

service check-config

Syntax [no] service check-config [auto | fileName *fileName* | running-configuration]

Release Information Command introduced in JUNOS Release 9.3.0.

Description Detects corruption of running configuration and CNF files on both the primary and the standby SRP when it is due to a fatal duplicate key error. The **no** version restores the default action, manual detection.

- Options**
- auto—Checks the running configuration at regular intervals; cannot be used for CNF files
 - *fileName*—One of the following actions for the empty service name tag:
 - running-configuration—Specifies that the running configuration needs to be validated for corruption

Mode Global Configuration
