

Configuring a Subscriber Interface with a Static VLAN Interface

This topic describes how to configure a subscriber interface with a static VLAN interface.

After you configure the static VLAN interface, you can reference it in a dynamic profile.

To configure a subscriber interface over a VLAN:

1. Configure the static VLAN interface and enable VLAN tagging.

```
[edit interfaces]
ge-5/0/0 {
  vlan-tagging;
}
```

2. Configure the units and assign the VLAN IDs.

```
unit 1 {
  proxy-arp;
  vlan-id 1;
  family inet {
    unnumbered-address lo0.0 preferred-source-address 192.1.1.1;
  }
}
unit 2 {
  proxy-arp;
  vlan-id 2;
  family inet {
    unnumbered-address lo0.0 preferred-source-address 192.1.1.1;
  }
}
```
