

## option

---

**Syntax**     option {  
              [ (*id-number option-type option-value*)  
              (*id-number array option-type option-value*) ];  
              }

**Hierarchy Level**     [edit access address-assignment pool *pool-name* family inet dhcp-attributes]

**Release Information**     Statement introduced in JUNOS Release 9.0.

**Description**     Specify user-defined options that are added to client packets.

**Options**     *id-number*—Any whole number. The ID number is used to index the option and must be unique across a DHCP server.

*option-type*—Any of the following types: **flag**, **byte**, **string**, **short**, **unsigned-short**, **integer**, **unsigned-integer**, or **ip-address**.

**array**—An option can include an array of values.

*option-value*—Value associated with an option. The option value must be compatible with the option type (for example, an On or Off value for a flag type).

**Required Privilege Level**     admin—To view this statement in the configuration.  
                                  admin-control—To add this statement to the configuration.
