

## vlan classifier-list

---

**Syntax**    `vlan classifier-list classifierName`  
              `[ traffic-class className ] [ color { green | yellow | red } ]`  
              `[ user-packet-class userPacketClassValue ] [ user-priority userPriorityValue ]`  
  
              `no vlan classifier-list classifierName [ classifierNumber ]`

**Release Information**    Command introduced before JUNOS Release 7.1.0.

**Description**    Creates or modifies a VLAN classifier control list. The **no** version deletes the classifier control list.

- Options**
- *classifierName*—Name of a classifier list entry
  - *className*—Name of a traffic class; the router supports up to eight traffic classes
  - green—Matches packet color to green, indicating a low drop preference
  - yellow—Matches packet color to yellow, indicating a medium drop preference
  - red—Matches packet color to red, indicating a high drop preference
  - *userPacketClassValue*—Value of the user packet class in the range 0–15
  - *userPriorityValue*—Value of the user priority bits in the range 0–7
  - *classifierNumber*—Index of the classifier control list entry to be deleted; an integer in the range 1–10000

**Mode**    Global Configuration
