

Monitoring DHCP Bindings (Displaying DHCP Bindings Based on Binding ID)

Purpose Display binding information for all DHCP clients.

NOTE: This command is deprecated and might be removed completely in a future release. The function provided by this command has been replaced by the **show dhcp binding** command.

Action To display DHCP binding information:

```
host1(config)#show ip dhcp-external binding-id
host1#show ip dhcp-external binding-id
```

```
Dhcp External Binding Ids
-----
Binding Id      Hardware      Giaddr      IpAddress
-----
3053453316     7000.0001.9365  91.3.0.1    91.3.0.2
```

Meaning Table 1 on page 1 lists the **show ip dhcp-external binding-id** command output file

Table 1: show ip dhcp-external binding-id

Field Name	Field Description
Binding Id	DHCP client binding ID option value associated with the user
Hardware	MAC address of the subscriber's computer
Giaddr	Gateway IP address (giaddr) in the DHCP packet received from a client
IpAddress	IP address assigned to the client
