

## option-82

---

**Syntax** option-82;

**Hierarchy Level** [edit logical-systems *logical-system-name* routing-instances *routing-instance-name* system services dhcp-local-server pool-match-order],  
[edit logical-systems *logical-system-name* system services dhcp-local-server pool-match-order],  
[edit routing-instances *routing-instance-name* system services dhcp-local-server pool-match-order],  
[edit system services dhcp-local-server pool-match-order]

**Release Information** Statement introduced in JUNOS Release 9.0.

**Description** Configure the extended DHCP local server to use the option 82 value in the DHCP client DHCP PDU together with the ip-address-first method to determine which address-assignment pool to use. You must configure the **ip-address-first** statement before configuring the **option-82** statement. The DHCP local server first determines which address-assignment pool to use based on the ip-address-first method. Then, the local server matches the option 82 value in the client PDU with the option 82 configuration in the address-assignment pool.

**Required Privilege Level** system—To view this statement in the configuration.  
system-control—To add this statement to the configuration.
