CHAPTER 57

Operational Response Tag Elements Common to M, MX, T Series, and SRX Series

This chapter lists the Extensible Markup Language (XML) tag elements in the Junos XML application programming interface (API) that contain operational information. The Junos XML protocol and NETCONF servers return them in response to requests from client applications.

The tags listed in this chapter are common to devices belonging to the following platforms:

- M Series
- MX Series
- T Series
- SRX Series

The tags are divided into the following sections and listed in alphabetical order within each section.

- Summary of Connectivity Fault Management Response Tags on page 7159

CHAPTER 58

Operational Response Tag Elements Common to EX Series, QFX Series, and SRX Series

This chapter lists the Extensible Markup Language (XML) tag elements in the Junos XML application programming interface (API) that contain operational information. The Junos XML protocol and NETCONF servers return them in response to requests from client applications.

The tags listed in this chapter are common to devices belonging to the following platforms:

- EX Series
- QFX Series
- SRX Series

The tags are divided into the following sections and listed in alphabetical order within each section.

- Summary of Autoinstallation Response Tags on page 7405
- Summary of DHCP Response Tags on page 7407
- Summary of IGMP Snooping Response Tags on page 7422
- Summary of LLDP Response Tags on page 7503

Summary of Autoinstallation Response Tags

<autoinstallation-status-information>

Usage

```
<autoinstallation-status-information>
  <master-state>
    master-state
  </master-state>
  <last-configuration-filename>
    last-configuration-filename
  </last-configuration-filename>
  <last-configuration-server>
    last-configuration-server
  </last-configuration-server>
```

Copyright © 2016, Juniper Networks, Inc.

```
<autoinstallation-status-interface-information>.....</autoinstallation-status-interface-information>

</autoinstallation-status-information>
```

Description Autoinstallation status

<autoinstallation-status-interface-address-information>

Usage

```
<autoinstallation-status-information>
 <autoinstallation-status-interface-information>
  <autoinstallation-status-interface-address-information>
   <protocol-name>
    protocol-name
   </protocol-name>
   <protocol-address>
    protocol-address
   </protocol-address>
  </autoinstallation-status-interface-address-information>
 </autoinstallation-status-interface-information>
</autoinstallation-status-information>
```

Description Autoinstallation status for address acquisition protocols on a particular interface

<autoinstallation-status-interface-information>

Usage

```
<autoinstallation-status-information>
 <autoinstallation-status-interface-information>
  <interface-name>
   interface-name
  </interface-name>
  <interface-state>
   interface-state
  </interface-state>
  <interface-acquired-address>
   interface-acquired-address
  </interface-acquired-address>
  <interface-acquired-hostname>
   interface-acquired-hostname
  </interface-acquired-hostname>
  <interface-acquired-hostname-source>
   interface-acquired-hostname-source
  </interface-acquired-hostname-source>
  <interface-acquired-configuration-filename>
   interface-acquired-configuration-filename
  </interface-acquired-configuration-filename>
  <interface-acquired-configuration-server>
   interface-acquired-configuration-server
  </interface-acquired-configuration-server>
```

Copyright © 2016, Juniper Networks, Inc.

```
<autoinstallation-status-interface-address-information>…</autoinstallation-status-interface-address-information>

</autoinstallation-status-interface-information>
    </autoinstallation-status-information>
```

Description Autoinstallation status for a particular interface

Summary of DHCP Response Tags

<client-identifier>

Usage

```
<dhcp-binding-information>
  <dhcp-binding>
    <client-identifier>
      <hex-data>
        hex-data
      </hex-data>
      <hex-data-line>
        hex-data-line
      </hex-data-line>
      <printable-data-line>
        printable-data-line
      </printable-data-line>
    </client-identifier>
  </dhcp-binding>
</dhcp-binding-information>
```

Description Identifier that the DHCP client provided for itself when it requested an address assignment

<dhcp-binding>

Usage

```
<dhcp-binding-information>
  <dhcp-binding>
    <allocated-address>
      allocated-address
    </allocated-address>
    <mac-address>
      mac-address
    </mac-address>
    <dhcp-lease-binding-type>
      dhcp-lease-binding-type
    </dhcp-lease-binding-type>
    <lease-end-time>
      lease-end-time
    </lease-end-time>
    <lease-state>
      lease-state
    </lease-state>
```

