

option-match

Syntax option-match {
 option-82 {
 circuit-id *value* range *named-range*;
 remote-id *value* range *named-range*;
 }
 }

Hierarchy Level [edit access address-assignment pool *pool-name* family inet dhcp-attributes]

Release Information Statement introduced in JUNOS Release 9.0.

Description Specify a list of match criteria used to determine which named address range in the address-assignment pool to use. The extended DHCP local server matches this information to the match criteria specified in the client PDUs. For example, for option 82 match criteria, the server matches the option 82 value in the user PDU to the specified option 82 string and uses the named range associated with the string.

The remaining statements are explained separately.
