

exception http-redirect

Syntax [no] exception http-redirect

Release Information Command introduced in JUNOS Release 7.2.0.

Description Creates the exception rule within an IPv4 or IPv6 policy classifier group so the application can perform an application-dependent action on the content of the packet. HTTP redirect is the only application that is available as a destination of the exception rule. The **no** version removes the exception rule.

NOTE: This command is not supported for the ES2 10G Uplink LM and ES2 10G ADV LM.
