

## authentication-order

---

**Syntax** authentication-order [ *authentication-methods* ];

**Hierarchy Level** [edit access profile *profile-name*]

**Release Information** Statement introduced before JUNOS Release 7.4.

**Description** Set the order in which the JUNOS Software tries different authentication methods when verifying that a client can access the router. For each login attempt, the software tries the authentication methods in order, from first to last.

**Options** radius—Verify the client using RADIUS authentication services.

password—Verify the client using the information configured at the [edit access profile *profile-name* client *client-name*] hierarchy level.

**NOTE:** The password keyword is not supported by the subscriber access management feature.

---

**Required Privilege Level** admin—To view this statement in the configuration.  
admin-control—To add this statement to the configuration.
