `rp.cloud.example.com` and enter 80 as the port number for communicating with it. (Default port is 80.) Then you create a Enhanced Web Filtering profile name called `junos-wf-enhanced-default`.

Next you select a category from the included whitelist and blacklist categories or select a custom URL category list you created for filtering against. Then you enter an action (permit, log and permit, block, or quarantine) to go with the filter. You do this as many times as necessary to compile your whitelists and blacklists and their accompanying actions. This example blocks URLs in the `Enhanced_Hacking` category. You also specify the action to be taken depending on the site reputation returned for the URL if there is no category match found.

Then you enter a custom message to be sent when HTTP requests are blocked. This example configures the device to send an `***access denied***` message. You select a default action (permit, log and permit, block, or quarantine) for this profile for requests that does not match to any explicitly configured action. This example sets the default action to block. You select fallback settings (block or log and permit) for this profile, in case errors occur in each configured category. This example sets fallback settings to block.

You can also define a redirect URL server so that instead of the device sending a block page with plain text html, the device will send a HTTP 302 redirect to this redirect server with some special variables embedded in the HTTP redirect location field. These special variables can be parsed by the redirect server and serve a special block page to the client with rich images and formatting. The cli command hierarchy is as follows:

```
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default block-message type custom-redirect-url
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default block-message url http://10.10.121.18
```

**NOTE:** If you configure the `security utm feature-profile web-filtering juniper-enhanced profile junos-wf-enhanced-default block-message`, then the default block message configuration takes precedence over the `security utm feature-profile web-filtering juniper-enhanced profile junos-wf-enhanced-default custom-block-message` configuration.

Finally, you enter a timeout value in seconds. Once this limit is reached, fail mode settings are applied. The default is 15 seconds, and you can enter a value from 0 to 1800 seconds. This example sets the timeout value to 10. You also disable the safe search functionality. By default, search requests have safe-search strings attached to them, and redirect response is sent to ensure that all search requests are safe or strict.

---

## Configuration

- [Configuring Enhanced Web Filtering Custom Objects on page 631](#)
- [Configuring the Enhanced Web Filtering Feature Profiles on page 632](#)

*Configuring Enhanced Web Filtering Custom Objects*

**CLI Quick Configuration** To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm custom-objects url-pattern urllist3 value http://www.example.net
set security utm custom-objects url-pattern urllist3 value 1.2.3.4
set security utm custom-objects url-pattern urllistblack value http://www.untrusted.com
set security utm custom-objects url-pattern urllistblack value 13.13.13.13
set security utm custom-objects url-pattern urllistwhite value http://www.trusted.com
set security utm custom-objects url-pattern urllistwhite value 7.7.7.7
set security utm custom-objects custom-url-category custurl3 value urllist3
set security utm custom-objects custom-url-category custblacklist value urllistblack
set security utm custom-objects custom-url-category custwhitelist value urllistwhite
```

**WARNING:** A Custom category does not take precedence over a predefined category when it has the same name as one of the predefined categories. Do not use the same name for a custom category that you have used for a predefined category.

**Step-by-Step Procedure**

To configure integrated Web filtering:

1. Create custom objects and create the URL pattern list.  

```
[edit security utm]
user@host# set custom-objects url-pattern urllist3 value [http://www.example.net 1.2.3.4]
```
2. Configure the custom URL category list custom object using the URL pattern list.  

```
[edit security utm]
user@host# set custom-objects custom-url-category custurl3 value urllist3
```
3. Create a list of untrusted sites.  

```
[edit security utm]
user@host# set custom-objects url-pattern urllistblack value [http://www.untrusted.com 13.13.13.13]
```
4. Configure the custom URL category list custom object using the URL pattern list of untrusted sites.  

```
[edit security utm]
user@host# set custom-objects custom-url-category custblacklist value urllistblack
```
5. Create a list of trusted sites.  

```
[edit security utm]
user@host# set custom-objects url-pattern urllistwhite value [http://www.trusted.com 7.7.7.7]
```
6. Configure the custom URL category list custom object using the URL pattern list of trusted sites.

```
[edit security utm]
user@host# set custom-objects custom-url-category custwhitelist value urllistwhite
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm custom-objects** command. If the output does not display the intended configuration, repeat the instructions in this example to correct.

For brevity, this show command output includes only the configuration that is relevant to this example. Any other configuration on the system has been replaced with ellipses (...).

```
[edit]
userhost#show security utm custom-objects
url-pattern {
  urllist3 {
    value [ http://www.example.net ];
  }
  urllistblack {
    value [ http://www.untrusted.com 13.13.13.13 ];
  }
  urllistwhite {
    value [ http://www.trusted.com 7.7.7.7 ];
  }
}
custom-url-category {
  custurl3 {
    value urllist3;
  }
  custblacklist {
    value urllistblack;
  }
  custwhitelist {
    value urllistwhite;
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### *Configuring the Enhanced Web Filtering Feature Profiles*

**CLI Quick Configuration** To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile web-filtering url-whitelist custwhitelist
set security utm feature-profile web-filtering url-blacklist custblacklist
set security utm feature-profile web-filtering juniper-enhanced cache size 500
set security utm feature-profile web-filtering juniper-enhanced cache timeout 1800
set security utm feature-profile web-filtering juniper-enhanced server host
  rp.cloud.example.com
set security utm feature-profile web-filtering juniper-enhanced server port 80
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default category Enhanced_Hacking action log-and-permit
```

```

set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default site-reputation-action very-safe permit
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default site-reputation-action moderately-safe log-and-permit
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default site-reputation-action fairly-safe log-and-permit
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default site-reputation-action harmful block
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default site-reputation-action suspicious block
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default default block
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default custom-block-message "****access denied ****"
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default default block
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default fallback-settings server-connectivity block
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default fallback-settings timeout block
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default fallback-settings too-many-requests block
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default timeout 10
set security utm feature-profile web-filtering juniper-enhanced profile
  junos-wf-enhanced-default no-safe-search
set security utm utm-policy mypolicy web-filtering http-profile my_ewfprofile01
set security policies from-zone utm_clients to-zone mgmt policy 1 then permit
  application-services utm-policy mypolicy
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  quarantine-custom-message "***The requested webpage is blocked by your
  organization's access policy**".
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  quarantine-message type custom-redirect-url
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  quarantine-message url besgas.spglab.example.net

```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure the Enhanced Web Filtering feature profiles:

1. Configure the Web filtering URL blacklist.  

```
[edit security utm feature-profile web-filtering]
user@host# set url-blacklist custblacklist
```
2. Configure the Web filtering URL whitelist.  

```
[edit security utm feature-profile web-filtering]
user@host# set url-whitelist custwhitelist
```
3. Specify the Enhanced Web Filtering engine, and set the cache size parameters.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced cache size 500
```

4. Set the cache timeout parameters.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced cache timeout 1800
```
5. Set the server name or IP address.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced server host rp.cloud.example.com
```
6. Enter the port number for communicating with the server.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced server port 80
```
7. Create a profile name, and select a category from the included whitelist and blacklist categories.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile junos-wf-enhanced-default category
Enhanced_Hacking action log-and-permit
```
8. Specify the action to be taken depending on the site reputation returned for the URL if there is no category match found.  

```
[edit security utm feature-profile web-filtering]
user@host#set juniper-enhanced profile junos-wf-enhanced-default
site-reputation-action very-safe permit
user@host#set juniper-enhanced profile junos-wf-enhanced-default
site-reputation-action moderately-safe log-and-permit
user@host#set juniper-enhanced profile junos-wf-enhanced-default
site-reputation-action fairly-safe log-and-permit
user@host#set juniper-enhanced profile junos-wf-enhanced-default
site-reputation-action harmful block
user@host#set juniper-enhanced profile junos-wf-enhanced-default
site-reputation-action suspicious block
```
9. Enter a custom message to be sent when HTTP requests are blocked.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile junos-wf-enhanced-default
custom-block-message "***access denied ***"
```
10. Select a default action (permit, log and permit, block, or quarantine) for the profile, when no other explicitly configured action (blacklist, whitelist, custom category, predefined category actions or site reputation actions.) is matched .  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile junos-wf-enhanced-default default block
```
11. Select fallback settings (block or log and permit) for this profile.  

```
[edit security utm feature-profile web-filtering]
set juniper-enhanced profile junos-wf-enhanced-default fallback-settings default
block
user@host# set juniper-enhanced profile junos-wf-enhanced-default
fallback-settings server-connectivity block
user@host# set juniper-enhanced profile junos-wf-enhanced-default
fallback-settings timeout block
set juniper-enhanced profile junos-wf-enhanced-default fallback-settings
too-many-requests block
```

12. Enter a timeout value in seconds.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile junos-wf-enhanced-default timeout 10
```
13. Disable the safe-search option.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile junos-wf-enhanced-default no-safe-search
```
14. Configure a UTM policy for the web-filtering HTTP protocol and attach this policy to a security profile to implement it.  

```
[edit security utm]
user@host# set utm-policy mypolicy web-filtering http-profile my_ewfprofile01
```
15. Configure a security policy.  

```
[edit security]
user@host# set policies from-zone utm_clients to-zone mgmt policy 1 then permit
application-services utm-policy mypolicy
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm feature-profile** command. If the output does not display the intended configuration, repeat the instructions in this example to correct.

```
[edit]
user@host# show security utm
feature-profile{
web-filtering {
  url-whitelist custwhitelist;
  url-blacklist custblacklist;
  type juniper-enhanced;
  juniper-enhanced {
    cache {
      timeout 1800;
      size 500;
    }
    server {
      host rp.cloud.example.com;
      port 80;
    }
  }
  profile junos-wf-enhanced-default {
    category {
      Enhanced_Hacking {
        action log-and-permit;
      }
      Enhanced_Government {
        action quarantine;
      }
    }
  }
  site-reputation-action {
    very-safe permit;
    moderately-safe log-and-permit;
    fairly-safe log-and-permit;
    harmful block;
    suspicious block;
  }
}
```

```
    }
    default block;
    custom-block-message "***access denied ***";
    fallback-settings {
        default block;
        server-connectivity block;
        timeout block;
        too-many-requests block;
    }
    timeout 10;
    no-safe-search;
}
utm-policy mypolicy {
    web-filtering {
        http-profile my_ewfprofile01;
    }
}
}
```

---

### Verification

To confirm that the configuration is working properly, perform these tasks:

- [Verifying the Status of the Web Filtering Server on page 636](#)
- [Verifying the Increase in Web Filtering Statistics on page 636](#)

#### *Verifying the Status of the Web Filtering Server*

**Purpose** Verify the web filtering server status.

**Action** From the top of the configuration in configuration mode, enter the **show security utm web-filtering status** command.

