

Using BoD and Basic BoD Services Together to Supply Class of Service

You can use BoD and basic BoD services together to provide more sophisticated bandwidth level management to IT managers. For example, you can integrate these types of services to take advantage of the CoS features available on JUNOS routing platforms.

On the JUNOS routing platform, policers are applied before schedulers. The type of service defined by these settings is applied to traffic exiting from the JUNOS routing platform. For information about policing, scheduling, and queuing traffic on the JUNOS routing platform, see *JUNOS Network Interfaces and Class of Service Configuration Guide*.

If you want to integrate basic BoD services and BoD services, you can base your configuration on the implementation in the sample data. The sample services and data are designed to work with Enterprise Manager Portal and require little configuration.

You can also create a configuration to meet requirements specific to your environment. If you want to create a configuration that has both basic BoD and BoD services, carefully plan services and associated policies. Ensure that the bandwidth requirements for BoD services are in proportion to the bandwidth provided by the basic BoD services. for another way to provide BoD to IT managers.

NOTE: When configuring services to use JUNOS CoS, take into consideration which interfaces on the router support CoS.
