

## vlan service-profile

---

**Syntax** [ no ] vlan service-profile *profileName*

**Release Information** Command introduced in JUNOS Release 7.1.0.

**Description** Assigns an IP service profile to a VLAN subinterface. The service profile must be defined in the default virtual router. The **no** version removes the IP service profile from the VLAN subinterface.

**Options** ■ *profileName*—Name of the IP service profile

**Mode** Profile Configuration