#### *Verifying the Increase in Web Filtering Statistics*

**Purpose** Verify the increase in Web filtering statistics.

**Action** From the top of the configuration in configuration mode, enter the **show security utm web-filtering statistics** command.

## Example: Configuring Site Reputation Action for Enhanced Web Filtering

### Supported Platforms [SRX Series](#)

This example shows how to configure the site reputation action for both categorized and uncategorized URLs.

- [Requirements on page 637](#)
- [Overview on page 637](#)
- [Configuration on page 637](#)
- [Verification on page 640](#)

### Requirements

Before you begin, you should be familiar with Web Filtering and Enhanced Web Filtering. See [“Web Filtering Overview” on page 611](#) and [“Understanding Enhanced Web Filtering” on page 615](#).

### Overview

In this example, you configure Web Filtering profiles to URLs according to defined categories using the site reputation action. You set the URL whitelist filtering category to `url-cat-white` and the type of Web Filtering engine to `juniper-enhanced`. Then you set the cache size parameters for Web Filtering and the cache timeout parameters to 1.

Then you create a juniper-enhanced profile called profile `ewf-test-profile`, set the URL whitelist category to `cust-cat-quarantine`, and set the reputation action to `quarantine`.

You enter a custom message to be sent when HTTP requests are quarantined. In this example, the following message is sent: `***The requested webpage is blocked by your organization's access policy***`.

You block URLs in the `Enhanced_News_and_Media` category and permit URLs in the `Enhanced_Education` category. Then you quarantine the URLs in the `Enhanced_Streaming_Media` category and configure the device to send the following message: `***The requested webpage is blocked by your organization's access policy***`.

In this example, you set the default action to permit. You select fallback settings (block or log and permit) for this profile in case errors occur in each configured category. Finally, you set the fallback settings to block.

### Configuration

#### *Configuring Site Reputation Action*

#### CLI Quick Configuration

To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile web-filtering set url-whitelist url-cat-white
set security utm feature-profile web-filtering juniper-enhanced cache size
```

```
set security utm feature-profile web-filtering juniper-enhanced cache timeout 1
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  category cust-cat-quarantine action quarantine
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  category Enhanced_News_and_Media action block
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  category Enhanced_Education action permit
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  category Enhanced_Education reputation-action harmful block
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  category Enhanced_Streaming_Media action quarantine
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  default permit
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  default quarantine-message "*** The requested webpage is blocked by your
  organization's access policy***".
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  fallback-settings server-connectivity block
set security utm feature-profile web-filtering juniper-enhanced profile ewf-test-profile
  fallback-settings timeout block
```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure the site reputation action:

1. Configure the Web Filtering URL whitelist.  

```
[edit security utm feature-profile web-filtering]
user@host# set url-whitelist custwhitelist
```
2. Specify the Enhanced Web Filtering engine, and set the cache size parameters.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced cache size
```
3. Set the cache timeout parameters.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced cache timeout 1
```
4. Create a profile name, and select a category from the whitelist categories.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile ewf-test-profile category
  cust-cat-quarantine action quarantine
```
5. Create a profile name, and select a category from the whitelist categories.  

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile ewf-test-profile category
  Enhanced_News_and_Media action block
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile ewf-test-profile category
  Enhanced_Education action permit
user@host# set juniper-enhanced profile ewf-test-profile category
  Enhanced_Education action harmful block
[edit security utm feature-profile web-filtering]
```

```
user@host# set juniper-enhanced profile ewf-test-profile category
Enhanced_Streaming_Media action quarantine
```

6. Enter a warning message to be sent when HTTP requests are quarantined.

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile ewf-test-profile
quarantine-custom-message "***The requested webpage is blocked by your
organization's access policy ***"
```

7. Select a default action (permit, log and permit, block, or quarantine) for the profile, when no other explicitly configured action (blacklist, whitelist, custom category, predefined category or site reputation ) is matched .

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile ewf-test-profile default permit
```

8. Select fallback settings (block or log and permit) for this profile.

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-enhanced profile ewf-test-profile fallback-settings
server-connectivity block
user@host# set juniper-enhanced profile ewf-test-profile fallback-settings timeout
block
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm** command. If the output does not display the intended configuration, repeat the instructions in this example to correct.

```
[edit]
user@host# show security utm
feature-profile {
  web-filtering {
    url-whitelist url-cat-white;
    type juniper-enhanced;
    traceoptions;
    flag all;
  }
  juniper-enhanced {
    cache {
      timeout 1
    }
    profile ewf-test-profile {
      category {
        cust-cat-quarantine {
          action quarantine;
        }
        Enhanced_News_and_Media {
          action block;
          reputation-action;
        }
        Enhanced_Education {
          action permit;
          reputation-action;
        }
        {
          harmful block;
        }
      }
    }
  }
}
```

```
    }
    Enhanced_Streaming_Media {
    action quarantine;
    }
  }
  default permit;
  quarantine-custom-message "***The requested webpage is blocked by your
organization's access policy***".
  fallback-settings {
    server-connectivity block;
    timeout block;
  }
}
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

Confirm that the configuration is working properly.

- [Verifying the Status of UTM Service on page 640](#)
- [Verifying the Status of UTM Session on page 640](#)
- [Verifying the Status of UTM Web Filtering on page 641](#)
- [Verifying the Statistics of UTM Web Filtering on page 641](#)

#### *Verifying the Status of UTM Service*

**Purpose** Verify the UTM service status.

**Action** From operational mode, enter the **show security utm status** command.

### Sample Output

```
user@host>show security utm status
UTM service status: Running
```

#### *Verifying the Status of UTM Session*

**Purpose** Verify the UTM session status.

**Action** From operational mode, enter the **show security utm session** command.

### Sample Output

```
user@host>show security utm session
UTM session info:
Maximum sessions:           4000
Total allocated sessions:    0
Total freed sessions:        0
Active sessions:             0
```

**Verifying the Status of UTM Web Filtering**

**Purpose** Verify the UTM Web filtering status.

**Action** From operational mode, enter the **show security utm web-filtering status** command.

**Sample Output**

```
user@host>show security utm web-filtering status
UTM web-filtering status:
  Server status: Juniper Enhanced using Websense server UP
```

**Verifying the Statistics of UTM Web Filtering**

**Purpose** Verify the Web filtering statistics for connections including whitelist and blacklist hits and custom category hits.

**Action** From operational mode, enter the **show security utm web-filtering statistics** command.

**Sample Output**

```
user@host>show security utm web-filtering statistics
UTM web-filtering statistics:
  Total requests:                2594
  white list hit:                 0
  Black list hit:                 0
  Queries to server:             2407
  Server reply permit:           1829
  Server reply block:             0
  Server reply quarantine:        517
  Server reply quarantine block:  0
  Server reply quarantine permit: 8
  Custom category permit:         0
  Custom category block:          0
  Custom category quarantine:     0
  Custom category quarantine block: 0
  Custom category quarantine permit: 0
  Site reputation permit:         0
  Site reputation block:          0
  Site reputation quarantine:     0
  Site reputation quarantine block: 0
  Site reputation quarantine permit: 0
  Site reputation by Category     0
  Site reputation by Global       0
  Cache hit permit:               41
  Cache hit block:                 0
  Cache hit quarantine:           144
  Cache hit quarantine block:     0
  Cache hit quarantine permit:    1
  Safe-search redirect:           0
  Web-filtering sessions in total: 16000
  Web-filtering sessions in use:  0
  Fallback:
    log-and-permit                block
    Default                      0      0
    Timeout                      0      0
    Connectivity                  0      1
    Too-many-requests             0      0
```

## Example: Configuring Integrated Web Filtering

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

This example shows how to configure integrated Web filtering.

- [Requirements on page 642](#)
- [Overview on page 642](#)
- [Configuration on page 643](#)
- [Verification on page 649](#)

### Requirements

---

Before you begin, learn more about Web filtering. See [“Web Filtering Overview” on page 611](#).

### Overview

---

In this example you configure integrated Web filtering custom objects, integrated Web filtering feature profiles, and integrated Web filtering UTM policies. You also attach integrated Web filtering UTM policies to security policies.

In the first example configuration you create a custom object called `urllist3` that contains the pattern `http://www.example.net 1.2.3.4`. The `urllist3` custom object is then added to the custom URL category `custurl3`.

In the second example configuration, you configure the Web filtering feature profile. You set the URL blacklist filtering category to `custblacklist`, set the whitelist filtering category to `custwhitelist` and the type of Web filtering engine to `surf-control-integrated`. Then you set the cache size parameters for Web filtering to 500 KB, which is the default, and the cache timeout parameters to 1800.

You name the Surf Control server as `surfcontrolserver` and enter 8080 as the port number for communicating with it. (Default ports are 80, 8080, and 8081.) Then you create a `surf-control-integrated` profile name called `surfprofile1`.

Next you select a category from the included whitelist and blacklist categories or select a custom URL category list you created for filtering against. Then you enter an action (permit, log and permit, block) to go with the filter. You do this as many times as necessary

to compile your whitelists and blacklists and their accompanying actions. This example blocks URLs in the custurl3 category.

Then you enter a custom message to be sent when HTTP requests are blocked. This example configures the device to send an **\*\*\*access denied\*\*\*** message. You select a default action (permit, log and permit, block) for this profile for requests that experience errors. This example sets the default action to block. You select fallback settings (block or log and permit) for this profile, in case errors occur in each configured category. This example sets fallback settings to block.

Finally, you enter a timeout value in seconds. Once this limit is reached, fail mode settings are applied. The default is 10 seconds, and you can enter a value from 10 to 240 seconds. This example sets the timeout value to 10.

In the third example configuration, you create UTM policy utmp5 and attach it to profile surfprofile1.

In the final example configuration, you attach the UTM policy utmp5 to the security policy p5.

## Configuration

- [Attaching Integrated Web Filtering UTM Policies to Security Policies on page 648](#)

### Configuring Integrated Web Filtering Custom Objects

#### CLI Quick Configuration

To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm custom-objects url-pattern urllist3 value http://www.example.net
set security utm custom-objects url-pattern urllist3 value 1.2.3.4
set security utm custom-objects url-pattern urllistblack value http://www.untrusted.com
set security utm custom-objects url-pattern urllistblack value 13.13.13.13
set security utm custom-objects url-pattern urllistwhite value http://www.trusted.com
set security utm custom-objects url-pattern urllistwhite value 7.7.7.7
set security utm custom-objects custom-url-category custurl3 value urllist3
set security utm custom-objects custom-url-category custblacklist value urllistblack
set security utm custom-objects custom-url-category custwhitelist value urllistwhite
```

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

**Step-by-Step  
Procedure**

To configure integrated Web filtering:

1. Create custom objects and create the URL pattern list.  

