

## access-internal

---

**Syntax**    `access-internal {  
              route subscriber-ip-address {  
                  qualified-next-hop underlying-interface {  
                      mac-address address;  
                  }  
              }  
          }`

**Hierarchy Level**    [edit dynamic-profiles routing-options]

**Release Information**    Statement introduced in JUNOS Release 9.5.

**Description**    Dynamically configure access-internal routes. Access-internal routes are optional, but are used instead of access routes if the next-hop address is not specified in the Framed-Route Attribute [22].

**Options**    The remaining statements are explained separately.

**Required Privilege Level**    routing—To view this statement in the configuration.  
                                  routing-control—To add this statement to the configuration.
