

remote-loopback-respond

Syntax	remote-loopback-respond;
Hierarchy Level	[edit interface <i>ct1-fpc/pic/port</i>], [edit interfaces <i>interface-name</i> t1-options]
Release Information	Statement introduced before JUNOS Release 7.4.
Description	For T1 interfaces only, configure the routing platform to respond to remote loopback requests. Remote loopback requests can be from the facilities data link or inband.
	NOTE: When configuring CT1 interfaces on the 10-port Channelized E1/T1 IQE PIC, remote-loopback-respond must be set at the [edit interface <i>ct1-fpc/pic/port</i>] hierarchy level.
Default	The routing platform does not respond to remote loop requests.
Usage Guidelines	See Configuring the T1 Remote Loopback Response.
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