Copyright © 2016, Juniper Networks, Inc.

```
    <dhcp-option-table>....</dhcp-option-table>
    <address-pool-name>
      address-pool-name
    </address-pool-name>
    <interface-name>
      interface-name
    </interface-name>
    <bootp-relay-address>
      bootp-relay-address
    </bootp-relay-address>
    <dhcp-lease-information>....</dhcp-lease-information>
    <client-identifier>....</client-identifier>
  </dhcp-binding>
</dhcp-binding-information>
```

Description Information about the address assigned to a Dynamic Host Configuration Protocol client

<dhcp-binding-information>

Usage

```
<dhcp-binding-information>
  <dhcp-binding>....</dhcp-binding>
</dhcp-binding-information>
```

Description Information about the address assigned to each of one or more Dynamic Host Configuration Protocol clients

<dhcp-client>

Usage

```
<dhcp-client-information>
  <dhcp-client>
    <logical-interface>
      logical-interface
    </logical-interface>
    <mac-address>
      mac-address
    </mac-address>
    <client-status>
      client-status
    </client-status>
    <vendor-identifier>
      vendor-identifier
    </vendor-identifier>
    <server-address>
      server-address
    </server-address>
    <address-obtained>
      address-obtained
    </address-obtained>
    <update-server>
      update-server
```

Copyright © 2016, Juniper Networks, Inc.

```
    </update-server>
    <lease-obtained>
     lease-obtained
    </lease-obtained>
    <lease-expires>
     lease-expires
    </lease-expires>
    <dhcp-option-table>....</dhcp-option-table>
   </dhcp-client>
</dhcp-client-information>
```

Description Information about a DHCP client

<dhcp-client-information>

Usage

```
<dhcp-client-information>
  <dhcp-client>....</dhcp-client>
</dhcp-client-information>
```

Description Information about one or more Dynamic Host Configuration Protocol clients

<dhcp-client-statistics-information>

Usage

```
<dhcp-client-statistics-information>
  <dropped-client-packet-total>
   dropped-client-packet-total
  </dropped-client-packet-total>
  <dropped-client-packet-invalid-server-address>
   dropped-client-packet-invalid-server-address
  </dropped-client-packet-invalid-server-address>
  <dropped-client-packet-too-short>
   dropped-client-packet-too-short
  </dropped-client-packet-too-short>
  <dropped-client-packet-read-error>
   dropped-client-packet-read-error
  </dropped-client-packet-read-error>
  <dropped-client-packet-send-error>
   dropped-client-packet-send-error
  </dropped-client-packet-send-error>
  <message-client-table>....</message-client-table>
</dhcp-client-statistics-information>
```

Description Statistics from the Dynamic Host Configuration Protocol client

<dhcp-conflict>

Usage

```
<dhcp-conflict>
  <detection-time>
```

Copyright © 2016, Juniper Networks, Inc.

```
    detection-time
   </detection-time>
   <detection-method>
    detection-method
   </detection-method>
   <conflict-address>
    conflict-address
   </conflict-address>
</dhcp-conflict>
```

Description Information about a Dynamic Host Configuration Protocol conflict. A conflict arises when an address assigned to DHCP client is already assigned to another entity (computer or interface, for example).

<dhcp-conflict>

Usage

```
<dhcp-conflict-information>
  <dhcp-conflict>
    <detection-time>
      detection-time
    </detection-time>
    <detection-method>
      detection-method
    </detection-method>
    <conflict-address>
      conflict-address
    </conflict-address>
  </dhcp-conflict>
</dhcp-conflict-information>
```

Description Information about a Dynamic Host Configuration Protocol conflict. A conflict arises when an address assigned to DHCP client is already assigned to another entity (computer or interface, for example).

<dhcp-conflict-information>

Usage

```
<dhcp-conflict-information>
  <dhcp-conflict>....</dhcp-conflict>
</dhcp-conflict-information>
```

Description Information about one or more Dynamic Host Configuration Protocol conflicts.