```
[edit security utm]
user@host# set custom-objects url-pattern urllist3 value [http://www.example.net
1.2.3.4]
```
2. Configure the custom URL category list custom object using the URL pattern list.  

```
[edit security utm]
user@host# set custom-objects custom-url-category custurl3 value urllist3
```
3. Create a list of untrusted sites  

```
[edit security utm]
user@host# set custom-objects url-pattern urllistblack value
[http://www.untrusted.com 13.13.13.13]
```
4. Configure the custom URL category list custom object using the URL pattern list of untrusted sites.  

```
[edit security utm]
user@host# set custom-objects custom-url-category custblacklist value urllistblack
```
5. Create a list of trusted sites.  

```
[edit security utm]
user@host# set custom-objects url-pattern urllistwhite value
[http://www.trusted.com 7.7.7.7]
```
6. Configure the custom URL category list custom object using the URL pattern list of trusted sites.  

```
[edit security utm]
user@host# set custom-objects custom-url-category custwhitelist value urllistwhite
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm custom-objects** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

For brevity, this show command output includes only the configuration that is relevant to this example. Any other configuration on the system has been replaced with ellipses (...).

```
[edit]
userhost#show security utm custom-objects
url-pattern {
  urllist3 {
    value [ http://www.example.net ];
  }
  urllistblack {
    value [ http://www.untrusted.com 13.13.13.13 ];
  }
  urllistwhite {
    value [ http://www.trusted.com 7.7.7.7 ];
  }
}
custom-url-category {
```

```

    custurl3 {
        value urllist3;
    }
    custblacklist {
        value urllistblack;
    }
    custwhitelist {
        value urllistwhite;
    }
}

```

If you are done configuring the device, enter **commit** from configuration mode.

### *Configuring the Integrated Web Filtering Feature Profiles*

#### **CLI Quick Configuration**

To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```

set security utm feature-profile web-filtering url-whitelist custwhitelist
set security utm feature-profile web-filtering url-blacklist custblacklist
set security utm feature-profile web-filtering surf-control-integrated cache timeout 1800
set security utm feature-profile web-filtering surf-control-integrated cache size 500
set security utm feature-profile web-filtering surf-control-integrated server host
  surfcontrolserver
set security utm feature-profile web-filtering surf-control-integrated server port 8080
set security utm feature-profile web-filtering surf-control-integrated profile surfprofile1
  category custurl3 action block
set security utm feature-profile web-filtering surf-control-integrated profile surfprofile1
  default block
set security utm feature-profile web-filtering surf-control-integrated profile surfprofile1
  custom-block-message "***access denied ***"
set security utm feature-profile web-filtering surf-control-integrated profile surfprofile1
  fallback-settings default block
set security utm feature-profile web-filtering surf-control-integrated profile surfprofile1
  fallback-settings server-connectivity block
set security utm feature-profile web-filtering surf-control-integrated profile surfprofile1
  fallback-settings timeout block
set security utm feature-profile web-filtering surf-control-integrated profile surfprofile1
  fallback-settings too-many-requests block
set security utm feature-profile web-filtering surf-control-integrated profile surfprofile1
  timeout 10
set security utm feature-profile content-filtering profile contentfilter1

```

#### **Step-by-Step Procedure**

The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure integrated Web filtering feature profiles:

1. Configure the Web filtering URL Black List.

```

[edit security utm feature-profile web-filtering]
user@host# set url-blacklist custblacklist

```

2. Configure the Web filtering URL White List.  

```
[edit security utm feature-profile web-filtering]
user@host# set url-whitelist custwhitelist
```
3. Specify the surf-control-integrated Web filtering engine and set the cache size parameters.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated cache size 500
```
4. Set the cache timeout parameters.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated cache timeout 1800
```
5. Set the server name or IP address.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated server host surfcontrolserver
```
6. Enter the port number for communicating with the server.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated server port 8080
```
7. Create a profile name and select a category from the included whitelist and blacklist categories.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated profile surfprofile1 category custurl3 action
block
```
8. Enter a custom message to be sent when HTTP requests are blocked.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated profile surfprofile1 custom-block-message
"***access denied***"
```
9. Select a default action (permit, log and permit, block) for this profile for requests that experience errors.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated profile surfprofile1 default block
```
10. Select fallback settings (block or log and permit) for this profile.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated profile surfprofile1 fallback-settings default
block

user@host# set surf-control-integrated profile surfprofile1 fallback-settings
server-connectivity block
user@host# set surf-control-integrated profile surfprofile1 fallback-settings timeout
block
user@host# set surf-control-integrated profile surfprofile1 fallback-settings
too-many-requests block
```
11. Enter a timeout value, in seconds.  

```
[edit security utm feature-profile web-filtering]
user@host# set surf-control-integrated profile surfprofile1 timeout 10
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm feature-profile** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security utm feature-profile
web-filtering {
  url-whitelist custwhitelist;
  url-blacklist custblacklist;
  type juniper-local;
  surf-control-integrated {
    cache {
      timeout 1800;
      size 500;
    }
    server {
      host surfcontrolserver;
      port 8080;
    }
    profile surfprofile1 {
      category {
        custurl3 {
          action block;
        }
      }
      default block;
      custom-block-message "***access denied ***";
      fallback-settings {
        default block;
        server-connectivity block;
        timeout block;
        too-many-requests block;
      }
      timeout 10;
    }
  }
  content-filtering {
    profile contentfilter1;
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### *Configuring Integrated Web Filtering UTM Policies*

**CLI Quick Configuration** To quickly configure this section of the example, copy the following command, paste it into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the command into the CLI at the **[edit]** hierarchy level.

```
set security utm utm-policy utmp5 web-filtering http-profile surfprofile1
```

**Step-by-Step Procedure** To configure a UTM policy:

1. Create the UTM policy referencing a profile.

```
[edit]
user@host# set security utm utm-policy utmp5 web-filtering http-profile surfprofile1
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm utm-policy** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security utm utm-policy
...
  utm-policy utmp5 {
    content-filtering {
      http-profile contentfilter1;
    }
    web-filtering {
      http-profile surfprofile1;
    }
  }
```

If you are done configuring the device, enter **commit** from configuration mode.

#### *Attaching Integrated Web Filtering UTM Policies to Security Policies*

**CLI Quick Configuration** To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security policies from-zone trust to-zone untrust policy p5 match source-address any
set security policies from-zone trust to-zone untrust policy p5 match destination-address
any
set security policies from-zone trust to-zone untrust policy p5 match application junos-http
set security policies from-zone trust to-zone untrust policy p5 then permit
application-services utm-policy utmp5
```

**Step-by-Step Procedure** To attach a UTM policy to a security policy:

1. Create and configure the security policy.

```
[edit security policies from-zone trust to-zone untrust policy p5]
user@host# set match source-address any
user@host# set match destination-address any
user@host# set match application junos-http
```
2. Attach the UTM policy to the security policy.

```
[edit security policies from-zone trust to-zone untrust policy p5]
user@host# set then permit application-services utm-policy utmp5
```

**Results** From configuration mode, confirm your configuration by entering the **show security policies** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security policies
```

```

from-zone trust to-zone untrust {
  policy p5 {
    match {
      source-address any;
      destination-address any;
      application junos-http;
    }
    then {
      permit {
        application-services {
          utm-policy utmp5;
        }
      }
    }
  }
}

```

If you are done configuring the device, enter **commit** from configuration mode.

## Verification

To confirm that the configuration is working properly, perform these tasks:

**Example: Configuring Local Web Filtering**

**Supported Platforms**    [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

This example shows how to configure local Web filtering.

- [Requirements on page 650](#)
- [Overview on page 650](#)
- [Configuration on page 651](#)
- [Verification on page 655](#)

---

**Requirements**

Before you begin, learn more about Web filtering. See “[Web Filtering Overview](#)” on page 611.

---

**Overview**

In this example you configure local Web filtering custom objects, local Web filtering feature profiles, and local Web filtering UTM policies. You also attach local Web filtering UTM policies to security policies.

In the first example configuration you create custom objects called `urllist5` and `urllist6` that contains the patterns `http://www.example.net 1.2.3.4` and `http://www.example.com 1.2.3.4` respectively. The `urllist5` and `urllist6` custom objects are then added to the custom URL category `custurl5` and `custurl6`.

In the second example configuration, you configure the Web filtering feature profile. You set the URL blacklist filtering category to `custurl4` and URL whitelist filtering category to `custurl3`. You set the type of Web filtering engine to `juniper-local`.

Then you create a `juniper-local` profile name called `localprofile1`. You select a default action (permit, log and permit, block) for this profile for requests that experience errors. This example sets the default action to permit.

Then you enter a custom message to be sent when HTTP requests are blocked. This example configures the device to send an **\*\*\*Access to this site is not permitted\*\*\*** message. You select fallback settings (block or log and permit) for this profile, in case errors occur in each configured category. This example sets fallback settings to block.

In the third example configuration, you create UTM policy utmp5 and attach it to profile localprofile1.

In the final example configuration, you attach the UTM policy utmp5 to the security policy p5.

### Configuration

- [Configuring Local Web Filtering Custom Objects on page 651](#)
- [Configuring the Local Web Filtering Feature Profiles on page 652](#)
- [Configuring Local Web Filtering UTM Policies on page 653](#)
- [Attaching Local Web Filtering UTM Policies to Security Policies on page 654](#)

#### Configuring Local Web Filtering Custom Objects

#### CLI Quick Configuration

To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm custom-objects url-pattern urllist5 value http://www.example.net
set security utm custom-objects url-pattern urllist5 value 1.2.3.4
set security utm custom-objects url-pattern urllist6 value http://www.example.com
set security utm custom-objects url-pattern urllist6 value 1.2.3.4
set security utm custom-objects custom-url-category custurl5 value urllist5
set security utm custom-objects custom-url-category custurl6 value urllist6
```

#### Step-by-Step Procedure

To configure local Web filtering using the CLI:

1. Create custom objects and URL pattern lists.

```
[edit]
user@host# set security utm custom-objects url-pattern urllist5 value
[http://www.example.net 1.2.3.4]
user@host# set security utm custom-objects url-pattern urllist6 value
[http://www.example.com 1.2.3.4]
```

2. Configure the custom URL category list custom object using the URL pattern list.

