

Configuring Dynamic Home Assignment for the Mobile Node

The mobile node can request that the home agent dynamically assign an IP address for the home agent. The mobile node uses this address for the home agent in all subsequent registration requests until the registration expires or the mobile node is rebooted.

To configure the IP address to be used by the mobile node for the home agent:

- Configure the IP address for the specified mobile node.

```
[edit services mobile-ip]
```

```
user@host# set dynamic-home-assignment home-agent nai bws@example.com  
home-agent 192.168.4.5
```
