

radius

Syntax radius {
 accounting-server [server-addresses];
 authentication-server [server-addresses];
 }

Hierarchy Level [edit access profile *profile-name*]

Release Information Statement introduced in JUNOS Release 9.0 for EX Series switches.

Description Configure the Remote Authentication Dial-In User Service (RADIUS) servers for authentication and for accounting. To configure multiple RADIUS servers, include multiple **radius** statements. The servers are tried in order and in a round-robin fashion until a valid response is received from one of the servers or until all the configured retry limits are reached.

The statements are explained separately.

Required Privilege Level admin—To view this statement in the configuration.
 admin-control—To add this statement to the configuration.