```
[edit]
user@host# set security utm custom-objects custom-url-category custurl5 value
urllist5
user@host# set security utm custom-objects custom-url-category custurl6 value
urllist6
```

#### Results

From configuration mode, confirm your configuration by entering the **show security utm custom-objects** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security utm custom-objects
  url-pattern {
    urllist5 {
      value [ http://www.example.net 1.2.3.4 ];
    }
    urllist6 {
      value [ http://www.example.com 1.2.3.4 ];
    }
  }
  custom-url-category {
    custurl5 {
      value urllist5;
    }
    custurl6 {
      value urllist6;
    }
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### ***Configuring the Local Web Filtering Feature Profiles***

**CLI Quick Configuration** To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile web-filtering url-whitelist custurl3
set security utm feature-profile web-filtering url-blacklist custurl4
set security utm feature-profile web-filtering type juniper-local
set security utm feature-profile web-filtering juniper-local profile localprofile1 default
  permit
set security utm feature-profile web-filtering juniper-local profile localprofile1
  custom-block-message "Access to this site is not permitted."
set security utm feature-profile web-filtering juniper-local profile localprofile1
  fallback-settings default block
set security utm feature-profile web-filtering juniper-local profile localprofile1
  fallback-settings too-many-requests block
set security utm feature-profile content-filtering profile contentfilter1
```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure local Web filtering feature profiles:

1. Configure the Web filtering feature profiles.  

```
[edit security utm feature-profile web-filtering]
user@host# set url-whitelist custurl3
user@host# set url-blacklist custurl4
```
2. Select the Web filtering engine.  

```
[edit security utm feature-profile web-filtering]
```

```
user@host# set type juniper-local
```

3. Select a default action (permit, log and permit, block) for this profile for requests that experience errors.

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-local profile localprofile1 default permit
```

4. Enter a custom message to be sent when HTTP requests are blocked.

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-local profile localprofile1 custom-block-message "Access
to this site is not permitted"
```

5. Select fallback settings (block or log and permit) for this profile.

```
[edit security utm feature-profile web-filtering]
user@host# set juniper-local profile localprofile1 fallback-settings default block
set security utm feature-profile web-filtering juniper-local profile localprofile1
fallback-settings too-many-requests block
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm feature-profile** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security utm feature-profile
web-filtering {
  url-whitelist custurl3;
  url-blacklist custurl4;
  type juniper-local;
  juniper-local {
    profile localprofile1 {
      default permit;
      custom-block-message "Access to this site is not permitted.";
      fallback-settings {
        default block;
        too-many-requests block;
      }
    }
  }
}
content-filtering {
  profile contentfilter1;
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### *Configuring Local Web Filtering UTM Policies*

**CLI Quick Configuration** To quickly configure this section of the example, copy the following command, paste it into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the command into the CLI at the **[edit]** hierarchy level.

```
et security utm utm-policy utmp5 web-filtering http-profile localprofile1
```

**Step-by-Step  
Procedure**

To configure a UTM policy:

1. Create the UTM policy referencing a profile.

[edit]

```
user@host# set security utm utm-policy utmp5 web-filtering http-profile localprofile1
```

**Results**

From configuration mode, confirm your configuration by entering the **show security utm** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

For brevity, this show command output includes only the configuration that is relevant to this example. Any other configuration on the system has been replaced with ellipses (...).

[edit]

```
userhost#show security utm
utm-policy utmp5 {
  web-filtering {
    http-profile localprofile1;
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

***Attaching Local Web Filtering UTM Policies to Security Policies*****CLI Quick  
Configuration**

To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security policies from-zone trust to-zone untrust policy p5 match source-address any
set security policies from-zone trust to-zone untrust policy p5 match destination-address
any
set security policies from-zone trust to-zone untrust policy p5 match application junos-http
set security policies from-zone trust to-zone untrust policy p5 then permit
application-services utm-policy utmp5
```

**Step-by-Step  
Procedure**

To attach a UTM policy to a security policy:

1. Create and configure the security policy.

[edit security policies from-zone trust to-zone untrust policy p5]

```
user@host# set match source-address any
```

```
user@host# set match destination-address any
```

```
user@host# set match application junos-http
```

2. Attach the UTM policy to the security policy.

[edit security policies from-zone trust to-zone untrust policy p5]

```
user@host# set then permit application-services utm-policy utmp5
```

**Results** From configuration mode, confirm your configuration by entering the **show security policies** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security policies
  from-zone trust to-zone untrust {
    policy p5 {
      match {
        source-address any;
        destination-address any;
        application junos-http;
      }
      then {
        permit {
          application-services {
            utm-policy utmp5;
          }
        }
      }
    }
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### Verification

To confirm that the configuration is working properly, perform these tasks:

- [Verifying the Configuration of Local Web Filtering Custom Objects on page 655](#)
- [Verifying the Configuration of Local Web Filtering Feature Profiles on page 655](#)
- [Verifying the Configuration of Local Web Filtering UTM Policies on page 655](#)
- [Verifying the Attachment of Local Web Filtering UTM Policies to Security Policies on page 656](#)

#### *Verifying the Configuration of Local Web Filtering Custom Objects*

**Purpose** Verify the configuration of local Web filtering custom objects.

**Action** From operational mode, enter the **show security utm custom-objects** command.

#### *Verifying the Configuration of Local Web Filtering Feature Profiles*

**Purpose** Verify the configuration of local Web filtering feature profiles.

**Action** From operational mode, enter the **show security utm feature-profile** command.

#### *Verifying the Configuration of Local Web Filtering UTM Policies*

**Purpose** Verify the configuration of local Web filtering UTM policies.

**Action** From operational mode, enter the **show security utm** command.

***Verifying the Attachment of Local Web Filtering UTM Policies to Security Policies***

**Purpose** Verify the attachment of local Web filtering UTM policies to security policies.

**Action** From operational mode, enter the **show security policies** command.

**Example: Configuring Redirect Web Filtering**

**Supported Platforms** [SRX100](#), [SRX110](#), [SRX210](#), [SRX220](#), [SRX240](#), [SRX550](#), [SRX650](#)

This example shows how to configure redirect Web filtering.

- [Requirements on page 656](#)
- [Overview on page 656](#)
- [Configuration on page 657](#)
- [Verification on page 662](#)

---

**Requirements**

Before you begin, learn more about Web filtering. See [“Web Filtering Overview” on page 611](#).

---

**Overview**

In this example you configure redirect Web filtering custom objects, redirect Web filtering feature profiles, and redirect Web filtering UTM policies. You also attach redirect Web filtering UTM policies to security policies.

In the first example configuration you create a custom object called `urllist4` that contains the pattern `http://www.juniper.net 1.2.3.4`. The `urllist4` custom object is then added to the custom URL category `custurl4`.

In the second example configuration, you configure the Web filtering feature profile. You set the URL blacklist filtering category to `custblacklist` and the type of Web filtering engine to  `Websense-redirect`.

You create a `Websense-redirect` profile name called `websenseprofile1`. Then you name the Web sense server as `Websenseserver` and enter 8080 as the port number for communicating with it. (Default ports are 80, 8080, and 8081.)

You select fallback settings (block or log and permit) for this profile, in case errors occur in each configured category. This example sets fallback settings to block. You enter the

number of sockets used for communicating between the client and the server. The default is 1.

Finally, you enter a timeout value in seconds. Once this limit is reached, fail mode settings are applied. The default is 10 seconds, and you can enter a value from 10 to 240 seconds. This example sets the timeout value to 10.

In the third example configuration, you create UTM policy utmp6 and attach it to profile websenseprofile1.

In the final example configuration, you attach the UTM policy utmp6 to the security policy p6.

### Configuration

- [Configuring Redirect Web Filtering Custom Objects on page 657](#)
- [Configuring the Redirect Web Filtering Feature Profiles on page 659](#)
- [Configuring Redirect Web Filtering UTM Policies on page 660](#)
- [Attaching Redirect Web Filtering UTM Policies to Security Policies on page 661](#)

#### *Configuring Redirect Web Filtering Custom Objects*

#### CLI Quick Configuration

To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm custom-objects url-pattern urllist4 value 1.2.3.4
set security utm custom-objects url-pattern urllistblack value http://www.untrusted.com
set security utm custom-objects url-pattern urllistblack value 13.13.13.13
set security utm custom-objects url-pattern urllistwhite value http://www.trusted.com
set security utm custom-objects url-pattern urllistwhite value 7.7.7.7
set security utm custom-objects custom-url-category custurl4 value urllist4
set security utm custom-objects custom-url-category custblacklist value urllistblack
set security utm custom-objects custom-url-category custwhitelist value urllistwhite
```

#### Step-by-Step Procedure

To configure redirect Web filtering:

1. Create custom objects and create the URL pattern list.  

```
[edit security utm]
user@host# set custom-objects url-pattern urllist4 value [http://www.juniper.net 1.2.3.4]
```
2. Configure the custom URL category list custom object using the URL pattern list.  

```
[edit security utm]
user@host# set custom-objects custom-url-category custurl4 value urllist4
```
3. Create a list of untrusted sites  

```
[edit security utm]
user@host# set custom-objects url-pattern urllistblack value [http://www.untrusted.com 13.13.13.13]
```

4. Configure the custom URL category list custom object using the URL pattern list of untrusted sites.

```
[edit security utm]
user@host# set custom-objects custom-url-category custblacklist value urllistblack
```

5. Create a list of trusted sites.

```
[edit security utm]
user@host# set custom-objects url-pattern urllistwhite value
[http://www.trusted.com 7.7.7.7]
```

6. Configure the custom URL category list custom object using the URL pattern list of trusted sites.

```
[edit security utm]
user@host# set custom-objects custom-url-category custwhitelist value urllistwhite
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm custom-objects** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

For brevity, this show command output includes only the configuration that is relevant to this example. Any other configuration on the system has been replaced with ellipses (...).

```
[edit]
userhost#show security utm custom-objects
url-pattern {
  urllist4 {
    value [ http://www.juniper.net 1.2.3.4 ];
  }
  urllistblack {
    value [ http://www.untrusted.com 13.13.13.13 ];
  }
  urllistwhite {
    value [ http://www.trusted.com 7.7.7.7 ];
  }
}
custom-url-category {
  custurl4 {
    value urllist4;
  }
  custblacklist {
    value urllistblack;
  }
  custwhitelist {
    value urllistwhite;
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### Configuring the Redirect Web Filtering Feature Profiles

**CLI Quick Configuration** To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security utm feature-profile web-filtering url-whitelist custwhitelist
set security utm feature-profile web-filtering url-blacklist custblacklist
set security utm feature-profile web-filtering type juniper-local set security utm
  feature-profile web-filtering websense-redirect profile websenseprofile1 server host
  Websenseserver
set security utm feature-profile web-filtering websense-redirect profile websenseprofile1
  server port 8080
set security utm feature-profile web-filtering websense-redirect profile websenseprofile1
  fallback-settings server-connectivity block
set security utm feature-profile web-filtering websense-redirect profile websenseprofile1
  fallback-settings timeout block
set security utm feature-profile web-filtering websense-redirect profile websenseprofile1
  fallback-settings too-many-requests block
set security utm feature-profile web-filtering websense-redirect profile websenseprofile1
  timeout 10
set security utm feature-profile web-filtering websense-redirect profile websenseprofile1
  sockets 1
```

**Step-by-Step Procedure** The following example requires you to navigate various levels in the configuration hierarchy. For instructions on how to do that, see *Using the CLI Editor in Configuration Mode*.

To configure redirect Web filtering feature profiles:

1. Configure the Web filtering URL Black List.  