<dhcp-global-information>

Usage

```
<dhcp-global-information>
  <dhcp-lease-time-information>....</dhcp-lease-time-information>
  <dhcp-option-table>....</dhcp-option-table>
```

Copyright © 2016, Juniper Networks, Inc.

```
<bootp-lease-length>
  bootp-lease-length
</bootp-lease-length>
<bootp-lease-cutoff>
  bootp-lease-cutoff
</bootp-lease-cutoff>
</dhcp-global-information>
```

Description Information about Dynamic Host Configuration Protocol settings that are configured for the global scope

<dhcp-helper-statistics>

Usage

```
<dhcp-helper-statistics>
<helper-statistics-service-information>....</helper-statistics-service-information>

</dhcp-helper-statistics>
```

Description Port forwarding helper statistics

<dhcp-lease-information>

Usage

```
<dhcp-lease-information>
  <dhcp-lease-type>
    dhcp-lease-type
  </dhcp-lease-type>
  <lease-start-time>
    lease-start-time
  </lease-start-time>
  <lease-end-time>
    lease-end-time
  </lease-end-time>
  <lease-state>
    lease-state
  </lease-state>
</dhcp-lease-information>
```

Description Information about an address assignment

<dhcp-lease-information>

Usage

```
<dhcp-binding-information>
  <dhcp-binding>
    <dhcp-lease-information>
      <dhcp-lease-type>
        dhcp-lease-type
      </dhcp-lease-type>
      <lease-start-time>
```

```
        lease-start-time
       </lease-start-time>
       <lease-end-time>
        lease-end-time
       </lease-end-time>
       <lease-state>
        lease-state
       </lease-state>
      </dhcp-lease-information>
     </dhcp-binding>
    </dhcp-binding-information>
```

Description Information about an address assignment

<dhcp-lease-time-information>

Usage

```
<dhcp-lease-time-information>
 <default-lease-time>
  default-lease-time
 </default-lease-time>
 <minimum-lease-time>
  minimum-lease-time
 </minimum-lease-time>
 <maximum-lease-time>
  maximum-lease-time
 </maximum-lease-time>
</dhcp-lease-time-information>
```

Description Information about configured default, maximum, and minimum duration for address assignments

<dhcp-lease-time-information>

Usage

```
<dhcp-pool-information>
 <dhcp-pool>
  <dhcp-lease-time-information>
   <default-lease-time>
    default-lease-time
   </default-lease-time>
   <minimum-lease-time>
    minimum-lease-time
   </minimum-lease-time>
   <maximum-lease-time>
    maximum-lease-time
   </maximum-lease-time>
  </dhcp-lease-time-information>
 </dhcp-pool>
</dhcp-pool-information>
```

Copyright © 2016, Juniper Networks, Inc.

Description Information about configured default, maximum, and minimum duration for address assignments

<dhcp-lease-time-information>

Usage

```
<dhcp-global-information>
  <dhcp-lease-time-information>
    <default-lease-time>
      default-lease-time
    </default-lease-time>
    <minimum-lease-time>
      minimum-lease-time
    </minimum-lease-time>
    <maximum-lease-time>
      maximum-lease-time
    </maximum-lease-time>
  </dhcp-lease-time-information>
</dhcp-global-information>
```

Description Information about configured default, maximum, and minimum duration for address assignments

