

set dhcp relay proxy send-first-offer

Syntax [no] set dhcp relay proxy send-first-offer

Release Information Command introduced in JUNOS Release 8.0.0.

Description Configures the DHCP relay proxy to immediately send the first DHCP offer it receives from any DHCP server to the DHCP client. The **no** version restores the default value, in which DHCP relay proxy sends the single most appropriate address offer it receives from multiple DHCP servers.

Mode Global Configuration