```
[edit security utm feature-profile web-filtering]
user@host# set url-blacklist custblacklist
```
2. Configure the Web filtering URL White List.  

```
[edit security utm feature-profile web-filtering]
user@host# set url-whitelist custwhitelist
```
3. Specify the web-filtering type, create a profile name, and set the server name or IP address.  

```
[edit security utm feature-profile web-filtering]
user@host# set websense-redirect profile websenseprofile1 server host
  Websenseserver
```
4. Enter the port number for communicating with the server.  

```
[edit security utm feature-profile web-filtering]
user@host# set websense-redirect profile websenseprofile1 server port 8080
```
5. Select fallback settings (block or log and permit) for this profile.  

```
[edit security utm feature-profile web-filtering]
user@host# set websense-redirect profile websenseprofile1 fallback-settings default
  block
```

```
user@host# set websense-redirect profile websenseprofile1 fallback-settings
server-connectivity block
user@host# set websense-redirect profile websenseprofile1 fallback-settings
timeout block
user@host# set websense-redirect profile websenseprofile1 fallback-settings
too-many-requests block
```

6. Enter the number of sockets used for communicating between the client and server.

```
[edit security utm feature-profile web-filtering]
user@host# set websense-redirect profile websenseprofile1 sockets 1
```

7. Enter a timeout value, in seconds.

```
[edit security utm feature-profile web-filtering]
user@host# set .websense-redirect profile websenseprofile1 timeout 10
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm feature-profile** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security utm feature-profile
web-filtering {
  url-whitelist custwhitelist;
  url-blacklist custblacklist;
  type websense-redirect {
    profile websenseprofile1 {
      server {
        host Websenseserver;
        port 8080;
      }
      fallback-settings {
        server-connectivity block;
        timeout block;
        too-many-requests block;
      }
      timeout 10;
      sockets 1;
    }
  }
}
content-filtering {
  profile contentfilter1;
}
```

If you are done configuring the device, enter **commit** from configuration mode.

### *Configuring Redirect Web Filtering UTM Policies*

**CLI Quick Configuration** To quickly configure this section of the example, copy the following command, paste it into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the command into the CLI at the **[edit]** hierarchy level.

```
set security utm utm-policy utmp6 web-filtering http-profile websenseprofile1
```

**Step-by-Step Procedure**

To configure a UTM policy:

1. Create the UTM policy referencing a profile.

```
[edit security utm]
user@host# set utm-policy utmp6 web-filtering http-profile websenseprofile1
```

**Results** From configuration mode, confirm your configuration by entering the **show security utm** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

For brevity, this show command output includes only the configuration that is relevant to this example. Any other configuration on the system has been replaced with ellipses (...).

```
[edit]
userhost#show security utm
utm-policy utmp6 {
  web-filtering {
    http-profile websenseprofile1;
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

***Attaching Redirect Web Filtering UTM Policies to Security Policies***

**CLI Quick Configuration**

To quickly configure this section of the example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, and then copy and paste the commands into the CLI at the **[edit]** hierarchy level.

```
set security policies from-zone trust to-zone untrust policy p6 match source-address any
set security policies from-zone trust to-zone untrust policy p6 match destination-address any
set security policies from-zone trust to-zone untrust policy p6 match application junos-http
set security policies from-zone trust to-zone untrust policy p6 then permit application-services utm-policy utmp6
```

**Step-by-Step Procedure**

To attach a UTM policy to a security policy:

1. Create and configure the security policy.

```
[edit security policies from-zone trust to-zone untrust policy p6]
user@host# set match source-address any
user@host# set match destination-address any
user@host# set match application junos-http
```

2. Attach the UTM policy to the security policy.

```
[edit security policies from-zone trust to-zone untrust policy p6]
user@host# set then permit application-services utm-policy utmp6
```

**Results** From configuration mode, confirm your configuration by entering the **show security policies** command. If the output does not display the intended configuration, repeat the configuration instructions in this example to correct it.

```
[edit]
userhost#show security policies
  from-zone trust to-zone untrust {
    policy p6 {
      match {
        source-address any;
        destination-address any;
        application junos-http;
      }
      then {
        permit {
          application-services {
            utm-policy utmp6;
          }
        }
      }
    }
  }
}
```

If you are done configuring the device, enter **commit** from configuration mode.

---

### Verification

To confirm that the configuration is working properly, perform these tasks:

- [Verifying the Configuration of Redirect Web Filtering Custom Objects on page 662](#)
- [Verifying the Configuration of Redirect Web Filtering Feature Profiles on page 662](#)
- [Verifying the Configuration of Redirect Web Filtering UTM Policies on page 662](#)
- [Verifying the Attachment of Redirect Web Filtering UTM Policies to Security Policies on page 663](#)

#### *Verifying the Configuration of Redirect Web Filtering Custom Objects*

**Purpose** Verify the configuration of redirect Web filtering custom objects.

**Action** From the top of the configuration in configuration mode, enter the **show security utm custom-objects** command.

#### *Verifying the Configuration of Redirect Web Filtering Feature Profiles*

**Purpose** Verify the configuration of redirect Web filtering feature profiles.

**Action** From the top of the configuration in configuration mode, enter the **show security utm feature-profile** command.

#### *Verifying the Configuration of Redirect Web Filtering UTM Policies*

**Purpose** Verify the configuration of redirect Web filtering UTM policies.

**Action** From the top of the configuration in configuration mode, enter the **show security utm** command.

### *Verifying the Attachment of Redirect Web Filtering UTM Policies to Security Policies*

**Purpose** Verify the attachment of redirect Web filtering UTM policies to security policies.

**Action** From the top of the configuration in configuration mode, enter the **show security policies** command.

## Security Configuration Statement Hierarchy

### Supported Platforms [LN Series, SRX Series](#)

Use the statements in the **security** configuration hierarchy to configure actions, certificates, dynamic virtual private networks (VPNs), firewall authentication, flow, forwarding options, group VPNs, Intrusion Detection Prevention (IDP), Internet Key Exchange (IKE), Internet Protocol Security (IPsec), logging, Network Address Translation (NAT), public key infrastructure (PKI), policies, resource manager, rules, screens, secure shell known hosts, trace options, user identification, Unified Threat Management (UTM), and zones. Statements that are exclusive to the SRX Series devices running Junos OS are described in this section.

Each of the following topics lists the statements at a sub-hierarchy of the **[edit security]** hierarchy.

- *[edit security address-book] Hierarchy Level*
- *[edit security alarms] Hierarchy Level*
- *[edit security alg] Hierarchy Level*
- *[edit security analysis] Hierarchy Level*

## custom-objects

---

**Supported Platforms** [SRX Series](#)

**Syntax**

```
custom-objects {
  custom-url-category object-name {
    value [value];
  }
  filename-extension object-name {
    value [value];
  }
  mime-pattern object-name {
    value [value];
  }
  protocol-command object-name {
    value [value];
  }
  url-pattern object-name {
    value [value];
  }
}
```

**Hierarchy Level** [edit security utm]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Configure custom objects before configuring UTM feature-profile features.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommended having a custom category name be the same as the predefined category name.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level**

security—	To view this statement in the configuration.
security-control—	To add this statement to the configuration.

Hierarchy Level [edit security]

<b>Release Information</b>	Statement introduced in Junos OS Release 8.5. Support for the <b>services-offload</b> option added in Junos OS Release 11.4. Support for the <b>source-identity</b> option added in Junos OS Release 12.1. Support for the <b>description</b> option added in Junos OS Release 12.1. Support for the <b>ssl-termination-profile</b> and <b>web-redirect-to-https</b> options added in Junos OS Release 12.1X44-D10. Support for the <b>user-firewall</b> option added in Junos OS Release 12.1X45-D10. Support for the <b>domain</b> option, and for the <b>from-zone</b> and <b>to-zone</b> global policy match options added in Junos OS Release 12.1X47-D10.
<b>Description</b>	Configure network security policies.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Application Quality of Service Feature Guide for Security Devices</i></li><li>• <i>Security Policies Feature Guide for Security Devices</i></li><li>• <i>Junos OS Logical Systems Library for Security Devices</i></li><li>• <i>Junos OS UTM Library for Security Devices</i></li><li>• <i>Infranet Authentication Feature Guide for Security Devices</i></li></ul>

## custom-url-category

---

### Supported Platforms

**Syntax** `custom-url-category object-name {  
value [value];  
}`

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Use URL pattern lists to create Custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

- Options**
- ***object-name***—Name of the URL category-list object.
  - ***value value***—Value of the URL category-list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**

security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

- Related Documentation**
- [Understanding UTM Custom Objects on page 5](#)
  - *Junos OS UTM Library for Security Devices*
  - *UTM Full Antivirus Protection Feature Guide for Security Devices*

## filename-extension

---

### Supported Platforms

**Syntax** filename-extension *object-name* {  
value [*value*];  
}

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** When scanning content, you can use a file extension list to define a set of file extensions that are used in file extension scan mode (scan-by-extension).

**Options**

- ***object-name***—Name of the extension-list object.
- ***value value***—Value of the extension-list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**

security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

---

## mime-pattern

---

### Supported Platforms

**Syntax**    `mime-pattern object-name {  
                  value [value];  
                  }`

**Hierarchy Level**    `[edit security utm custom-objects]`

**Release Information**    Statement introduced in Junos OS Release 9.5.

**Description**    The gateway device uses MIME (Multipurpose Internet Mail Extension) types to decide which traffic is allowed to bypass various types of scanning.

**Options**

- ***object-name***—Name of the MIME object.
- ***value value***—Value of the MIME object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**    security—To view this statement in the configuration.  
                                         security-control—To add this statement to the configuration.

