

## vlan-tagging

---

**Syntax**    vlan-tagging;

**Hierarchy Level**    [edit dynamic-profiles *profile-name* interfaces *interface-name*],  
[edit interfaces *interface-name*]

**Release Information**    Statement introduced before JUNOS Release 7.4.  
The [edit dynamic-profiles *profile-name* interfaces *interface-name*] hierarchy added in JUNOS Release 9.2.

**Description**    For Fast Ethernet and Gigabit Ethernet interfaces and aggregated Ethernet interfaces configured for VPLS, enable the reception and transmission of 802.1Q VLAN-tagged frames on the interface.

**NOTE:** For Ethernet, Fast Ethernet, Tri-Rate Ethernet copper, Gigabit Ethernet, 10-Gigabit Ethernet, and aggregated Ethernet interfaces supporting VPLS, the JUNOS software supports a subset of the IEEE 802.1Q standard for channelizing an Ethernet interface into multiple logical interfaces, allowing many hosts to be connected to the same Gigabit Ethernet switch, but preventing them from being in the same routing or bridging domain.

---

**Required Privilege Level**    interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.
