

## mpls policy

---

**Syntax** `mpls policy { input | output } policyName`  
`[ statistics { enabled [ baseline { enabled | disabled } ] [ preserve | merge ] |`  
`disabled [ merge ] } | merge ]`  
  
`no mpls policy { input | output } [ policyName ]`

**Release Information** Command introduced before JUNOS Release 7.1.0.  
**merge** keyword added in JUNOS Release 7.2.0.

**Description** Assigns a policy list to the ingress or egress of an MPLS layer 2 transport interface. If you enter this command when the policy list does not exist, the router will create a policy list with a filter rule as the default. Attaching this policy list to an interface filters all packets on that interface. You must specify the **input** or **output** keyword to assign the policy list to the ingress or egress of the interface. The **no** version removes the association between a policy list and an interface.

- Options**
- **input**—Applies policy to data arriving at this interface
  - **output**—Applies policy to data leaving this interface
  - ***policyName***—Name of the policy; a maximum of 40 characters
  - **statistics**—Enables or disables collection of policy routing statistics
    - **enabled**—Enables collection of policy routing statistics
    - **baseline enabled**—Enables baselining of policy routing statistics
    - **baseline disabled**—Disables baselining of policy routing statistics
    - **preserve**—Preserves existing statistics for any classifier-list that is the same for both the new and old policy attachments when you attach a new policy to an interface
    - **disabled**—Disables collection of policy routing statistics
  - **merge**—Enables merging of multiple policies to form a single policy

**Mode** Interface Configuration