**Related Documentation**

## protocol-command

---

### Supported Platforms

**Syntax**    `protocol-command object-name {  
                  value [value];  
                  }`

**Hierarchy Level**    [edit security utm custom-objects]

**Release Information**    Statement introduced in Release 9.5 of Junos OS.

**Description**    Different protocols use different commands to communicate between servers and clients. By blocking or allowing certain commands, traffic can be controlled on the protocol command level.

**Options**

- ***object-name***—Name of the command-list object.
- ***value value***—Value of the command-list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**    security—To view this statement in the configuration.  
                                         security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*
- *UTM Full Antivirus Protection Feature Guide for Security Devices*

## url-pattern

### Supported Platforms

**Syntax** `url-pattern object-name {  
value [value];  
}`

**Hierarchy Level** [edit security utm custom-objects]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Use URL pattern lists to create custom URL category lists. These are lists of patterns that bypass scanning.

**WARNING:** Custom category does not take precedence over predefined categories when it has the same name as one of the predefined categories. We do not recommend having a custom category name be the same as the predefined category name.

**Options**

- ***object-name***—Name of the URL list object.
- ***value value***—Value of the URL list object. You can configure multiple values separated by spaces and enclosed in square brackets.

**Required Privilege Level**

security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## action (Security UTM Web Filtering)

---

**Supported Platforms** [SRX Series](#)

**Syntax** action (block | log-and-permit | permit | quarantine);

**Hierarchy Level** [edit security utm feature-profile web-filtering surf-control-integrated profile *profile-name* category *customurl-last-name*]  
[edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name* category *customurl-last-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.  
Statement introduced in Release 11.4 of Junos OS for UTM Enhanced Web Filtering.

**Description** Enter an action to go with the customurl-list filter.

- Options**
- block—Log the error and deny the traffic.
  - log-and-permit—Log the error and permit the traffic.
  - permit—Permit the traffic.
  - quarantine—Show the warning message and permit/block the traffic based on user input.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## block-message (Security UTM)

**Supported Platforms** [SRX Series](#)

**Syntax**

```
block-message {
  type {
    custom-redirect-url;
  }
  url url;
}
```

**Hierarchy Level** [edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name*]

**Release Information** Statement introduced in Junos OS Release 9.5.  
Statement introduced in Junos OS Release 11.4 for Enhanced Web Filtering.

**Description** Configure Juniper enhanced block message settings.

- Options**
- **type**—Specify the following type of the block message:
    - **custom-redirect-url**—Specify Custom redirect URL server.
  - **url *url***—Specify an URL of the block message.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## cache

---

**Supported Platforms** [SRX Series](#)

**Syntax**

```
cache {  
    size value;  
    timeout value;  
}
```

**Hierarchy Level** [edit security utm feature-profile web-filtering surf-control-integrated]  
[edit security utm feature-profile web-filtering juniper-enhanced]

**Release Information** Statement introduced in Junos OS Release 9.5 for Surf-Control-Integrated.  
Statement introduced in Junos OS Release 11.4 for Enhanced Web filtering.

**Description** Set the cache parameters for Surf-Control-Integrated Web filtering and Enhanced Web filtering. Cache size range is 0 through 4096 kilobytes. Cache timeout value is 1 through 1800 minutes (24 hours is the default and the maximum allowed life span of cached items).

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## category (Security Web Filtering)

---

**Supported Platforms** [SRX Series](#)

**Syntax** `category customurl-list name {  
 action (block | log-and-permit | permit | quarantine);  
}`

**Hierarchy Level** [edit security utm feature-profile web-filtering surf-control-integrated profile *profile-name*]  
[edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name*]

**Release Information** Statement introduced in Release 9.5 of Junos OS.  
Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering. Support for new categories and category name updates by Websense added in Junos OS Release 12.1X47-D15.

**Description** Select a custom URL category list you created (custom objects) for filtering against.

## default (Security Web Filtering)

---

**Supported Platforms** [SRX Series](#)

**Syntax** default (block | log-and-permit | permit | quarantine);

**Hierarchy Level** [edit security utm feature-profile web-filtering surf-control-integrated profile *profile-name* fallback-settings]  
[edit security utm feature-profile web-filtering websense-redirect profile *profile-name* fallback-settings]  
[edit security utm feature-profile web-filtering juniper-local profile *profile-name* fallback-settings]  
[edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name* fallback-settings]

**Release Information** Statement introduced in Junos OS Release 9.5.  
Statement introduced in Junos OS Release 11.4 for Enhanced Web Filtering.

**Description** Specify an action for the profile, for requests that experience internal errors in the Web-filtering module.

- Options**
- block—Log the error and deny the traffic.
  - log-and-permit—Log the error and permit the traffic.
  - permit —Permit the traffic.
  - quarantine—Show the warning message and permit/block the traffic based on user input.

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## http-profile (Security Web Filtering)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	http-profile <i>profile-name</i> ;
<b>Hierarchy Level</b>	[edit security utm utm-policy <i>policy-name</i> web-filtering]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	Configure a UTM policy for the Web-filtering HTTP protocol and attach this policy to a security profile to implement it.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>

## juniper-enhanced

**Supported Platforms** [SRX Series](#)

**Syntax**

```
juniper-enhanced {
  cache {
    size value;
    timeout value;
  }
  profile profile-name {
    category customurl-list name {
      action (block | log-and-permit | permit | quarantine);
    }
    custom-block-message value;
    custom-quarantine-message value;
    default (block | log-and-permit | permit | quarantine);
    fallback-settings {
      default (block | log-and-permit);
      server-connectivity (block | log-and-permit);
      timeout (block | log-and-permit);
      too-many-requests (block | log-and-permit);
    }
    no-safe-search;
    site-reputation-action {
      fairly-safe (block | log-and-permit | permit | quarantine);
      harmful (block | log-and-permit | permit | quarantine);
      moderately-safe (block | log-and-permit | permit | quarantine);
      suspicious (block | log-and-permit | permit | quarantine);
      very-safe (block | log-and-permit | permit | quarantine);
    }
    timeout value;
  }
  server {
    host host-name;
    port number;
  }
}
```

**Hierarchy Level** [set security utm feature-profile web-filtering]

**Release Information** Statement introduced in Release 11.4 of Junos OS.

**Description** Configure the UTM Enhanced Web Filtering feature.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## juniper-local

<b>Supported Platforms</b>	SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650
<b>Syntax</b>	<pre> juniper-local {   profile <i>profile-name</i> {     custom-block-message <i>value</i>;     default (block   log-and-permit   permit);     fallback-settings {       default (block   log-and-permit);       server-connectivity (block   log-and-permit);       timeout (block   log-and-permit);       too-many-requests (block   log-and-permit);     }     timeout <i>value</i>;   } } </pre>
<b>Hierarchy Level</b>	[set security utm feature-profile web-filtering]
<b>Release Information</b>	Statement introduced in Release 10.0 of Junos OS.
<b>Description</b>	Configure the UTM Web-filtering local feature.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Junos OS UTM Library for Security Devices</i></li> </ul>

## port (Security Web Filtering Server)

---

**Supported Platforms** [SRX Series](#)

**Syntax** `port number;`

**Hierarchy Level** [edit security utm feature-profile web-filtering surf-control-integrated server]  
[edit security utm feature-profile web-filtering websense-redirect profile *profile-name* server]  
[edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name* server]

**Release Information** Statement introduced in Release 9.5 of Junos OS.  
Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.

**Description** Enter the port number for communicating with the server. (Default ports are 80, 8080, and 8081.)

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## profile (Security Web Filtering Juniper Enhanced)

**Supported Platforms** [SRX Series](#)

**Syntax**

```
profile profile-name {
  category customurl-list name {
    action (block | log-and-permit | permit | quarantine);
  }
  custom-block-message value;
  custom-quarantine-message value;
  default (block | log-and-permit | permit | quarantine);
  fallback-settings {
    default (block | log-and-permit);
    server-connectivity (block | log-and-permit);
    timeout (block | log-and-permit);
    too-many-requests (block | log-and-permit);
  }
  no-safe-search;
  site-reputation-action {
    fairly-safe (block | log-and-permit | permit | quarantine);
    harmful (block | log-and-permit | permit | quarantine);
    moderately-safe (block | log-and-permit | permit | quarantine);
    suspicious (block | log-and-permit | permit | quarantine);
    very-safe (block | log-and-permit | permit | quarantine);
  }
  timeout value;
}
```

**Hierarchy Level** [edit security utm feature-profile web-filtering juniper-enhanced]

**Release Information** Statement introduced in Release 11.4 of Junos OS.

**Description** Create a profile for the juniper-enhanced feature. This profile includes all subsequent configuration options.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

## profile (Security Web Filtering Websense Redirect)

---

**Supported Platforms** [SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650](#)

**Syntax**

```
profile profile-name {
  account value;
  custom-block-message value;
  fallback-settings {
    default (block | log-and-permit);
    server-connectivity (block | log-and-permit);
    timeout (block | log-and-permit);
    too-many-requests (block | log-and-permit);
  }
  server {
    host host-name;
    port number;
  }
  sockets value;
  timeout value;
}
```

**Hierarchy Level** [security utm feature-profile web-filtering websense-redirect]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Create a profile for the web-filtering web-sense feature. This profile includes all subsequent configuration options.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

## quarantine-message (Security UTM)

**Supported Platforms** [SRX Series](#)

**Syntax**

```
quarantine-message {
  type {
    custom-redirect-url;
  }
  url url;
}
```

**Hierarchy Level** [edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name*]

**Release Information** Statement introduced in Junos OS Release 12.1X44-D10 for Enhanced Web Filtering.

**Description** Configure Juniper enhanced quarantine message settings.

- Options**
- **type**—Specify the following type of the quarantine message:
    - **custom-redirect-url**—Specify Custom redirect URL server.
  - **url *url***—Specify an URL of the quarantine message.

**Required Privilege Level**

security—To view this statement in the configuration.  
 security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## server (Security Web Filtering)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	<pre>server {     host <i>host-name</i>;     port <i>number</i>; }</pre>
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering surf-control-integrated] [edit security utm feature-profile web-filtering websense-redirect profile <i>profile-name</i> ] [edit security utm feature-profile web-filtering juniper-enhanced]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.
<b>Description</b>	Set server parameters by entering the server name or IP address.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>

## server-connectivity

---

**Supported Platforms** [SRX Series](#)

**Syntax** server-connectivity (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile web-filtering surf-control-integrated profile *profile-name* fallback-settings]  
 [edit security utm feature-profile web-filtering websense-redirect profile *profile-name* fallback-settings]  
 [edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name* fallback-settings]

**Release Information** Statement introduced in Release 9.5 of Junos OS.  
 Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.

**Description** Fallback settings tell the system how to handle errors. This is the action that occurs when a request fails for this reason.