<dhcp-option>

Usage

```
<dhcp-option>

CHAPTER 59

Operational Response Tag Elements Specific to SRX Series

This chapter lists the Extensible Markup Language (XML) tag elements in the Junos XML application programming interface (API) that contain operational information. The Junos XML protocol and NETCONF servers return them in response to requests from client applications.

The tags listed in this chapter are specific to devices belonging to the following platforms:

- SRX Series

The tags are divided into the following sections and listed in alphabetical order within each section.

- Summary of Autorecovery Response Tags on page 7566
- Summary of Download Manager Response Tags on page 7569
- Summary of Allowed System Services and Protocols Response Tags on page 7572
- Summary of ALG Response Tags on page 7577
- Summary of AVT Response Tags on page 7598
- Summary of Data Link Switching Response Tags on page 7598
- Summary of 802.1X Process Response Tags on page 7637
- Summary of DS-Lite Response Tags on page 7662
- Summary of Dynamic VPN Response Tags on page 7664
- Summary of End-to-End Debug Response Tags on page 7668
- Summary of ESW Response Tags on page 7670
- Summary of sFlow Response Tags on page 7797
- Summary of Firwall Authentication Response Tags on page 7812
- Summary of GPRS Tunneling Protocol Response Tags on page 7818
- Summary of IDS Response Tags on page 7835
- Summary of IPSec Response Tags on page 7839
- Summary of ISDN Response Tags on page 7952
- Summary of Stateful Redundancy Response Tags on page 7962

Copyright © 2016, Juniper Networks, Inc.

- Summary of Logical Systems Response Tags on page 7999
- Summary of DNS Proxy Response Response Tags on page 7999
- Summary of NAT Response Tags on page 8002
- Summary of Junos OS Reports Response Tags on page 8026
- Summary of Resource Manager Response Tags on page 8035
- Summary of VLAN Retag Response Tags on page 8039
- Summary of Real Time Media Convergence Response Tags on page 8041
- Summary of Scheduler Response Tags on page 8043
- Summary of SCTP Response Tags on page 8044
- Summary of Security Firewall Response Tags on page 8046
- Summary of Security Policy Response Tags on page 8051
- Summary of Security Profile Response Tags on page 8158
- Summary of SMTP Response Tags on page 8185
- Summary of SPU Monitoring Response Tags on page 8187
- Summary of SPU Performance Response Tags on page 8190
- Summary of Telephony Gateway Module Response Tags on page 8192
- Summary of Unified Access Control Response Tags on page 8196
- Summary of Local Authentication Response Tags on page 8201
- Summary of Antispam Statistics Response Tags on page 8202
- Summary of Wireless LAN Access Points Response Tags on page 8236
- Summary of GSM Response Tags on page 8269
- Summary of WXOS Protocol Response Tags on page 8278
- Summary of Zones Response Tags on page 8279

Summary of Autorecovery Response Tags

<autorecovery>

Usage

Description Control link server information

<control-link-server-information>

Usage

```
<chassis-cluster-information>
  <control-link-information>
    <control-link-server-information>
      <server-status>
        server-status
      </server-status>
      <server-connections>
        server-connections
      </server-connections>
    </control-link-server-information>
  </control-link-information>
</chassis-cluster-information>
```

Description Control link server information

<control-link-vlan-information>

Usage

```
<chassis-cluster-information>
  <control-link-vlan-information>
    <control-link-vlan-status>
      control-link-vlan-status
    </control-link-vlan-status>
  </control-link-vlan-information>
</chassis-cluster-information>
```

Description Control port traffic tagging with vlan(4094) enabled or disabled

<dataplane-interfaces>

Usage

```
<chassis-cluster-interface-statistics>
  <dataplane-interfaces>
    <fabric-information>....</fabric-information>
  </dataplane-interfaces>
</chassis-cluster-interface-statistics>
```

Description

<fabric-child>

Usage

```
<chassis-cluster-statistics>
  <chassis-cluster-interfaces>
    <chassis-cluster-fabric>

CHAPTER 60

DTD for Accounting Response Tags Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called junos-accounting.dtd. To review reference pages for the tags, see:

- Operational Response Tag Elements Applicable to All Platforms on page 2181
- Operational Response Tag Elements Common to M, MX, T Series, and SRX Series on page 7159
- Operational Response Tag Elements Common to EX Series, QFX Series, and SRX Series on page 7405
- Operational Response Tag Elements Specific to SRX Series on page 7565

CHAPTER 61

DTD for Adaptive Services Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called junos-adaptive-services.dtd.To review reference pages for the tags, see:

- Operational Response Tag Elements Applicable to All Platforms on page 2181
- Operational Response Tag Elements Common to M, MX, T Series, and SRX Series on page 7159
- Operational Response Tag Elements Common to EX Series, QFX Series, and SRX Series on page 7405
- Operational Response Tag Elements Specific to SRX Series on page 7565

```
