

## gre-tunnel policy

---

**Syntax** gre-tunnel policy { input | output } *policyName*  
[ statistics { enabled | disabled | preserve } | merge ]  
  
no gre-tunnel policy { input | output } [ *policyName* ]

**Release Information** Command introduced before JUNOS Release 7.1.0.  
**merge** keyword added in JUNOS Release 7.2.0.

**Description** Assigns a GRE tunnel policy list to an interface. If you enter the **gre-tunnel policy** command and the policy list does not exist, the router creates a policy list with no rules, the default. Attaching this policy list to an interface filters all packets on that interface. You must specify the **input** or **output** keyword to assign the policy list to the ingress or egress of the interface. The **no** version removes the association between a policy list and an interface.

- Options**
- input—Applies policy to data arriving at this interface
  - output—Applies policy to data leaving this interface
  - *policyName*—Name of the policy; a maximum of 40 characters
  - statistics—Enables or disables collection of policy routing statistics
    - enabled—Enables collection of policy routing statistics
    - disabled—Disables collection of policy routing statistics
    - preserve—Preserves existing statistics for any classifier-list that is the same for both the new and old policy attachments when you attach a new policy to an interface
  - merge—Enables merging of multiple policies to form a single policy

**Mode** Interface Configuration
