

Group-Specific DHCP Local Server Options

You can include the following statements at both the `[edit system services dhcp-local-server group group-name]` hierarchy level to set group-specific DHCP local server configuration options, and at the `[edit system services dhcp-local-server]` hierarchy level to set global DHCP local server configuration options:

- authentication—Configure the parameters the router sends to the external AAA server.
- dynamic-profile—Specify the dynamic profile that is attached to a group of interfaces.
- interface—Specify one or more interfaces, or a range of interfaces, that are within the specified group.
- overrides—Override the default configuration settings for the extended DHCP local server. For information, see [Overriding Default DHCP Local Server Configuration Settings](#).

The statements configured at the `[edit system services dhcp-local-server group group-name]` hierarchy level apply only to the named group of interfaces, and override any global DHCP local server settings configured with the same statements at the `[edit system services dhcp-local-server]` hierarchy level.
