

Monitoring the Configuration of QoS Interface Sets

Purpose Display information about configured interface sets.

Action To display information about a specific interface set:

```
host1#show qos-interface-set vlan-set
interface      member member restricted
set    parent  port    type  count  interface
-----
vlan-set  vlan-ss lag test1 vlan    2      none
```

To display detailed information about a specific interface set:

```
host1#show qos-interface-set vlan-set detail
interface      member member restricted
set    parent  port    type  count  interface
-----
vlan-set  vlan-ss lag test1  vlan    2      none
```

```
Children:
  vlan lag test1.1      vlan lag test1.4
```

Meaning Table 1 on page 1 lists the **show qos-interface-set** command output fields.

Table 1: show qos-interface-set Output Fields

| Field Name | Field Description |
|----------------------|---|
| interface set | Name of the interface set |
| parent | Name of the interface superset that is the parent of the interface set |
| port | Interface that is the parent of the interface superset |
| member type | Member-interface type defined for the interface set: <ul style="list-style-type: none">■ vlan■ ip■ vlan |
| restricted interface | Restricted interface configured for this interface set |
| Children | List of interface members associated with the interface superset |
