Syntax from {
 match-conditions;
 }

Hierarchy Level [edit firewall family *family-name* filter *filter-name* term *term-name*]

Release Information Statement introduced in JUNOS Release 9.0 for EX-series switches.

Description Match packet fields to values specified in a match condition. If the **from** statement is not included in a firewall filter configuration, all packets are considered to match and the actions and action modifiers in the **then** statement are taken.

Options *match-conditions* —Conditions that define the values or fields that the incoming or outgoing packets must contain for a match. You can specify one or more match conditions. If you specify more than one, they all must match for a match to occur and for the action in the **then** statement to be taken.

Required Privilege Level firewall—To view this statement in the configuration.
 firewall-control—To add this statement to the configuration.