- Options**
- block—Log the error and deny the traffic
  - log-and-permit—Log the error and permit the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
 security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## site-reputation-action

---

**Supported Platforms** [SRX Series](#)

**Syntax**

```
site-reputation-action {  
    harmful (block | log-and-permit | permit | quarantine);  
    fairly-safe (block | log-and-permit | permit | quarantine);  
    moderately-safe (block | log-and-permit | permit | quarantine);  
    suspicious (block | log-and-permit | permit | quarantine);  
    very-safe (block | log-and-permit | permit | quarantine);  
}
```

**Hierarchy Level** [edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name* category *category-name*]

**Release Information** Statement introduced in Release 11.4 of Junos OS.

**Description** Specify the action to be taken depending on the site reputation returned for all types of URLs whether it is categorized or uncategorized.

**Options** **fairly-safe**—Permit, log-and-permit, block or quarantine a request if a site-reputation of 70 through 79 is returned.

**harmful**—Permit, log-and-permit, block or quarantine a request if a site-reputation of zero through 59 is returned.

**moderately-safe**—Permit, log-and-permit, block or quarantine a request if a site-reputation of 80 through 89 is returned.

**suspicious**—Permit, log-and-permit, block or quarantine a request if a site-reputation of 60 through 69 is returned.

**very-safe**—Permit, log-and-permit, block or quarantine a request if a site-reputation of 90 through 100 is returned.

**Required Privilege** security—To view this statement in the configuration.

**Level** security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## size (Security Web Filtering Cache)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	<code>size value;</code>
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering surf-control-integrated cache] [edit security utm feature-profile web-filtering juniper-enhanced cache]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.
<b>Description</b>	Set the cache size parameters for web filtering.
<b>Options</b>	<b>Range:</b> 0 through 4096 kilobytes.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## sockets

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	<code>sockets value;</code>
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering websense-redirect profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS.
<b>Description</b>	Enter the number of sockets used for communicating between the client and server. The default is 1.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## surf-control-integrated

---

**Supported Platforms** SRX100, SRX110, SRX210, SRX220, SRX240, SRX550, SRX650

**Syntax**

```
surf-control-integrated {  
  cache {  
    size value;  
    timeout value;  
  }  
  profile profile-name {  
    category customurl-list name {  
      action (block | log-and-permit | permit);  
    }  
    custom-block-message value;  
    default (block | log-and-permit | permit);  
    fallback-settings {  
      default (block | log-and-permit);  
      server-connectivity (block | log-and-permit);  
      timeout (block | log-and-permit);  
      too-many-requests (block | log-and-permit);  
    }  
    timeout value;  
  }  
}  
server {  
  host host-name;  
  port number;  
}
```

**Hierarchy Level** [set security utm feature-profile web-filtering]

**Release Information** Statement introduced in Release 9.5 of Junos OS.

**Description** Configure the UTM web-filtering integrated feature.

**Options** The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## timeout (Security Web Filtering)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	timeout <i>value</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering websense-redirect profile <i>profile-name</i> ] [edit security utm feature-profile web-filtering juniper-enhanced profile <i>profile-name</i> ]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.
<b>Description</b>	Enter a timeout limit for requests. Once this limit is reached, fail mode settings are applied. The default here is 15 seconds.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## timeout (Security Web Filtering Cache)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	timeout <i>value</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering surf-control-integrated cache] [edit security utm feature-profile web-filtering juniper-enhanced cache]
<b>Release Information</b>	Statement introduced in Release 9.5 of Junos OS. Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.
<b>Description</b>	Set the cache timeout parameters for surf-control-integrated web filtering (24 hours is the default and the maximum allowed life span of cached items).
<b>Options</b>	<b>Range:</b> 1 through 1800 minutes.
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## timeout (Security Web Filtering Fallback Settings)

---

**Supported Platforms** [SRX Series](#)

**Syntax** timeout (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile web-filtering surf-control-integrated profile *profile-name* fallback-settings]  
[edit security utm feature-profile web-filtering websense-redirect profile *profile-name* fallback-settings]  
[edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name* fallback-settings]

**Release Information** Statement introduced in Release 9.5 of Junos OS.  
Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.

**Description** Fallback settings tell the system how to handle errors.

- Options**
- log-and-permit—Log the error and permit the traffic
  - block—Log the error and deny the traffic

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## too-many-requests (Security Web Filtering Fallback Settings)

**Supported Platforms** [SRX Series](#)

**Syntax** too-many-requests (block | log-and-permit);

**Hierarchy Level** [edit security utm feature-profile web-filtering surf-control-integrated profile *profile-name* fallback-settings]  
 [edit security utm feature-profile web-filtering websense-redirect profile *profile-name* fallback-settings]  
 [edit security utm feature-profile web-filtering juniper-enhanced profile *profile-name* fallback-settings]

**Release Information** Statement introduced in Release 9.5 of Junos OS.  
 Statement introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.

**Description** If the total number of messages received concurrently exceeds the device limits, the content is either passed or blocked depending on the too-many-request fallback option. The default action is BLOCK. (The allowed request limit is not configurable.)

**Options**

- block—Log the error and deny the traffic
- log-and-permit—Log the error and permit the traffic

**Required Privilege** security—To view this statement in the configuration.  
**Level** security-control—To add this statement to the configuration.

**Related Documentation**

- *Junos OS UTM Library for Security Devices*

## traceoptions (Security Web Filtering)

---

<b>Supported Platforms</b>	SRX Series
<b>Syntax</b>	traceoptions flag <i>flag</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering]
<b>Release Information</b>	Command introduced in Release 10.1 of Junos OS. Command introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.
<b>Description</b>	Define tracing operations for individual Web filtering modules. To specify more than one tracing operation, include multiple flag statements.
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>flag</b>:<ul style="list-style-type: none"><li>• <b>all</b>—Enable all Web filtering trace flags.</li><li>• <b>basic</b> —Trace basic information on the Web filtering module.</li><li>• <b>cache</b>—Enable Web filtering flags for the Web filtering cache maintained on the Web filtering module.</li><li>• <b>enhanced</b>—Enable Web filtering flags for processing through Enhanced Web Filtering.</li><li>• <b>heartbeat</b>—Trace connectivity information with Web filter server.</li><li>• <b>ipc</b>—Trace Web filtering IPC messages.</li><li>• <b>packet</b>—Trace packet information from session management.</li><li>• <b>profile</b>—Trace profile configuration information.</li><li>• <b>requests</b>—Trace requests sent to Web filter server.</li><li>• <b>response</b>—Trace response received from Web filter server.</li><li>• <b>session manager</b>—Trace session management information.</li><li>• <b>socket</b>—Trace the communication socket with Web filter server.</li><li>• <b>timer</b>—Trace aging information for requests sent to server.</li></ul></li></ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>

## type (Security Web Filtering)

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	type (juniper-enhanced   juniper-local   surf-control-integrated   websense-redirect);
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering]
<b>Release Information</b>	Command introduced in Release 9.5 of Junos OS. Command introduced in Release 11.4 of Junos OS for Enhanced Web Filtering.
<b>Description</b>	Define the type of Web filtering solution or URL filtering solution used by the device.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>juniper-enhanced</b>—Enable Enhanced Web Filtering on the device.</li> <li>• <b>juniper-local</b> —Enable Juniper Networks local URL filtering on the device.</li> <li>• <b>surf-control-integrated</b>—Enable integrated Web filtering on the device.</li> <li>• <b>websense-redirect</b>—Redirect the URL to the Websense server.</li> </ul>
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## url-blacklist

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	url-blacklist <i>listname</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	This is a global blacklist category, blocking content for Web filtering.
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS UTM Library for Security Devices</i></li> </ul>

## url-whitelist (Security Web Filtering)

---

<b>Supported Platforms</b>	<a href="#">SRX Series</a>
<b>Syntax</b>	url-whitelist <i>listname</i> ;
<b>Hierarchy Level</b>	[edit security utm feature-profile web-filtering]
<b>Description</b>	A URL whitelist is a unique custom list that you define in which all the URLs or IP addresses in that list for a specified category are always bypassed for filtering
<b>Options</b>	The remaining statements are explained separately. See <a href="#">CLI Explorer</a> .
<b>Required Privilege Level</b>	security—To view this statement in the configuration. security-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS UTM Library for Security Devices</i></li></ul>

## utm-policy

Supported Platforms [LN Series](#)

**Syntax**

```
utm-policy policy-name {
  anti-spam {
    smtp-profile profile-name;
  }
  anti-virus {
    ftp {
      download-profile profile-name;
      upload-profile profile-name;
    }
    http-profile profile-name;
    imap-profile profile-name;
    pop3-profile profile-name;
    smtp-profile profile-name;
  }
  content-filtering {
    ftp {
      download-profile profile-name;
      upload-profile profile-name;
    }
    http-profile profile-name;
    imap-profile profile-name;
    pop3-profile profile-name;
    smtp-profile profile-name;
  }
  traffic-options {
    sessions-per-client {
      limit value;
      over-limit (block | log-and-permit);
    }
  }
  web-filtering {
    http-profile profile-name;
  }
}
```

**Hierarchy Level** [edit security utm]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** Configure a UTM policy for antivirus, antispam, content-filtering, traffic-options, and web-filtering protocols and attach this policy to a security profile to implement it.

**Options** *policy-name*—Specify name of the UTM policy.

The remaining statements are explained separately. See [CLI Explorer](#).

**Required Privilege Level** security—To view this statement in the configuration.  
security-control—To add this statement to the configuration.

- Related Documentation**

## CHAPTER 21

# Administration

- [Monitoring Web Filtering on page 731](#)
- [Operational Commands on page 732](#)

## Monitoring Web Filtering

---

- [Displaying Global SurfControl URL categories on page 731](#)
- [Monitoring Web Filtering Configurations on page 731](#)

## Displaying Global SurfControl URL categories

**Supported Platforms** [SRX Series](#)

**Purpose** View global URL categories defined and maintained by SurfControl.

**Action** Enter the `user@host# show groups junos-defaults` CLI command. You can also look for `custom-url-category`.

**Related Documentation**

- [UTM Web Filtering Feature Guide for Security Devices](#)

## Monitoring Web Filtering Configurations

**Supported Platforms** [LN Series](#), [SRX Series](#)

**Purpose** View Web-filtering statistics.

**Action** To view Web-filtering statistics using the CLI, enter the following commands:

```
user@host> show security utm web-filtering status
user@host> show security utm web-filtering statistics
```

To view Web-filtering statistics using J-Web:

1. Select **Clear Web Filtering Statistics**.

The following information is displayed in the right pane.

