

set ip source-prefix

Syntax [no] set ip source-prefix *ipAddress ipMask* { deny | primary }

Release Information Command introduced before JUNOS Release 7.1.0.

Description Specifies a source address range that will be inserted into a specific interface and the action to take with the range. The **no** version removes the source address range from the route map.

- Options**
- *ipAddress*—IP address for the range
 - *ipMask*—IP address mask for the range
 - deny—Drops the addresses that appear in the source address range
 - primary—Associates the source prefix with the primary IP interface
