

## router-name

---

**Syntax**    router-name *vrName*

no router-name [ *vrName* ]

**Release Information**    Command introduced before JUNOS Release 7.1.0.

**Description**    Maps a virtual router to a user domain name. The **no** version deletes the router name parameter, and the router defaults to the default virtual router.

**NOTE:** This command is deprecated and might be removed completely in a future release. The functionality provided by this command has been replaced by the **auth-router-name** and **ip-router-name** commands.

---

**Options**    ■    *vrName*—Name of the virtual router to map to the user domain name

**Mode**    Domain Map Configuration, Tunnel Group Tunnel Configuration