Total Requests: #  
White List Hit: #  
Black List Hit: #  
Queries to Server: #  
Server Reply Permit: #  
Server Reply Block: #  
Custom Category Permit: #  
Custom Category Block: #  
Cache Hit Permit: #  
Cache Hit Block: #  
Web Filtering Session Total: #  
Web Filtering Session Inuse: #  
Fall Back: Log-and-Permit Block  
Default # #  
Timeout # #  
Server-Connectivity # #  
Too-Many-Requests # #

2. You can click the **Clear Web Filtering Statistics** button to clear all current viewable statistics and begin collecting new statistics.

## Operational Commands

- `clear security utm web-filtering statistics`
- `show security utm web-filtering statistics`
- `show security utm web-filtering status`
- `show security policies`
- `show groups junos-defaults`

---

## clear security utm web-filtering statistics

---

**Supported Platforms** [SRX Series](#)

**Syntax** clear security utm web-filtering statistics

**Release Information** Command introduced in Release 9.5 of Junos OS.  
Support for UTM in chassis cluster added in Release 11.4 of Junos OS.

**Description** Clear web filtering statistics information. With chassis cluster support for UTM, statistics from both the nodes is cleared.

**Required Privilege Level** clear

**Related Documentation**

- [show security utm web-filtering statistics on page 734](#)
- [show security utm web-filtering status on page 737](#)
- *Junos OS UTM Library for Security Devices*

**Output Fields** This command produces no output.

### Sample Output

clear security utm web-filtering statistics

```
user@host> clear security utm web-filtering statistics
```

## show security utm web-filtering statistics

---

**Supported Platforms** [SRX Series](#)

**Syntax** `show security utm web-filtering statistics <fpc <fpc-slot fpc-slot pic-slot pic-slot>>`

**Release Information** Command introduced in Junos OS Release 9.5.  
Support for UTM in chassis cluster added in Junos OS Release 11.4. Support for Flexible PIC Concentrator (FPC) and PIC statistics added in Junos OS Release 12.1X46-D10.

**Description** Display Web filtering statistics for connections including whitelist and blacklist hits and custom category hits. The aggregated statistics from all FPCs and PICs and statistics from both the nodes (with full chassis cluster support for UTM) are also displayed.

**Required Privilege Level** view

**Related Documentation**

## show security policies

---

### Supported Platforms

**Syntax** show security policies  
<detail>  
<none>  
policy-name *policy-name*  
<detail>  
<global>

**Release Information** Command modified in Junos OS Release 9.2. Support for IPv6 addresses added in Junos OS Release 10.2. Support for IPv6 addresses in active/active chassis cluster configurations in addition to the existing support of active/passive chassis cluster configurations added in Junos OS Release 10.4. Support for wildcard addresses added in Junos OS Release 11.1. Support for global policy added in Junos OS Release 11.4. Support for services offloading added in Junos OS Release 11.4. Support for source-identities added in Junos OS Release 12.1. The **Description** output field added in Junos OS Release 12.1. Support for negated address added in Junos OS Release 12.1X45-D10. The output fields for Policy Statistics expanded, and the output fields for the **global** and **policy-name** options expanded to include from-zone and to-zone global match criteria in Junos OS Release 12.1X47-D10.

**Description** Display a summary of all security policies configured on the device. If a particular policy is specified, display information particular to that policy.

- Options**
- **none**—Display basic information about all configured policies.
  - **detail**—(Optional) Display a detailed view of all of the policies configured on the device.
  - **policy-name *policy-name***—(Optional) Display information about the specified policy.
  - **global**—Display information about global policies.

**Required Privilege Level** view

**Output Fields** Table 7 on page 188 lists the output fields for the **show security policies** command. Output fields are listed in the approximate order in which they appear.

**Table 12: show security policies Output Fields**

Field Name	Field Description
<b>From zone</b>	Name of the source zone.
<b>To zone</b>	Name of the destination zone.
<b>Policy</b>	Name of the applicable policy.
<b>Description</b>	Description of the applicable policy.
<b>State</b>	Status of the policy: <ul style="list-style-type: none"> <li>• <b>enabled:</b> The policy can be used in the policy lookup process, which determines access rights for a packet and the action taken in regard to it.</li> <li>• <b>disabled:</b> The policy cannot be used in the policy lookup process, and therefore it is not available for access control.</li> </ul>
<b>Index</b>	Internal number associated with the policy.
<b>Sequence number</b>	Number of the policy within a given context. For example, three policies that are applicable in a from-zoneA-to-zoneB context might be ordered with sequence numbers 1, 2, 3. Also, in a from-zoneC-to-zoneD context, four policies might have sequence numbers 1, 2, 3, 4.
<b>Source addresses</b>	For standard display mode, the names of the source addresses for a policy. Address sets are resolved to their individual names.  For detail display mode, the names and corresponding IP addresses of the source addresses for a policy. Address sets are resolved to their individual address name-IP address pairs.
<b>Destination addresses</b>	Name of the destination address (or address set) as it was entered in the destination zone's address book. A packet's destination address must match this value for the policy to apply to it.
<b>Source addresses (excluded)</b>	Name of the source address excluded from the policy.
<b>Destination addresses (excluded)</b>	Name of the destination address excluded from the policy.
<b>Source identities</b>	One or more user roles specified for a policy.

Table 12: show security policies Output Fields (*continued*)

Field Name	Field Description
Applications	<p>Name of a preconfigured or custom application whose type the packet matches, as specified at configuration time.</p> <ul style="list-style-type: none"> <li>• <b>IP protocol</b>: The Internet protocol used by the application—for example, TCP, UDP, ICMP.</li> <li>• <b>ALG</b>: If an ALG is explicitly associated with the policy, the name of the ALG is displayed. If <b>application-protocol ignore</b> is configured, ignore is displayed. Otherwise, 0 is displayed. However, even if this command shows ALG: 0, ALGs might be triggered for packets destined to well-known ports on which ALGs are listening, unless ALGs are explicitly disabled or when <b>application-protocol ignore</b> is not configured for custom applications.</li> <li>• <b>Inactivity timeout</b>: Elapsed time without activity after which the application is terminated.</li> <li>• <b>Source port range</b>: The low-high source port range for the session application.</li> </ul>
Destination Address Translation	<p>Status of the destination address translation traffic:</p> <ul style="list-style-type: none"> <li>• <b>drop translated</b>—Drop the packets with translated destination addresses.</li> <li>• <b>drop untranslated</b>—Drop the packets without translated destination addresses.</li> </ul>
Application Firewall	<p>An application firewall includes the following:</p> <ul style="list-style-type: none"> <li>• <b>Rule-set</b>—Name of the rule set.</li> <li>• <b>Rule</b>—Name of the rule. <ul style="list-style-type: none"> <li>• <b>Dynamic applications</b>—Name of the applications.</li> <li>• <b>Dynamic application groups</b>—Name of the application groups.</li> <li>• <b>Action</b>—The action taken with respect to a packet that matches the application firewall rule set. Actions include the following: <ul style="list-style-type: none"> <li>• <b>permit</b></li> <li>• <b>deny</b></li> </ul> </li> </ul> </li> <li>• <b>Default rule</b>—The default rule applied when the identified application is not specified in any rules of the rule set.</li> </ul>
Action or Action-type	<ul style="list-style-type: none"> <li>• The action taken in regard to a packet that matches the policy's tuples. Actions include the following: <ul style="list-style-type: none"> <li>• <b>permit</b></li> <li>• <b>firewall-authentication</b></li> <li>• <b>tunnel ipsec-vpn</b> <i>vpn-name</i></li> <li>• <b>pair-policy</b> <i>pair-policy-name</i></li> <li>• <b>source-nat pool</b> <i>pool-name</i></li> <li>• <b>pool-set</b> <i>pool-set-name</i></li> <li>• <b>interface</b></li> <li>• <b>destination-nat</b> <i>name</i></li> <li>• <b>deny</b></li> <li>• <b>reject</b></li> <li>• <b>services-offload</b></li> </ul> </li> </ul>
Session log	<p>Session log entry that indicates whether the <b>at-create</b> and <b>at-close</b> flags were set at configuration time to log session information.</p>

Table 12: show security policies Output Fields (*continued*)

Field Name	Field Description
<b>Scheduler name</b>	Name of a preconfigured scheduler whose schedule determines when the policy is active and can be used as a possible match for traffic.
<b>Policy statistics</b>	<ul style="list-style-type: none"> <li>• <b>Input bytes</b>—The total number of bytes presented for processing by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of bytes presented for processing by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of bytes presented for processing by the device from the reply direction.</li> </ul> </li> <li>• <b>Output bytes</b>—The total number of bytes actually processed by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of bytes from the initial direction actually processed by the device.</li> <li>• <b>Reply direction</b>—The number of bytes from the reply direction actually processed by the device.</li> </ul> </li> <li>• <b>Input packets</b>—The total number of packets presented for processing by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of packets presented for processing by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of packets presented for processing by the device from the reply direction.</li> </ul> </li> <li>• <b>Output packets</b>—The total number of packets actually processed by the device. <ul style="list-style-type: none"> <li>• <b>Initial direction</b>—The number of packets actually processed by the device from the initial direction.</li> <li>• <b>Reply direction</b>—The number of packets actually processed by the device from the reply direction.</li> </ul> </li> <li>• <b>Session rate</b>—The total number of active and deleted sessions.</li> <li>• <b>Active sessions</b>—The number of sessions currently present because of access control lookups that used this policy.</li> <li>• <b>Session deletions</b>—The number of sessions deleted since system startup.</li> <li>• <b>Policy lookups</b>—The number of times the policy was accessed to check for a match.</li> </ul> <p><b>NOTE:</b> Configure the Policy P1 with the <b>count</b> option to display policy statistics.</p>

## show groups junos-defaults

---

**Supported Platforms** [EX Series](#), [LN Series](#), [M Series](#), [MX Series](#), [PTX Series](#), [T Series](#)

**Syntax** show groups junos-defaults

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display the full set of available preset statements from the Junos OS defaults group.

```
user@host# show groups junos-defaults
groups {
  junos-defaults {
    applications {
      # File Transfer Protocol
      application junos-ftp {
        application-protocol ftp;
        protocol tcp;
        destination-port 21;
      }
      # Trivial File Transfer Protocol
      application junos-tftp {
        application-protocol tftp;
        protocol udp;
        destination-port 69;
      }
      # RPC port mapper on TCP
      application junos-rpc-portmap-tcp {
        application-protocol rpc-portmap;
        protocol tcp;
        destination-port 111;
      }
      # RPC port mapper on UDP
    }
  }
}
```
